A meeting will be held on Sunday, June 7, probably at Ancon, to discuss plans for the celebration of the Fourth of July. The chairmen of the various committees will probably be selected, and the place for holding the celebration decided on at this meeting. In order to insure the receipt of the fireworks in time, an order has already been placed with the Pain Fireworks Company of New York City. The pyrotechnic display this year will be largely of an aerial nature, set pieces having been left out of the program. The order consists of a quantity of assorted rockets, principally 3 and 4-pound size, with a few of the 6-pound size; assorted bombs, consisting of about 300 Manhattan Beach 9 to 15-inch size, and assorted 9 to 15-inch repeating bombshells, with enough mortars to fire all in about one hour and 30 minutes; enough red and magnesium fire to continue an uninterrupted illumination for about two hours, and a quantity of paper balloons, medium size, without fireworks.

COMMISSARY PRICE REVISION.

Number of Cold Storage Articles Including Meats Advanced for Purposes of Equalization.

Beef has been sold in the past by the commissary for less than it has cost, delivered on the dock at Cristobal. Other fresh meat has been sold at cost delivered on the dock at Cristobal. To maintain the price of meat at this level, other commodities were increased in price.

To avoid discrimination and to fix prices on a more stable basis, an adjustment is being made. Ice, dry goods, hardware, and some articles of groceries, will be reduced in price; and some of the cold storage supplies will be raised. These adjustments will be made as rapidly as possible during the month of June.

The following list of cold storage supplies, containing numerous revised prices, is effective for the week beginning June 4:

FRESH MEATS.		Price.
Mutton—Stewing, per pound.....	8	
Shoulder, trimmed, per pound.....	12	
Leg (8 to 10 pounds), per pound.....	19	
Cutlets, per pound.....	20	
Short cut chops, per pound.....	23	
Shoulder chops, per pound.....	14	
Lamb—Stewing, per pound.....	10	
Shoulder trimmed, per pound.....	15	
Legs (5 to 8 pounds), per pound.....	24	
Chops, per pound.....	29	
Shoulder, chops per pound.....	18	
Cutlets, per pound.....	29	
Veal—Stewing, per pound.....	10	
Shoulder, for roasting (not under 4 pounds), per pound.....	13	
Chops, shoulder, per pound.....	18	
Chops, per pound.....	27	
Loin, for roasting, per pound.....	27	
Cutlets, per pound.....	31	
Beef—Suet, per pound.....	3	
Soup, per pound.....	7	
Stew, per pound.....	11	
Plate, per pound.....	12	
Corned, No. 1, per pound.....	19	
Corned, No. 2, per pound.....	16	
Chuck roast, 3 lbs., and over, per pound.....	15	
Rib roast, second cut (not under 3½ pounds), per pound.....	21	
Rib roast, first cut (not under 3 pounds), per pound.....	24	
Pot roast, per pound.....	25	
Rump roast, per pound.....	25	
Porterhouse roast, per pound.....	27	
Steak, Chuck, per pound.....	16	
Round, top, per pound.....	19	
Round, bottom, per pound.....	17	
Rib, per pound.....	24	
Sirloin, per pound.....	25	
Sirloin, choice cut, per pound.....	28	
Rump, per pound.....	25	
Porterhouse (not less than 1½ pounds), per pound.....	30	
Porterhouse, short, Delmonico, per pound.....	25	
Tenderloin (Western), per pound.....	40	
Pork—Hams, fresh, per pound.....	\$23	
Shoulders, fresh, per pound.....	\$19	
Spare ribs, per pound.....	18	
Backbones, per pound.....	15	
Loin chops or roast, per pound.....	20	
Pigs' feet, each.....	7	
Pigs' heads, whole.....	83	
Pigs' head, ½-head.....	42	
Sausage, homemade, per pound.....	23	
MISCELLANEOUS.		
Livers—Beef, per pound.....	13	
Calif, each.....	62	
Half, each.....	31	
Steak, Hamburger, package.....	17	
Hamburger, 20-pound containers, per pound.....	14	
Sausage—Bologna, per pound.....	13	
Frankfurter, per pound.....	13	
Lieberwurst, per pound.....	13	
Pure pork, 1-lb. carton, per pound.....	18	
Sweetbread, beef, per pound.....	23	
Eggs, fresh, per dozen.....	28	
per ½-dozen.....	14	
Bluefish, per pound.....	09	
Halibut, fresh, per pound.....	05	
Salmon, per pound.....	06	
Shad roes, per pair.....	38	
Oysters, per quart.....	29	
POULTRY AND GAME.		
Chickens—Fancy roasting, milk fed, per pound.....	30	
Fancy roasting, corn fed, per pound.....	27	
Fowls, per pound.....	22	
Fowls, light, per pound.....	23	
Ducks, Western, per pound.....	25	
Capons, per pound.....	39	
Broilers, milk fed, per pound.....	34	
Broilers, corn fed, per pound.....	30	
Turkeys, per pound.....	32	
Squabs, each.....	42	

	Price
Ducks, teal, each.....	40
Partridges, per pair.....	1.30
Grouse, per pair.....	1.30
Pheasants, per pair.....	1.30

CURED AND PICKLED MEATS		
Ham—Real York and Cumberland, per pound.....	43	
Genuine Westphalia, per pound.....	50	
Sugar cured, per pound.....	21	
Sliced, per pound.....	28	
Half, for boiling, per pound.....	23	
Boiled, per pound.....	30	
Hocks, per pound.....	09	
Butt end, about 1½ pounds to butt, per pound.....	11	
Bacon—Breakfast, whole piece, per pound.....	26	
Sliced, per pound.....	27	
Ham, lunch, per pound.....	40	
Pork, salt, family, per pound.....	14	
Ox tongues, each.....	1.00	
Pigs' feet, per pound.....	7	
Tongues, per pound.....	19	

DAIRY PRODUCTS.		
Butter—Creamery, special, per pound.....	35	
Sheffield Farms, extra fancy, per lb.....	54	
Cheese—Philadelphia cream, cake.....	09	
Cheese—Roquefort, per pound.....	35	
Young America, per pound.....	21	
Swiss, per pound.....	27	
Edam, each.....	81	
Edam, tin.....	29	
Parmesan, per pound.....	38	
Gouda, per pound.....	29	
Snappy, per cake.....	9	
Milk (certified), bottle.....	** 24	
Fer-mil-lac, bottle.....	** 25	
Ice cream, quart.....	25	
½-gallon.....	150	
Cream, Sheffield Farms, quart.....	** 33	

VEGETABLES AND FRUITS.		
Beets, per pound.....	4½	
Celery, per head.....	10	
Cabbage, per pound.....	2	
Carrots, per pound.....	3½	
Horseradish, per pound.....	12	
Lettuce, per pound.....	11	
Onions, per pound.....	4½	
Potatoes, white, per pound.....	3	
sweet, tropical, per pound.....	2	
Yams, per pound.....	2½	
Parsley, per bunch.....	2½	
Parsnips, per pound.....	4	
Rhubarb, per pound.....	4	
Turnips, per pound.....	3	
Tomatoes, per pound.....	11	
Spinach, per pound.....	6	
Grape fruit, American, each.....	7	
Tropical each.....	4½	
Lemons, per dozen.....	12	
Oranges, Jamaican, per dozen.....	18	

*Indicates 5 cents allowed for return of bottle.
 †Sold only from commissaries; no orders taken for delivery.
 § Sold only from cold storage and not from commissaries.
 Porterhouse roast includes any cut of hind quarter down to rump, and will not be cut if orders for steak will consume the supply.
 Tenderloins on porterhouse will not be cut and sold separately.
 Not less than ½ ham or ½ shoulder of fresh pork will be sold.
 Purchasers desiring crown roasts will be charged for actual cost of materials used and \$1 extra for labor. When the following is desired: French lamb chops, mutton saddle, tenderloin roast larded, rib roast boned and rolled, a charge of six cents per pound will be made, based on the original weight and actual cost of the materials used in larding.
 Storekeepers will use the "Quantity ordered" column in making up their orders.
 Daily cold storage orders will be filed and kept for at least one month.

CANAL CLUBHOUSES.

GENERAL.

Miss MacLaren's engagement for the season closed at Gatun on June 2, when she gave "The music master." This was her 107th appearance under the auspices of the Canal Zone Y. M. C. A.

Arrangements are under way for an exhibition of motion pictures at the Gamboa stockade.

A new contract has been entered into for motion pictures, whereby the films composing the clubhouse exhibitions will be specially selected each week from a shipment of 70 reels.

Mr. F. B. Shipp, executive secretary of the international committee of the Young Men's Christian Association, was a visitor to the Isthmus on Friday and Saturday, May 29 and 30.

BALBOA.

Twelve members were present at the first lesson of the Spanish class, which was started last Friday night. It is expected that more will join later on. Rates and general information can be procured from the secretary.

The handicap pool tournament was started on Monday night, with 19 entries, as follows: Smith, Young, Davison, Rudolf, Quick, Curtiss, Cone, Bailey, Dent, Ashton, Brugge, Dubendorf, Oustott, Flynn, Mont-

gomery, Hulsebosch, O'Hagan, Ormsby, O'Rourke Williams.

A number of books have been added to the library.

COROZAL.

Motion pictures will be shown at Corozal on Friday, June 5.

The Corozal and Ancon basketball teams played a game on Wednesday, May 27, which resulted in a score of 45 to 6 in favor of the Corozal team. The line-ups were, as follows:

Corozal.	Ancon.
Schaffer.....	F.....N. Morris
Doherty.....	F.....Kaler
Mathues.....	C.....Russell and Stevens
Johnson.....	G.....Wechsler
Plank.....	G.....Poltrino

High scores in bowling during the past week were, as follows: *Duckpins*—Dunlop, 100, 101; Davis, 109, 119, 111; Parkis, 102; Webb, 114; Garrett, 116, 100. *Tenpins*—Davis, 224.

PEDRO MIGUEL.

On Sunday night, June 7, the 6-reel feature film, "From the Manger to the Cross," will be shown, taking the place of the regular song service.

The public school children have been given Saturdays to prepare for the telephone meet to be held on June 19. The boys practice from 9 to 11 a. m., and the girls from 3 to 5 p. m. Considerable interest is being taken by the children in the meet.

A regular nightly brake service will be instituted between Paraiso and the Pedro Miguel clubhouse in the near future. Members will be carried free upon showing their membership card; all others must pay five cents each way. Books of tickets, costing \$1, will be issued, and will be on sale at the clubhouse and probably at the post-office at Paraiso.

The following scores were recorded on the bowling alleys this week: *Tenpins*—Orr, 215, 202; Barte, 209, 204; Beeses, 204; Farrar, 201. *Duckpins*—Whiston, 101. *Rubber bands*—Mrs. Landers, 110, 106.

The first tenpin bowling match held at Pedro Miguel was bowled on the evening of May 28 by teams from Corozal and Pedro Miguel. The latter won two out of three games by the following scores: Pedro Miguel, 638, 760, 794; Corozal, 796, 748, 774.

CULEBRA.

On Sunday night, June 7, a set of slides, with accompanying descriptive lecture, will be shown on the subject, "The birth of the nation." All are invited.

GATUN.

The total attendance at all gymnasium activities for the month of May was 843.

A tenpin tournament has been organized.

The sale of strawberries and cream during the past week gave considerable satisfaction to the bachelor members of the clubhouse.

A new class in Spanish for beginners will be started next week. Señorita LaPeira has succeeded Señora de Hess as instructor. The class fee is \$2 per month.

The entire force of cold employees of the German contracting company for the floating cranes, which is stationed at Gatun, have become members of the local clubhouse.

A large number of the members took advantage of the "Open house" at the clubhouse on Decoration Day. All the games were well patronized.

The Gatun clubhouse invites other clubhouses to send a chess team to Gatun, the same to consist of three or four men.

A matinee social was held for the girls' and boys' gymnasium classes on Friday, May 29.

CRISTOBAL.

Much interest is being manifested in the indoor baseball league. On Tuesday, May 26, the "Doves" defeated the "Yankees" by a score of 31 to 20; on Thursday, May 28, the "Giants" defeated the "White Sox" by a score of 17 to 7. Following is the standing of the league:

Team.	Won.	Lost.	P.C.
Doves.....	1	0	1.000
Giants.....	1	0	1.000
Yankees.....	0	1	.000
White Sox.....	0	1	.000

Two hundred and eighty-seven games were rolled in the all-Isthmian duckpin tournament held on Decoration Day. High score was made by Davis, 128; first, second, and third in singles were made by Weaver, 305; Rodeghiero, 301; Potter, 286. First, second, and third in doubles were made by Henry and Claherty, 614; Davis and Sims, 604; Rodeghiero and Lowande, 587. Scores over 100 were made by Weaver, 118, 112; Lowande, 103, 102; Scheid, 101, 103; Warner, 108; Parker, 108; Davis, 110, 128; Rodeghiero, 104, 109, 108, 109, 124; Sims, 102; Conley, 103, 109; Murray, 102; Gill, 102; C. Sims, 125, 104, 109, 114, 101; Parkis, 102; Claherty, 108; Smith, 111.

Because of conflict in dates, the discussion club meeting was not held on Thursday, May 23. Mr. Weaver will consider "Mexico to date" at the meeting on June 11. The meeting of June 18 will be addressed by Dr. S. T. Darling of Ancon. Dr. Darling will give an account of his recent trip to South Africa, illustrating his address with pictures taken on the trip.

TRANSISTHMIAN DUCT LINE.

Advancing Across Isthmus at Rate of 1,500 Feet per Day—Contracts for Electrical Material.

The actual construction of the transisthmian duct line was started on April 14, at the north end of the Gamboa bridge. It required about two weeks to distribute the plant and organize an efficient working force. The completed duct line is now being extended at an average rate of 1,500 feet per day. At the close of the working day on May 8, 28,550 feet of trench had been excavated, 24,650 feet of base conduit laid, 22,608 feet of backfill concrete placed, 23,759 feet of duct laid, 19,361 feet of earth backfill completed, and 61 manholes installed complete, except covers. At the close of the working day on May 29, 57,200 feet of trench had been excavated; 53,603 feet of base conduit laid; 46,876 feet of backfill concrete placed; 47,303 feet of duct laid; 45,342 feet of earth backfill completed; and 115 manholes installed complete, without covers.

To the morning of June 2, the trench was dug to nearly two miles north of Frijoles, or about $10\frac{3}{4}$ miles from Gamboa. Duct had been laid to the Frijoles station and concreted to a point just south of Frijoles. The duct line was completed, with the exception of the manhole covers, for about nine miles. Tile has been distributed along the right-of-way to within approximately four miles of Gatun.

The general alignment of the duct line is on the outside of the transmission line track-span bridges. The average depth of the excavation is two feet. Five to seven inches of concrete is then laid as a base, and the duct placed on this and set in concrete mortar. The ends of all ducts are wrapped with surveyed cement sacks which are first soaked in a thin mixture of cement and water; this is done in order to insure that nothing gets inside the duct during the placing of the three inches of concrete backfill on the sides and top.

Manholes are cast in the field with collapsible forms. The regular spacing of manholes is 776.42 feet, but intermediate manholes are installed in order to get the proper alignment when building the duct around curves. Special manholes are installed at all signal locations in order to save wire and future labor when connecting the signal system to the duct line cable.

A train crew has been assigned to the telephone and signal department of the Panama railroad, which is building the duct line, in order to distribute material and move the plant forward; this crew also hauls the force to and from the work each day in labor cars.

The force consists of seven gold men and a force of silver employes ranging from 375 to 425 men. The nature of this work is such that the force is scattered over 7,000 feet of territory each day.

AWARDS FOR ELECTRICAL MATERIAL.

Award has been made to the Western Electric Company of New York City for the duplex telegraph and telephone cable for the duct line, and the miscellaneous material required for its installation. The principal items are, as follows:

1. Three hundred and thirty pieces of telegraph and telephone cable, each piece 782 feet long, or a total of 258,060 feet. Each cable length is to contain 50 pairs of wires, made up of 38 pairs of No. 16 B. and S. gage quadrads, and 12 pairs of No. 19 B. and S. gage in pairs.

The No. 16 cable is to have an average mutual electrostatic capacity of not to exceed .074 microfarad per mile, and an insulation resistance of not less than 500 megohms per mile. The No. 19 cable is to have an average mutual electrostatic capacity of not to exceed .074 microfarad per mile, an average ground capacity of not to exceed .111 microfarad per mile, and an insulation resistance of not less than 500 megohms per mile. Delivery of the first 30,000 feet of the order is to be made within 85 days from receipt of notice of award, the remainder to be delivered at the rate of 30,000 feet each succeeding interval of eight working days. The contract price is \$0.402 per foot, or a total of \$103,740.12.

2. Thirty No. 2 capacity loading coil cases, equipped with 18 No. 530 coils, and 48 No. 515 coils, each case to be equipped with 10 feet of cable stubs. Four cases are to be delivered at Colon within 95 days, and the remainder at the rate of four cases each succeeding interval of eight working days. Contract price, \$975 per case, or a total of \$29,250.

3. Four hundred and sixty feet of single armored cable, to contain the same number of pairs as in Item 1, delivery to be made at Colon within 95 days of receipt of notice of award. Contract price, \$1.057 per foot, or a total of \$486.22. This cable is required for the bridge crossing the Gatun River at Monte Lirio.

4. Two thousand three hundred feet of single armored cable containing the same number of pairs as in Item 1, delivery to be made at Colon within 95 days of receipt of notice of award. Contract price, \$1.057 per foot, or a total of \$2,431.10. This cable is required for the Gamboa bridge crossing.

5. Two thousand feet of 25-pair cable, No. 19 B. and S. gage, at \$0.108 per foot, or a total of \$216, delivery to be made within 85 days. This cable is to be used in tapping the main line for cut-ins.

6. Miscellaneous supplies for installing the above cable, consisting of paper sleeves, paraffine, tape, pothead compound, etc., aggregating in value \$842.12.

The following cable purchases have been made of the Kerite Insulated Wire and Cable Company, New York City, for use in the installation of the Panama railroad's signal circuits in the duct line system:

1. Ninety pieces of cable, each 2,338 feet in length, or a total of 210,420 feet, No. 12 B. and S. gage, with 13 solid conductors, and 20 pieces cable, each 2,338 feet in length, or a total of 46,760 feet, No. 21 B. and S. gage, with nine solid conductors. Contract price, \$100,152.90.

2. Four hundred and sixty feet of armored cable, 13-conductor, No. 12 B. and S. gage, at \$1.05 per foot, or a total of \$483, for carrying the signal wires across the Gatun River at Monte Lirio.

3. Two thousand three hundred feet of armored cable, same as above, at a total cost of \$2,415, for use in carrying the signal circuits across the Gamboa bridge. One reel of this cable has already been received.

The contract for the vitrified clay duct was awarded to Walter S. Dickey of Kansas City at a unit price of \$0.0579 per duct foot; this consisted of 1,060,000 duct feet of 4-way multiple salt glazed conduit with $3\frac{1}{4}$ -inch by $3\frac{1}{4}$ -inch duct openings, and in lengths of 36 inches, and 4,000 duct feet of split duct made in the same size and under the same specifications. The total cost of duct and dowel pins

was \$61,605.60. Over 80 per cent of this order has been delivered.

It is estimated the total cost of duct line and cables, installed complete, will be \$450,000.

Appointments of Pilots for the Canal.

The following have been appointed pilots under the Division of Operation of the Canal: John Constantine and Ralph Osborn, former Panama railroad pilots, who are stationed at the Atlantic entrance; Charles Svensson, mate on the tug *Empire*, and Frank W. Corning, captain of the tug *Miraflores*, former employes of the Dredging Division, now stationed at the Pacific entrance; Neil Langvardt, captain of the tug *Miraflores*, and John Wieshofer, mate on the dredge *Caribbean*, transferred from the Dredging Division, now familiarizing themselves with the Lake section of the Canal by making trips with the tug *Mariner* and tows. The appointments of Ludwig A. Helliksen, captain of the dredge *Culebra*, and Alvin W. Haynes, first officer on the steamship *Colon* of the Panama Railroad Steamship Line, have been authorized; both men are in the United States but will return to the Isthmus for duty within a short time.

Stolen Dynamite Recovered.

The remainder of the dynamite stolen from the *Mindi* magazine in the night of May 14-15 was recovered by the Canal Zone police on May 21 at house No. 236 "D" street, Colon. Fifty pounds, left beside the Gatun-Mount Hope road, had been recovered on May 15. The dynamite was found partly packed in a sugar barrel and a trunk, and the remainder was piled on the floor, under a covering of sacks. The other rooms of the house were occupied by families. Francisco Romero and Manuel Contreras, Colombians, and Charles Cohen, black Jamaican, were arrested on a charge of grand larceny, and lodged in the Cristobal jail. They were given a preliminary hearing at the magistrate's court at Cristobal on May 25 and bound over for trial by the District Court.

Licenses for Sale of Merchandise Not to Be Issued for Empire and Culebra Districts after July 1.

In line with the plan of depopulating the Canal Zone, it has been directed that no licenses for the sale of merchandise will be issued in the towns of Culebra and Empire from and after July 1, 1914. No license is required for the sale of groceries and food supplies. The Executive Secretary has forwarded letters to 62 merchants in Empire, New Empire, Rio Grande, Culebra, New Culebra, and Golden Green, advising them of this ruling and that the sale of any merchandise other than foodstuffs, on and after July 1, 1914, will be unlawful.

Free Earth for Sanitary Fills in Panama.

In connection with the work of requiring buildings in the city of Panama to be placed in a sanitary condition, arrangements have been made by which The Panama Canal will furnish earth from Diablo Hill for property owners to use in making fills. The earth is delivered free at the Panama railroad yard, from which it is to be hauled and placed at the expense of the property owner.

The two lists of applications for family quarters at Ancon and Balboa will be merged in the same manner as the lists for Paraiso-Pedro Miguel and Cristobal-Colon.

OFFICIAL CIRCULARS.

Rates of Pay, Silver Roll.

THE PANAMA CANAL,
EXECUTIVE OFFICE,

CULEBRA, C. Z., May 13, 1914.

CIRCULAR No. 666-Revised:

1. Effective June 1, 1914, all employees on the silver roll of The Panama Canal or Panama Railroad Company shall be rated as hereinafter shown. These ratings and rates of pay have been prepared with a view to limiting the maximum pay that can be given to this class of help, without the necessity of obtaining prior authority, and to eliminating, so far as possible, all unnecessary ratings. It is also desired to establish a uniform rate of pay for work of a similar nature in different departments and divisions.

2. An employee's rating shall in all cases correspond with his duties. Where it is considered desirable to pay a higher rate or to use a different rating than shown, each case should be taken up separately and authority secured to use the higher rate of pay or different rating. It is thought that the ratings and rates of pay hereinafter shown will be sufficient to meet all ordinary requirements, and no changes should be requested unless absolutely necessary, in order to make the employee's pay commensurate with the work done, or to make the rating correspond with the duties performed.

3. A new employment shall not be made at a higher rate of pay than that authorized as the maximum entrance salary for the class of work to be performed, without special approval from the Governor. Unless otherwise specified, the maximum entrance salary shall be the lowest rate of pay given under the authorized ratings, and roll timekeepers must see that new employees are not started at higher rates unless special authority has been obtained. However, an employee may be regularly transferred from one department, division, or gang to another without reduction, and an employee, absent for not more than 30 days, with the prior consent of competent authority in his department or division, or an employee discharged on account of reduction of force or lack of work, may be reinstated, within 60 days, at his former rate of pay.

4. If a silver employee is discharged for unsatisfactory service or misconduct, with no objections to reemployment, he may be reemployed only at a lower rate of pay than that previously received and may not be promoted to his old rate under six months; if he quits voluntarily, with no objections to reemployment, he may be reemployed only at a lower rate of pay than previously received and may not be promoted to his old rate under two months.

5. All employees leaving the service or transferring from one department, division, or gang to another, with the exception of Boys A, Laborers A, and Laborers B will be furnished with "Silver employees' service slip," form No. PC 262-2, properly filled out.

6. Office timekeepers will see that no employee is carried on the rolls who does not comply with these rules.

7. The maximum monthly rate of pay for silver employees shall be \$60 U. S. currency, except where special authority has been granted, as provided in Paragraph 21, to pay a higher rate. The monthly silver rates of pay are intended for those employees whose hours of work are more or less irregular, or whose time it would be difficult to check up on an hourly basis. The rate of pay per month shall not exceed the pay which would be received for the number of hours worked at the hourly rate of pay established for the same class of work. Whenever practicable, an hourly rate should be applied in preference to a monthly rate. The following table shows the corresponding monthly amount, at the different standard hourly rates of pay, based on eight, nine, 10, and 12 hours work per day:

STANDARD RATES OF PAY.
(U. S. CURRENCY.)

	8 hours daily, 204 hours per month.	9 hours daily, 230 hours per month.	10 hours daily, 255 hours per month.	12 hours daily, 306 hours per month.
5 cents.....	\$10.20	\$11.50	\$12.75	\$15.30
7 cents.....	14.28	16.10	17.85	21.42
10 cents.....	20.40	23.00	25.50	30.60
12 cents.....	24.48	27.60	30.60	36.72
15 cents.....	30.60	34.50	38.25	45.90
16 cents.....	32.64	36.80	40.80	48.96
18 cents.....	36.72	41.40	45.90	55.08
22 cents.....	44.88	50.60	56.10	67.32

8. Unless otherwise specified, employees will be required to serve at least three months before being promoted to a higher grade. Promotions shall always be made to the next higher grade.

9. In all time books, and on all pay rolls, the designations used will be Laborer A, Laborer B, Laborer C, Helper, Artisan A, Artisan B, or Artisan C, as the case may be. The term "Artisan" will cover the various vocations as shown under this heading.

10. When necessary to change the rate of pay of an employee to make it agree with the rates given hereinafter, the next lower rate should be used; provided, however, that promotion may be made to the next higher author-

ized rate in exceptionally meritorious cases. Report to me immediately the promotions made under this grant, with reasons therefor.

11. The standard hourly rates of pay for silver employees shall be five cents, seven cents, 10 cents, 12 cents, 15 cents, 16 cents, 18 cents, and 22 cents, U. S. currency. The duties to be performed under each grade are, as follows:

12. *Boy A—Five cents per hour*—This is the entrance rate of pay for all boys (including water, shop, and messenger). They may be promoted to Boy B, at seven cents per hour, after six months' satisfactory service.

13. *Boy B—Seven cents per hour*—This rate can be used as the entrance rate only in cases where prior authority has been obtained from the Governor's office, and for well developed boys of 16 years of age or over.

14. *Laborer A—Ten cents per hour*—This will cover all common labor, except as hereinafter specifically authorized.

15. *Laborer B—Thirteen cents per hour*—This is a special rate and can be used only where the work is especially difficult, extra hazardous, or particularly disagreeable, as work that requires the men to be in mud continuously, caisson work, cleaning sewers, etc. Prior authority must be obtained in each case where it is considered necessary to use this rate, and a statement should be furnished showing the nature of the work to be performed and the approximate length of time that this class of labor will be required. It will also be the entrance rate for white labor.

16. *Laborer C—Sixteen cents per hour*—Only white labor is included in this class. Whenever it becomes necessary to employ laborers, it is desired that colored labor, at 10 cents per hour, be used whenever and wherever practicable.

17. *Helper—Twelve cents per hour*—This rating can be applied only to those performing the duties of helpers to shop or other mechanics, such as machinist, car repairer; carpenter, plumber, etc.

18. *Artisan A—Fifteen cents per hour*—Those employees performing the duties of shop, building construction, and other mechanics and artisans shall be given this rating. It is the standard rate of pay for this class of help and shall be the maximum entrance rate for artisans. This designation covers employees performing the following services:

Blacksmith, boilermaker, cable splicer, carpenter, car repairer, calker, cement finisher, coppersmith, drill runner, ironworker, lineman, machinist, mason, molder, painter, pipefitter, pressman, planing mill hand, plumber, riveter, upholsterer, wireman.

19. *Artisan B—Eighteen cents per hour*—Artisans can receive this rate only after demonstrating that the quantity and quality of their work is such as would, in the opinion of the foreman in charge, entitle them to a higher rate than Artisan A. Promotion shall not be made in any case until after six months' satisfactory service. This designation covers employees performing the same services as under Artisan A.

20. *Artisan C—Twenty-two cents per hour*—This rate of pay shall be given only to those artisans whose services are particularly satisfactory, and who show an especial fitness for the work performed. Under no circumstances shall an employee be given this rate of pay until he has served at least one year in the lower grades. This designation covers employees performing the same services as under Artisan A.

21. The rates marked with a star (*) in the lists below are special, and will be eliminated as fast as practicable. Employees receiving these rates as of May 1, 1914, may be continued without change if necessary for the good of the service, but no further promotions to these rates may be made without my approval. The few employees now receiving pay in excess of these special rates shall be reduced to the nearest regular or special rate applicable.

MONTHLY PAY EQUIVALENT TO DIFFERENT HOURLY
RATES. SUNDAYS NOT INCLUDED.

8 hours daily, 204 hours per month.	9 hours daily, 230 hours per month.	10 hours daily, 255 hours per month.	12 hours daily, 306 hours per month.

DESIGNATIONS AND RATES OF PAY.

HOURLY RATES.

Artisan, A, 15; B, 18; C, 22 cents per hour.

(NOTE—For explanation of duties to be performed under this designation, see Paragraphs Nos. 17, 18, and 19.)

Bookbinder, 25 cents per hour.

Boy, A, five; B, seven cents per hour.

(NOTE—See Paragraphs Nos. 12 and 13.)

Bricklayer, 25 and 30 cents per hour.

(NOTE—European workmen only.)

Caissonman (for work at top of caisson), 13 cents per hour.

Caissonman (for work in caisson), 16 cents per hour.

Carpenter, 16, 20, and 25 cents per hour.

(NOTE—Only for carpenters in traveling gangs of Supply Department. Rate to be discontinued October 1, 1914.)

Cementman, 13 cents per hour.

(NOTE—This rate shall apply only to men handling dry cement in cars and cement sheds.)

Checker, 16 and 20 cents per hour.

Compositor, 20 and 25 cents per hour.

Concrete man, 13 cents per hour.

(NOTE—This rate shall apply only to men handling concrete material to mixers and to men placing concrete in forms.)

Diver, 20, *25, and 44 cents per hour.

(NOTE—25 cent rate for piling work.)

Helper, 12 cents per hour.

(NOTE—For explanation of duties to be performed under this designation, see paragraph No. 17.)

Ironworker, *25 cents per hour.

(NOTE—For extra skillful men working aloft.)

Laborer, A, 10; B, 13; C, 16 cents per hour.

(NOTE—For explanation of different grades, see paragraphs Nos. 14, 15, and 16.)

Laundress, eight, nine, and 10 cents per hour.

Laundryman, 10, 12, 15, 18, and 22 cents per hour.

Nozzle man, 16, 18, and 20 cents per hour.

Operator (crane), 16, 20, and *25 cents per hour.

Packer (female), seven cents per hour.

Paper cutter, 20 cents per hour.

Paver, 13 cents per hour.

Pitman, 13 cents per hour.

Powder helper, 13 cents per hour.

Powderman (men loading holes), 13 and 16 cents per hour.

Printer, *25 cents per hour.

(NOTE—For special classes of work and extra skillful men only.)

Rigger, 13 cents per hour.

Riveter, *25 cents per hour.

(NOTE—Extra skillful men working aloft.)

Rubber stamp maker, 25 cents per hour.

Shoemaker, 16 cents per hour.

Scytheman, 13 cents per hour.

Switchtender, 13 cents per hour.

(NOTE—Panama railroad main line only.)

Tunnelman, *25 cents per hour.

(NOTE—Hazardous work in tunnels.)

MONTHLY RATES.

Attendant, \$15, \$20, \$25, \$30, \$40, \$45.

(NOTE—The rate of \$40 is exclusively for morgue attendants and the rate of \$45 is exclusively for operating room attendants, laboratory attendants working in filtration plants, and one at Palo Seco.)

Baker, \$37.50, \$50, \$75.

Barber, \$25.

Blacksmith, \$40, \$50.

(NOTE—For corral work.)

Boatman, \$25, \$30, \$37.50.

(NOTE—This rating is for crews of cayucas and row-boats only.)

Boatswain, \$45, \$55.

Boy, \$10, \$12.50, \$15.

(NOTE—Water boys and shop boys shall be employed at hourly rates only. Cabin boys and mess boys shall be rated as waiters.)

Butcher, \$40, \$50.

Cablesplicer, \$60, \$75.

Captain: dredge, \$100; claret, \$85; steam launch, \$75.

(NOTE—Masters will be known and rated as captains; ratings above \$75 per month are for white employees only.)

Carpenter, \$45.

(NOTE—Floating equipment only.)

Carpenter, \$60.

(NOTE—Seagoing dredges only.)

Cartman, \$30, \$35.

Cemeteryman, \$32.50.

Chainman, \$30, \$37.50.

Chainman-foreman, \$45, \$50.

Checker, \$30, \$35, \$40.

Clerk, \$30, \$35, \$40, \$45, \$50, \$60, *\$75.

Coachman, *\$75.

Coalman, \$30.

Coalpasser, \$40.

(NOTE—Coalpassers shall be employed only on sea-going dredges.)

Cook, \$20, \$25, \$30, \$35, \$40, \$45, \$50, \$60, \$75.

(NOTE—The maximum entrance rate for cook on marine equipment in the Dredging Division is \$40. In all other cases, the maximum entrance rate shall be \$25.)

Dairyman, \$25, \$30.

Engineer:

Marine (dredge), \$67.50, \$75.

Marine (claret), \$65, \$75.

(steam launch), \$75.

Steam, \$30, \$35, \$40, \$45, \$50, \$55, \$60, *\$75.

(NOTE—\$75 rate for steam roller only.)

Farrier, \$40, \$50.

Fireman, \$25, \$30, \$35, \$40, \$45, \$50, \$60.

(NOTE—The maximum entrance salary for fireman on dredges, tugs, and clarets shall be \$45; for fireman at the

Cristobal power plant, \$40; and for standard gage loco motives, \$35.)

Foreman, \$25, \$30, \$35, \$40, \$45, \$50, \$60, *\$75.

(NOTE—The maximum entrance rate for white foreman shall be \$50. A flat rate of \$50 entrance and maximum is allowed for dock foremen.)

Gardener, \$30.

Helper, \$10, \$12.50, \$15, \$17.50, \$20, \$25.

(NOTE—The designation "Helper" will apply to cooks' helpers, kitchen helpers, scullions, scrubbers, and other employes performing helpers' duties for which distinct designations are not provided.)

Hostler, \$25, \$30, \$35, \$40, *\$50.

Janitor, \$17.50, \$20, \$25, \$30.

Janitor, head, \$37.50.

Keeper, \$75, \$60.

Assistant, \$60, \$42.50.

Laundress, \$15, \$17.50, \$20, \$22.50, \$25, \$30, \$35.

Laundryman, \$25, \$30, \$35, \$40, \$45, \$50.

Leverman, \$42.50.

(NOTE—Panama railroad.)

Luggerman, \$25, \$30, \$35, \$40, \$45.

(NOTE—The rating of luggerman shall be confined to men handling ice, meat, and other cold storage supplies.)

Maid, \$12, \$15.

(NOTE—The \$15 rate shall be confined to maids at the Ancon insane asylum and the quarantine station on Culebra Island.)

Mate; dredge, \$80; claret, \$75.

Messenger, \$17.50, \$20, \$25, \$30, \$35, \$40.

(NOTE—The maximum entrance rate for messengers shall be \$25.)

Money counter, \$50, *\$65, *\$75.

Oil, \$30, \$35, \$40, \$45, \$50, \$55.

(NOTE—On dredges, tugs, and clapets, oilers may be appointed at a maximum entrance salary of \$50. The \$55 rate shall be confined to oilers on seagoing dredges, pipeline dredges, and tugs; the \$50 rate shall be confined to oilers on other marine equipment. The maximum rate for oilers on land shall be \$45.)

Operator:

Motor boat, \$30, \$35, \$40, \$45, \$50, \$55, \$60, *\$75.

Filter, \$50.

Telephone, \$30.

Pump, \$50.

(NOTE—The rating for operator (pump) at \$50 shall be confined to employes in pumpstations where there is no white supervision.)

Patrolman, \$35, \$40, \$50.

Policeman, \$40, \$45, \$50.

Saddler, \$30, \$40, \$50.

Salesman, \$30, \$35, \$40, \$45.

Scavenger, \$32.50.

Seaman, \$30, \$35, \$40, \$55.

(NOTE—The \$55 rate for seaman is not allowed if subsistence is furnished.)

Stableman, \$30.

Steward, \$37.50, \$50, \$62.50, \$75.

Storeman, \$25, \$30, \$37.50, \$42.50, \$50.

(NOTE—The \$42.50 rate is for commissaries only.)

Teacher, \$50, \$60.

(Palo Seco), \$5.

Teamster, \$35, \$40.

Trainman, \$30, \$35, *\$40.

(NOTE—The \$40 rate is for porter and special policeman, P. R. R.)

Waiter, \$15, \$17.50, \$20.

Waiter, head, \$25, \$30, \$37.50.

Watchman, \$20, \$25, \$30, \$37.50.

Watertender, \$55.

Wheelwright, \$50.

Winchman, \$50, \$55.

Wrecker, \$30, \$35, \$50, *\$60.

(NOTE—The \$50 rate for wrecker shall be confined to white employes.)

*Special—See Paragraph 21.

GEO. W. GOETHALS,

Governor.

Steamboat Inspection Service.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., May 1, 1914.

CIRCULAR No. 644:

Rules and Regulations in relation to the Board of Local Inspectors, The Panama Canal, including the inspection of steam and other vessels, and matters relating to the issuance of licenses for officers of vessels and others.

1. These rules and regulations in reference to the Board of Local Inspectors, and its duties, have been compiled in accordance with the various laws, orders, and ordinances in relation thereto.

2. The Governor of The Panama Canal, may, from time to time, establish such other rules and regulations as he may see fit, in relation to the inspection of vessels or any of the other duties of the Board of Local Inspectors, and may modify or nullify any of the existing rules, provided that it be not contrary to law. Due notice will be given of any such changes or modifications.

ORGANIZATION AND JURISDICTION OF BOARD.

3. The Board of Local Inspectors shall consist of three members appointed by the Governor, two of whom shall have the necessary qualifications to entitle them to hold a master's certificate, and the remaining member an engineer's certificate, all for unlimited tonnage.

4. The members of the board shall be employes of The Panama Canal or the Panama Railroad Company.

5. There shall be a recorder of the board whose duty shall be to keep a record of its proceedings; of all applications for licenses; of those issued, refused, suspended, extended, or modified, together with the name, grade, date, and serial number of all such licenses; and of all casualties, collisions, foundering, sinkings, fires, and other disasters or matters of interest that may come before the board. Under the direction of the Chairman, he shall prepare, submit, and register all licenses and certificates of inspection, and the reports hereinafter mentioned.

6. The board shall have supervision over the application, examination, classification, and recommendation for the issuance of all licenses and modifications thereof for masters, mates, pilots, and engineers of steam vessels, all other vessels propelled by machinery, and sailing vessels upon the waters under the jurisdiction of the Canal Zone; for navigators of motor boats upon the said waters; and for chauffeurs within the said Zone.

7. Upon recommendation in writing, the Superintendent of Transportation shall issue such licenses as may be recommended by the board.

8. It shall have jurisdiction over the inspection of all vessels navigating the waters of the Canal Zone, except public vessels of the United States and other countries; such inspection shall include hulls, boilers, machinery, appliances, and equipment of every kind; this jurisdiction extends to the inspection of all floating plant belonging to The Panama Canal and the Panama Railroad Company, except the steamers of the latter company, which are regularly inspected and licensed by the inspectors at the home port of the steamers in the United States.

9. It shall investigate and report to the Governor, through the Superintendent of Transportation, all marine accidents, and casualties of interest affecting vessels in Canal waters; in order to make such investigations thorough and complete, for the purpose of making investigations in regard to licenses, and for any other reason relating to matters coming under its jurisdiction, the board is authorized to summons such witnesses to appear before it as it may see fit.

10. The board shall meet at stated intervals and shall give due notice of such meeting to any candidate who may desire to appear before it.

11. The board may convene, however, at any other time, upon summons of the chairman to do so; the presence of two members shall constitute a quorum.

12. Each member is authorized to administer such oaths as may be necessary for conducting the business of the board.

REPORTS BY THE BOARD.

13. The Board of Local Inspectors shall keep a record

of its proceedings, and at the end of each fiscal year, make a report to the Governor of The Panama Canal, of the number of licenses issued in each grade and class, stating in each case the name, grade, date, and serial number of the license; of all licenses revoked, suspended, extended, modified, or refused; of all casualties, collisions, foundering, sinkings, fires, or other disasters or matters of interest; or any information or recommendations in reference to anything pertaining to the duties of the board.

14. The board shall also report monthly to the Governor the names of all applicants for licenses, together with the grade, date, serial number of licenses issued; or, if refused, the reason therefor; all modifications or renewals of licenses previously issued, with explanatory remarks whenever necessary; and any other matters of interest in relation thereto.

15. This monthly report must be submitted by the fifth day of the following month.

16. In case of serious accident or casualties, as previously mentioned, or any matters of importance, the board shall make an immediate investigation and report the result to the Governor at once.

17. All reports to the Governor shall be made in duplicate and forwarded through the Superintendent of Transportation, who will place such endorsements thereon as he may see fit, retain one copy, and forward the other.

APPRAISALS.

18. In addition to the duties hereinbefore mentioned in relation to the inspection of vessels and the issuance of licenses, the Board of Local Inspectors and the surveying officer will be charged with the appraisal of all of the floating equipment of the Canal and the Panama Railroad Company whenever any part of such plant is to be transferred from one department or division to another; in general, the price at which it is to be transferred will be based upon a depreciation of 15 per cent per annum on the original cost, including any extraordinary repairs or improvements that may have been made thereto; but this shall not be interpreted to prevent the local board and the surveying officer from making such modifications in this estimate as the occasion may demand.

19. This appraisal refers particularly to transfer only, but before any such floating equipment be sold, the Board of Local Inspectors alone shall make a reappraisal on the basis of its actual value at the time of such sale.

INSPECTION AND EQUIPMENT OF STEAM VESSELS.

20. *Vessels to be inspected*—Every vessel propelled in whole or in part by machinery shall be deemed a steam vessel within the meaning of these rules, and all vessels navigating the waters of the Canal Zone, except public vessels of the United States and other countries, and the steamships of the Panama Railroad Company, shall be subject to the provisions thereof.

21. *Hulls*—The Board of Local Inspectors shall cause the hull of each steam vessel navigating the waters of the Canal Zone to be carefully inspected at least once every year, and shall satisfy themselves that every such vessel, so inspected, is of a suitable structure for the service in which she is to be employed, and has suitable accommodations for passengers and crew, and is in a condition to warrant the belief that she may be used in navigation with safety to life, and that all of the requirements of law in regard to fire, boats, pumps, hose, life preservers, floats, signals, and other things are faithfully complied with, and if they deem it expedient they may cause the vessel to be put in motion and adopt any other suitable means to test her efficiency and that of her equipment.

22. *Equipment*—Whenever the board shall find on board any vessel subject to the provisions of these rules, any equipment, machinery, apparatus, or appliance which does not conform to the requirements of the law, it shall require the same to be placed in proper condition by the owner or master of the vessel, and if the said board shall find in any such vessel any life preserver or fire hose so defective as to be incapable of repair, it shall require the same to be destroyed in the presence of some person appointed by the board to represent it.

23. *Boilers*—The board shall cause the boilers and all appurtenances of steam vessels to be carefully inspected before the same shall be used, and at least once every year thereafter, and shall subject all boilers to the hydrostatic test in the ratio of 150 pounds to the square inch to 100 pounds to the square inch of the working steam power allowed.

24. All steam vessels shall be required to have their boilers well made, of good and suitable material, design suitable for the service in which employed, and to be equipped with the proper safety appliances, and of such construction, shape, condition, arrangement, and material that they may be safely employed in the service proposed without peril to life; and the board shall cause an examination to be made to satisfy itself that the requirements of these regulations have been complied with.

25. *Certification*—When the inspection of a steam

vessel shall have been completed and the board approves the vessel and her equipment, the chairman of the board shall make and subscribe to the Collector a certificate in accordance with the form to be prescribed by the board. Every certificate granted to steamers carrying passengers shall state the number of passengers of each class for which any such steamer has accommodations and can carry with prudence and safety.

26. If the board refuses to grant a certificate of approval, the chairman thereof shall make a statement in writing and give his reasons for such disapproval, and shall sign the statement as such chairman, and file the same in the records of the board, giving a copy thereof to the owner or master of the vessel.

27. *Foreign vessels*—All foreign private steam vessels carrying passengers to or from any port or place within the limits of the Canal Zone shall be subject to the provisions of these rules: *Provided*, that if any foreign passenger steamer of a country which has inspection laws approximating those of the United States has an unexpired certificate of inspection duly issued by the authorities of the country to which the vessel belongs, the said vessel shall not be subject to an inspection other than that necessary to satisfy the board that the condition of the vessel, her boilers, and life saving equipment are as stated in her certificate of inspection, but no such certificate of inspection shall be accepted as evidence of lawful inspection unless like privileges are granted to steam vessels of the United States under the laws of the country to which such vessels belong.

28. *Private vessels*—Private vessels duly registered in the United States, having unexpired certificates of inspection issued by the proper authorities in the United States, shall not be subject to inspection hereunder.

29. *Certificates*—The Collector shall retain on file all of the original certificates of inspection required to be delivered to him by the board and shall give to the master or owner of the vessel therein named three certified copies thereof, two of which shall be placed by such master or owner in a conspicuous place in the vessel where they will be most likely to be observed by passengers and others, and there be kept at all times framed under glass; and the other shall be retained by such master or owner as evidence of the authority thereby conferred.

30. *Fees*—Before issuing an inspection certificate to any vessel, the Collector shall demand and receive from the master or owner of such vessel the following compensation for inspection and examination made for the year, in addition to any fees for issuing enrollments and licenses now, or which may hereafter be, allowed by law:

For each steam vessel under 15 gross tons.....	\$5.00
For each steam vessel over 15 gross tons and not exceeding 100 gross tons.....	10.00
For each and every gross ton in excess of 100 gross tons.....	.05

The fees herein provided for shall cover the cost of the certificate, as well as the cost of inspection and examination of the vessel, and shall be used for the benefit of The Panama Canal.

31. *Certificates to be exhibited*—Whenever a passenger is received on board of any steam vessel not having the certified copies of the certificate of approval placed and kept as required by these rules, such vessel shall be liable to a fine of \$100 for each passenger received, to be so recovered in any competent court in which the vessel may be found, and the money so recovered shall be a lien upon the vessel, which may be seized and sold to satisfy the same, as well as all costs of the proceedings.

32. *Officers*—No steamer carrying passengers shall depart from any port or place in the Canal Zone unless it shall have in its service a full complement of licensed officers and a full crew, which, in the judgment of the board, may be sufficient at all times to manage the vessel.

33. No certificate will be granted to a steamer carrying passengers to a home or foreign port unless the said steamer carries a licensed master, first and second mates, and a chief engineer and assistant.

34. *Life saving apparatus*—Every vessel licensed under the provisions of these rules shall have on board in an accessible place one life preserver for every person allowed to be carried, in addition to those provided for the crew of such vessel; and if a greater number of passengers than is stated in the certificate be taken on board of any vessel within the waters of the Canal Zone, the master or owner of such vessel shall be liable to any person suing for the same to refund the passage money and \$10 for each passenger beyond the number allowed.

35. If any passenger steamer engages in excursions within or from the waters of the Canal Zone, the board shall issue to such steamer a special permit in writing for the occasion, in which shall be stated the additional number of passengers that may be carried and the number and kind of life saving appliances that must be provided for the safety of such additional passengers, and it shall also, in its discretion, limit the route and distance of such excursions.

36. *List of passengers*—The master of every passenger steamer shall keep a correct list of all passengers re-

ceived on board the vessel, which record shall be kept open to the inspection of the inspectors and the officers of the customs at all times, and the correct number of passengers shall be furnished to the Inspectors as often as called for.

37. Every master of a passenger steamer who fails through negligence or design to keep a list of passengers as required by the preceding section, shall be liable to a fine of \$100, to be recovered in a competent court in which the vessel may be found.

38. *Certain persons excluded from pilot house*—Masters and pilots of steamers carrying passengers for hire, or otherwise, shall exclude from the pilot house and navigating bridge of such steamers, all persons, except officers of the inspection service: *Provided*, That licensed officers of steamers, persons regularly engaged in learning the profession of pilot, officers of the United States Navy, United States Coast and Geodetic Survey and Lighthouse Service, and engineer officers connected with the improvement of rivers or harbors, or The Panama Canal, may be allowed in the pilot house or upon the navigating bridge, upon the responsibility of the officer in charge. No one shall be allowed in the pilot house of ferry steamers, except the crew on duty there, or the Board of Local Inspectors.

39. *Notices to be kept posted*—The master of every steamer shall keep three printed copies of this notice posted in conspicuous places on the vessel, one of which shall be kept posted in the pilot house. Copies of these rules can be obtained on application to the Board of Local Inspectors.

40. *Fire apparatus*—Every steam vessel carrying passengers shall be provided with two good, double acting fire pumps which may be worked by hand; each chamber of these pumps shall have a capacity of not less than 100 cubic inches, and they shall be placed in the most suitable part of the vessel for efficient service; and each be supplied with a suitable, well-fitted hose equal in length to one-half that of said ship, such hose to be in good condition, coupled to the pumps, and stowed on a reel, or in such other manner that it may be instantly let out in case of fire or necessity. Steamers of less than 200 tons burden are required to have only one such pump and fittings.

41. All steam vessels shall have double acting steam fire pumps or their equivalents, according to their tonnage, as follows:

Vessels over 20 gross tons, but not over 150 tons, at least 40 cubic inches pump cylinder capacity.

Vessels over 150 gross tons, but not over 3,000 tons, at least 1-cubic inch pump cylinder capacity for each gross ton.

Vessels of 3,000 gross tons and over, at least 700 cubic inches pump cylinder capacity.

42. Each fire pump shall be supplied with water by a suitable pipe connection passing through the side of the vessel so low as to be under water at all times, and no fire pump thus provided shall be placed below the lower deck of the vessel. Every steamer shall also be provided with a pump which shall be of sufficient strength and suitably arranged to test the boilers thereof.

43. Sufficient fire mains shall be led from the pumps to all decks; at the outlets thereof, suitable hose, in good condition, shall be provided, so that every part of the vessel may be reached with a full stream.

44. All piping, valves, engines, and the accessories to the same, as well as accessories to the boilers, and the provisions of lights, anchors, and the like, and arrangements for use of same, shall be such as to insure efficiency and safety. In order to test the efficiency of the vessel in all or any respect, and the efficiency of the equipment, the Board of Local Inspectors may cause the vessel to be put in motion, and may adopt any other suitable means. Thus the performance of fire or boat drill may be required, and practice of the same is enjoined upon masters.

45. *Speaking tube*—In addition to gong or other signals between pilot house and engine room, there must be provided an efficiency speaking tube or telephone service; gong signals shall be audible in the pilot house, as well as the engine room.

46. Extra steering apparatus of satisfactory character must be carried by every steamer of over 15 gross tons.

47. *Lifeboats and rafts*—Every vessel coming within the provisions of these rules shall be provided with such number of lifeboats, floats, rafts, and best means of propelling them, line-carrying projectiles, lights, drags, anchors, and with other equipment, as, in the judgment of the board, will best procure the safety of all persons on such vessels in case of disaster. And every such vessel shall have the lifeboats required by these rules provided with suitable boat-disengaging apparatus, so arranged as to allow such boats to be safely launched while such vessels are under way, or otherwise, so as to allow such disengaging apparatus to be operated by one person, disengaging both ends of the boat simultaneously by the tackle by which it may be lowered to the water; and the board shall determine the kind of lifeboats, floats, rafts, and means of propelling same, lights, drags, anchors, and other equipment which are to be used on the vessel; and also, the kind and capacity

of the pumps for freeing the vessel from water in case of heavy leakage, the capacity of such pumps being suited to the navigation in which the vessel is employed.

48. The owner or master of any such vessel who refuses to provide such lifeboats, floats, rafts, and means of propelling them, line-carrying projectiles, drags, pumps, or appliances which, under the provisions of the preceding sections, are required by the Board of Local Inspectors, shall be fined \$1,000, and the same may be enforced against the owner of the vessel personally, or as a lien upon the vessel, which may be seized and sold to satisfy such fine and costs of court.

49. *Enforcement of rules*—The board shall have the power to enforce the requirements of these rules, first, by not granting a certificate; and, second, by revoking the certificate already issued to the vessel. The owner or master of the vessel may appeal from the action of the Board of Local Inspectors to the Superintendent of Transportation at any time within 10 days after the final action of the board; and the Superintendent of Transportation may modify or set aside the action of the board, but he shall certify his ruling to the board for observance in each case.

50. *Report of defective equipment, etc.*—In case where any master, mate, or engineer of any vessel whatsoever, shall note or have reason to believe that any part of any vessel's hull, engines, boilers, boats, or equipment of any kind, is in such a condition that it may be a menace or danger to the safety of the vessel or the lives of the crew or passengers, it shall be his duty to immediately report such fact, through the proper channels, to the Board of Local Inspectors, and request that an inspection be made in relation thereto. Any violation of this regulation on the part of any officer of any vessel shall, upon his conviction, render him liable to a fine not to exceed \$1,000 and one year's imprisonment.

51. *Life saving apparatus and equipment of the same*—Every lifeboat shall be substantially built, of a suitable model, and in a fair state of preservation and repair; upon each boat shall be plainly indicated the number of the boat, the date of its construction, the cubical capacity of the boat, and the number of persons that it may carry. To determine the cubical capacity, measure the length and breadth outside of the planking or plating, and the depth inside at the place of minimum depth, and multiply the product of these dimensions by 0.6. Divide the last result by 10 to ascertain the number of persons the boat may carry; provided, however, that in all cases the boat shall have sufficient room, freeboard, and stability to carry such number, which fact may be ascertained by actual experiments. Each lifeboat shall be provided with satisfactory air tanks.

52. Each life raft shall be substantially built and in good condition, and shall have plainly marked upon it the number of persons it may carry, which may be determined by experiment.

53. Each and every steam vessel, except launches under five gross tons, navigating the ocean, must be provided with sufficient lifeboat capacity to accommodate every person on board, including passengers and crew, except infants in arms. Each sailing vessel carrying passengers, if of more than five gross tons, shall have similar lifeboat capacity. Each steamer navigating only the terminal harbors, The Panama Canal, and Gatun Lake shall carry lifeboats of a capacity, as follows:

Cubic feet.	
Vessels over five and not over 10 gross tons.....	60
Vessels over 10 and not over 30 gross tons.....	75
Vessels over 30 and not over 50 gross tons.....	90
Vessels over 50 and not over 100 gross tons.....	135
Vessels over 100 and not over 150 gross tons.....	165
Vessels over 150 and not over 200 gross tons.....	200
Vessels over 200 and not over 300 gross tons.....	300

54. The lifeboat required for vessels over five and not over 10 tons, referred to in the foregoing table, must be carried or towed at all times by vessels when being navigated with passengers on board. For not more than one-third of the lifeboat capacity required on any vessel, there may be substituted its equivalent in approved life rafts.

55. Lifeboats required on Canal and harbor steamers, and on ocean steamers under 150 gross tons shall be equipped with: Two life preservers; one suitable painter; one boat hook; one axe; a properly secured life line on each side, fastened in bights not longer than three feet each, with a float in each bight; full complement of oars, and a spare one; full complement of rowlocks, each attached to boat with separate chain, and two spare rowlocks; steering oar with rowlock, or becket, or a rudder properly equipped; one bucket with lanyard; wooden boats, in addition, two plugs for each drain hole, attached to the boat with chains.

56. Lifeboats required on ocean steamers of 150 gross tons and over shall have the equipment enumerated above, and, in addition: One sail bent to a yard with necessary rigging, protected by a suitable canvas cover; one mast with necessary rigging and gear; one boiler; one efficient liquid compass; one lantern filled and ready for use; one gallon illumination oil in substantial can; one box matches in waterproof package, and carried in box attached

under stern thwart; 15 gallons fresh water in substantial wooden breaker; one substantial metal can, water-tight, with screw cap opening, containing 25 pounds hard bread or its equivalent; one canvas bag containing sailmaker's palm and needles, sail twine, marlin, marlin-spike, and hatchet, and six sufficient night distress signals, properly protected in metal case.

57. Collapsible lifeboats shall be equipped, and their cubical capacity and contents shall be computed, as for lifeboats. The equipment of lifeboats shall always be stored aboard same.

58. Life rafts must be equipped with: Two oars; two paddles; three rowlocks attached to raft with chains; one steering oar with attached rowlock; one boat hook; one suitable painter; a life line around sides and ends, fastened in bights of three feet or less, with a suitable float in each bight.

59. The equipment of life rafts shall always be stored aboard same.

60. Each steam vessel and every other craft carrying passengers for hire shall be equipped with a good life preserver for each person carried; every life preserver shall be readily adjustable and attachable to the person, of good materials and in good condition, and when immersed shall be capable of sustaining a downward pull of 18 pounds for 24 hours. They shall be stowed where and in such manner that they will be always ready for use, and notices shall be conspicuously posted, describing the method of their use.

61. Whenever the local inspectors deem it necessary, ring buoys, not to exceed four, shall be carried.

62. Every ocean steamer carrying passengers, and over 160 gross tons, shall be provided with at least three suitable line-carrying projectiles, and efficient means of propelling them, and with 3-inch manila line auxiliary thereto always ready for use, 800 feet thereof if the steamer be under 500 gross tons, and 1,500 feet if the steamer be of greater tonnage.

63. All steamers over five gross tons, and all other craft carrying passengers for hire, shall carry fire buckets and axes, as follows:

	Buck- ets.	Axes.
All steamers over five and not over 10 gross tons.....	2	1
All steamers over 10 and not over 50 gross tons.....	4	1
All steamers over 50 and not over 200 gross tons.....	8	2
All steamers over 200 and not over 500 gross tons.....	16	4
All steamers over 500 and not over 1,000 gross tons.....	20	6
All steamers over 1,000 gross tons....	25	8

64. Fire buckets and axes must be conveniently placed and ready for use, and must not be used for general purposes. When practicable, buckets shall always be filled with water.

65. All steamers and other craft carrying passengers for hire, if of more than 15 tons, shall carry efficient fire extinguishers, as follows:

Over 15 and not over 50 gross tons.....	1
Over 50 and not over 100 gross tons.....	2
Over 100 and not over 500 gross tons.....	3
Over 500 and not over 1,000 gross tons.....	6
Over 1,000 gross tons.....	8

66. All articles of equipment of a steamer, such as buckets, hose, axes, boats, oars, rafts, and life preservers, shall be plainly marked with the name of that steamer.

67. *Request for inspection*—Whenever a steamer engaged in carrying passengers to or from the Canal Zone enters the waters of the Canal Zone, it shall be the duty of the Captain of the Port to notify the master or agent of such vessel that the same is subject to the inspection laws of The Panama Canal; and, after being so notified, it shall be the duty of said agent or master to make a written request to the Board of Local Inspectors for the inspection of the vessel and her equipment, in accordance with the provisions of these rules. Any agent or master of a vessel who fails or refuses to make the written request as herein provided for, after receiving the notice abovementioned from the Captain of the Port, shall be liable to a fine of \$50 upon his conviction in the court having jurisdiction, in which said agent or master may be found.

68. *Violation of rules*—Any violation of any of the provisions of these rules for which a specific punishment is not prescribed herein, shall subject the owner or master of the offending vessel to a fine not exceeding \$1,000, or by imprisonment in jail not exceeding six months, or by both such fine and imprisonment in the discretion of the court.

69. *Fines and penalties*—The fines and penalties imposed under these rules shall constitute a lien on the vessel in each case, and upon judgment for any such fine or penalty execution may issue therefor, as in civil cases against such vessel, and same shall be sold to satisfy such execution; and the court may order the provisional detention of such vessel to abide the judgment of the court; but a bond, to be approved by the judge of the court, may be given to secure the payment of any

judgment that may be rendered, and the vessel shall be released thereon.

70. *Standard for inspection*—The hull of each steam vessel shall be such as to satisfy the inspectors that it is of a suitable structure for the service in which she is to be employed, and has suitable accommodations for passengers and crew, and is in a condition to warrant the belief that she may be used in navigation with safety to life. In passing upon the hull, the board shall not fix specific requirements, but will be governed by their best judgment in all cases, and will be satisfied by conformity to any well established and acceptable standard; all boilers shall conform to the requirements previously mentioned, but the Board will not fix specific ones; conformity to any approved standards, such as those prescribed by the United States Board of Supervising Inspectors, will be acceptable.

EXAMINATION OF BOILERS FOR INSPECTION.

71. Before a boiler is inspected it shall be cooled down, filled with cold water, allowing all air to escape, and a pressure of 10 pounds be shown on the steam gage; tubes must be thoroughly cleaned, all bridge walls, including bricks, castings, and grade bars, be removed from the furnaces and combustion chambers, which shall then be thoroughly cleaned, so that every part of the furnaces may be readily inspected; floor plates, castings, and shields in front of and around any part of the boiler shall be removed, so as to permit a thorough inspection of any and all parts of the shell, saddle, and braces; bilges around and under the boiler must be clean and dry, and the proper gags placed upon the safety valve, before the test will be applied. The internal inspection will be made after all the water has been let out and the sediment removed from the belly, and all handhole and manhole plates have been removed. If the inspector deems it necessary, he may order any part or the whole of the lagging to be removed, in order to ascertain the true condition of the shell. Failure to comply with any part of these rules will be sufficient cause for the inspector to refuse to make the inspection until the requirements herein set forth have been complied with.

INSPECTION OF THE FLOATING PLANT OF THE CANAL AND PANAMA RAILROAD COMPANY.

72. The Board of Local Inspectors shall regularly inspect all floating plant belonging to the Canal and the Panama Railroad Company, at least once every six months, except as to the steamers of the latter company, which are regularly inspected and licensed by the inspectors at the home port of the steamers in the United States.

73. *Scope of inspection and report*—(a) The inspection shall cover the hull, equipment, boilers, and motive power of every character and description, used in the work of the Canal or the Panama Railroad Company, except as noted in the preceding paragraph, with a view to the preservation of life and property, and the upkeep of the plant under all conditions. The board shall make a report of its findings, as soon as possible, to the Governor, through the Superintendent of Transportation, and shall specifically recommend such changes, repairs, and alterations in the hull, equipment, boilers, and motive machinery, as, in their opinion, may be necessary for the proper care of life and property, and the upkeep of such floating plant.

(b) Copies of such reports shall be forwarded direct to the division heads in the case of Canal property, and to the superintendent and chief engineer of the Panama Railroad Company in the case of Panama railroad property.

74. *Notice of repairs to be made*—No general repairs shall be undertaken on any piece of marine plant of over fifteen (15) tons burden until the same has been inspected and reported on by the Board of Local Inspectors, which report shall be taken as a guide as to the work to be done; and to expedite this inspection, it is required that the board shall receive notice of the retirement from service of any piece of plant, as above stated, at least 10 days before the time of undertaking such repairs; and at the time the board receives notice of said retirement, a list of required repairs, prepared by the marine engineer, master, or supervisor in immediate charge of the plant to be repaired, shall be filed in the office of the board for their information and guidance in making the above inspection.

75. *General repairs*—The term "General repairs" is intended to cover the periodic replacing of worn equipment, and such other repairs as may be authorized and made at such time, and does not cover the emergency repairs necessary at any time for the renewal of broken parts, or the running repairs made from day to day.

76. Compliance with the recommendations of the board is not obligatory on the part of the officials operating the floating equipment until approved by the Governor. This is not intended, however, to prevent such action as may be considered necessary in the board's recommendations without specific approval.

77. *Boilers*—The inspection of boilers by the local board shall be confined exclusively to those of the floating equipment, and does not include locomotive

boilers, stationary and portable boilers, or any others used exclusively on shore.

78. *Monthly report*—The Board of Local Inspectors, in addition to the report submitted immediately after inspection, shall prepare a monthly report of work done by them under the terms of these regulations, which report shall be filed with the proper authorities by the 10th day of the month succeeding.

EQUIPMENT OF THE FLOATING PLANT OF THE CANAL AND PANAMA RAILROAD COMPANY.

79. The following equipment shall be carried by the vessels and floating plant of the Canal and the Panama Railroad Company:

Pipeline suction dredges—Four life rings, one on each corner of boat, on lower deck; one life ring for every 300 feet of floating pontoon pipe; one life belt for each member of crew; one working boat; 12 fire buckets, on roof, filled; two 700-pound anchors, in addition to the number usually carried, to be operated with cable instead of chain; one fire hydrant, at least, and 100 feet of hose, on roof. *On both deck*—Four hydrants, to be spaced to best advantage to sweep entire deck; and 200 feet of fire hose; four chemical fire extinguishers, properly distributed; six fire axes; 24 fire buckets, filled. *Main deck*—Two hydrants and 100 feet of hose; four barrels of sand, stored in suitable box in proper location, six axes. All hydrants should be fitted with standard couplings.

Floating piledrivers—One life belt for each member of crew; 50 feet of hose; two fire axes; six fire buckets, filled; one working boat with sufficient capacity to carry all of the crew; two life rings; two 300-pound anchors, in addition to the number usually carried, to be operated with chain.

Launches, Birden type—Two life rings, one aft and one forward; one life belt for each person carried; one boat compass; one suitable anchor and chain, ready for service at all times; one hand lead and line, properly marked; one set anchor lights, oil; one set running lights, oil; one fire axe; three fire buckets, kept filled and ready for use; one fog horn and bell, in addition to steam whistle; one red lantern; one red flag.

Launches, Ruth C. and Mary S. types—One life ring; one life belt for each person; one boat compass; one suitable anchor and chain, ready for service at all times; one hand lead and line, properly marked; one set anchor lights; one set running lights; one fire axe; one fire bucket, kept filled; one red lantern; one red flag; two oars; two rowlocks; one boat hook.

Seagoing dredges—One steering compass; one standard compass; two suitable anchors and at least 90 fathoms of chain for each anchor, chain to be shackled to anchor and to be ready for service at all times; one hand line, properly marked; one set running lights, oil; one set anchor lights, oil; one Lyle gun, standard, to be purchased under United States inspection, with proper accessories for same; 12 life rings distributed, as follows: Two forward on each bow; one on each side aft on the main deck; one on each side of the bridge; one in the center on the upper deck; one on each side of the drag bridge; and one in the center; one on each side on rail which is abaft the funnel; (all these rings to be on hooks, not to be lashed, so that they can be easily detached at any time required, and to be properly equipped with buckets on same); one life belt for each member of crew, to be properly distributed through their respective quarters, placed in suitable racks, not to be locked or fastened; 300 feet of 2½-inch fire hose, with suitable nozzles, to be used for fire purposes only; 36 fire buckets, filled with water, in suitable racks and locations; four chemical fire extinguishers placed, as follows: One in petty officers' quarters; one in pilot house; two in after deck house; eight fire axes distributed, as follows: Two in petty officers' quarters; two in pilot house; two in engine room; two in after deck house; one fog horn; one fog bell; one set of Coston distress signals or rockets showing stars, or both; one code book, with one set of international signals of suitable size.

Tugboats—One suitable lifeboat to carry all the crew, properly equipped with oars and boat hooks; one steering compass for tugs that only go to dumping ground; one standard compass in addition to steering compass for tugs that take outside voyages; one suitable anchor and chain, which must be ready for service at all times; one hand lead and line, properly marked; one set running lights, oil; one set anchor lights, oil; 100 feet fire hose with nozzle, to be used for fire purposes only; four fire axes, placed in proper brackets; 12 fire buckets, to be filled and ready for use; three chemical fire extinguishers—one in engine room, one in mess room, one in pilot house; one fog horn; one fog bell; four life rings, two forward and two aft, in suitable hangers; one life belt for each member of the crew; one set Coston distress signals or a set of rockets showing stars, or both; one duplex double action, long lever hand pump, 2½-inch suction, should be installed and properly connected with the bilges, in suitable location. If tugs are used beyond dumping ground, each should be equipped with international code book and set of signal flags of suitable size.

Tug Bolivar—The following list applies to the

Bolivar only, owing to the fact that she is materially different from all of the other tugs: One standard compass; one set running lights, oil; one set anchor lights, oil; one hand lead and line, properly marked; one lifeboat sufficient to carry the crew; six life rings, properly distributed—one on each side forward, one on each side aft of the upper deck, one on each side aft of the main deck; one life preserver for each member of the crew; 24 fire buckets placed in racks in suitable location, filled with water; five fire axes on upper deck, in proper brackets, six fire axes on main deck, in proper brackets; five chemical fire extinguishers—two on upper deck, one forward and one aft; three on main deck, forward, aft, and amidship; one set Coston distress signals or rockets showing stars, or both; four lengths of 2½-inch fire hose with four nozzles, to be used only in case of fire on the ship, and to be entirely separate from her wharf fire-fighting equipment; one hand pump, long lever, duplex, connected with the bilges.

Clapets—One life raft properly equipped to accommodate entire watch, so placed that it can be readily put into the water when needed; two life rings, one on each side of the bridge; one life belt for each member of watch, not to be lashed or locked; two fire axes, one in engine room and one in after quarters; one chemical fire extinguisher in after cabin; nine fire buckets filled with water, in proper racks; one steering compass; one hand lead and line, properly marked; one set running lights, oil; one set anchor lights, oil; one suitable anchor and 30 to 45 fathoms of cable, ready for service at all times; one fog horn; one fog bell; one set Coston distress signals; suitable life lines on at least one side, to be stretched at all times when clapet is under way.

Ladder dredges—One life raft, having three oars, one boat hook, and three rowlocks, same to be certified to accommodate one entire watch, and so placed on the dredge that it can be readily thrown overboard when needed; four life rings, distributed one on each corner of dredge in a conspicuous and convenient position on hooks, not to be lashed; one life belt for each member of the watch, kept in suitable racks and located where they can be easily reached by all members of the crew, not to be locked or fastened; two chemical fire extinguishers; 12 fire buckets, to be kept filled; 100 feet standard fire hose; two hose nozzles; four fire axes. All these items of fire equipment to be used in case of fire only.

Drill boats, dipper dredges, and rock breakers—One working boat, certified to carry one entire watch, to be available alongside the dredge at all times when in service; four life rings, distributed one on each corner of the dredge in a conspicuous and convenient position, on hooks, not to be lashed; one life belt for each member of crew, to be kept in suitable racks where they can be easily reached by all members of the crew, not to be fastened or locked; one fire extinguisher; six fire buckets; 100 feet standard fire hose; one nozzle; two fire axes. All these items of fire equipment to be used in case of fire only.

Barges—One suitable anchor that will hold the barge in a heavy sea; 30 fathoms of chain on the Pacific slope; 60 fathoms of chain on Atlantic slope; one life ring placed in a convenient hanger; all barges should be equipped with life lines on one side, fore and aft; one life preserver for each member of the crew; one heaving line. Barges when towed to points beyond the dumping ground should also carry a small unsinkable boat, tested to bear the entire crew of barge when filled with water, with necessary oars and rowlocks.

80. Gasoline launches belonging to the Canal or the Panama Railroad Company shall be equipped in the same way as hereinbefore provided for motor boats, and in addition thereto, shall carry one red flag and one red lantern.

INSPECTION OF MOTOR BOATS.

81. Any boat or vessel operated by means of gas, gasoline, naphtha, or other like fluid, or by electricity, is deemed a motor boat.

82. All motor boats navigating the waters of the Canal Zone, except those owned by the United States or other countries, are subject to inspection at least once each year.

83. The hull shall be of a structure suitable for the service in which it is to be employed, and shall be in a condition to warrant the belief that it may be used in navigation with safety to life.

84. (a) Motors, tanks, piping, steering apparatus, and other fittings shall be well made, suitably fixed in the boat, of a design adapted for the service in which employed, equipped with proper safety appliances, and of such construction, shape, condition, arrangement, and material that they may be safely employed in the service proposed without peril to life.

(b) Motor boats shall be divided into classes, as follows, according to length, which shall be measured from end to end:

Class I. Less than 26 feet.

Class II. Twenty-six feet or over, but less than 40 feet.

Class III. Forty feet or over, but less than 65 feet.

(c) Motor boats, Class I, shall carry one good lantern and make suitable provision for exhibiting it, so that a

white light may be placed aft to show all around the horizon; and, in addition, one suitably combined lantern (red and green) with arrangements for holding it, by which red may be shown to port and green to starboard from right ahead to two points abaft the beam, on their respective sides.

(d) Motor boats, Classes II and III, shall carry one good lantern and an arrangement for exhibiting it near the bow, which will show a bright white light from right ahead to two points abaft the beam on each side, the glass or lens to be of not less than 19 square inches in the case of Class II, and not less than 31 square inches in the case of Class III; one lantern and provision for exhibiting it, so that a bright white light may be placed aft and show all around the horizon; two lanterns and provision for exhibiting them, so that a green light may be exhibited from right ahead to two points abaft the beam to starboard, and a red light from right ahead to two points abaft the beam to port, in each case with the inboard screens, not less than 18 inches long in the case of Class II, and not less than 24 inches long in the case of Class III, to prevent the lights from being seen across the bow, the glasses or lenses to be of fresnel or fluted, and of at least 16 square inches in the case of Class II, and 25 square inches in the case of Class III.

(e) Every motor boat of Class II or III shall be provided with an efficient fog horn and with an efficient fog bell not less than eight inches across the mouth.

85. In addition to the running lights, whistle, fog horn, and bell previously mentioned, each motor boat shall be provided with the following: Three oars; three rowlocks, with sockets; one bucket; one bailer; two sacks containing at least 50 pounds of sand each, one to be stowed near the engine; suitable lines, anchor, and cable; a good life preserver, life ring, or buoyant cushion for each person carried, to be placed, so as to always be ready for use. In addition, Classes II and III shall carry at least one suitable fire extinguisher.

86. The certificate in the case of each motor boat will state the number of persons that the boat may carry with prudence and safety, and the waters she may navigate; this certificate must be posted under glass on board at all times.

87. Each motor boat shall have a name or number neatly painted on each side of the bow in suitable letters or numbers.

88. Every motor boat shall have on board at all times two copies of the *Rules for the navigation of the Panama Canal*.

89. Motor boats of Class III or longer, if of more than 10 gross tons, shall carry life rafts of sufficient capacity to carry crew and passengers.

90. Motor vessels for hire, longer than those of Class III, which carry passengers, shall comply not only with these requirements, but also with all requirements for steam vessels, in so far as they may be reasonably applicable.

IN GENERAL.

91. The names, numbers, or other distinguishing marks of all floating plant should be neatly painted on the hull, in order that they may be readily identified at all times.

92. All pieces of floating plant, whether self-propelling or otherwise, should be provided with a red light at night and a red flag by day, to be violently waved as a distress signal should necessity arise.

93. The life belts, life rings, and life floats on any of the floating equipment of the Canal or the Panama Railroad Company shall at no time be lashed or locked, but shall be readily accessible to every one at all times.

94. All life rings should be provided with proper buoys.

95. All anchors should be shackled to chain, and be kept in position to be readily tripped.

96. Chemical fire extinguishers should not have the instructions on them covered by paint.

97. Hereafter, on all self-propelling vessels equipped with fire and life saving appliances, drills shall be held at least once a week, as the superintendent may direct, and a report in relation thereto shall be submitted to the superintendent and a copy forwarded to the Board of Local Inspectors.

98. In case where any of the apparatus or appliances fails to work properly, a report should be made calling attention to the fact, and stating what steps have been taken to remedy the defects.

99. The number of passengers to be carried on the individual boats, belonging to the Canal or the Panama Railroad Company, is not definitely stated, but the officer in command is directed to see that the safety limit is not exceeded, and that there is a life preserver in the proper place and easily accessible, for all of the crew and every passenger carried; and that there are a sufficient number of lifeboats or rafts to take care of and land all of the crew and passengers, in case it may be necessary.

LICENSES.

100. *Applicants to appear before the board*—All applicants for any licenses whatsoever must appear in person before the board and take the examination prescribed by these regulations before any licenses will be issued; in addition thereto, masters, mates, pilots, and engineers

must take the oath of office before a member of the board or such other person as may be authorized to administer it.

101. *Filing of applications*—All applications must be filed with the records of the board.

102. *Endorsements*—Whenever practicable, applicants for a license as master, mate, or pilot shall have the written endorsement of some other master; in the case of an applicant for an engineer's license he should have the endorsement of some other engineer; in both cases they should have the endorsement of the head of the department in charge of the work in which they may be engaged.

103. *General qualifications of applicants*—No original license will be issued to any master, mate, pilot, or engineer who can neither read nor write; nor to any person who is addicted to the use of intoxicants, or who is mentally, morally, or physically unfit to hold such a license.

104. *Notices of examination*—Application for original license shall be made on the prescribed forms and comply with the requirements of law; the board will furnish applicants with a written or printed notice of the time and place of examination.

105. *Refusal of license*—If the board shall decline to grant the applicant the license asked for they shall furnish him a statement, in writing, setting forth the cause of their refusal to grant the same.

106. *Examination of applicant*—Whenever a person applies to be licensed as master, mate, engineer, or pilot of any steam vessel propelled upon the waters within the jurisdiction of the Canal Zone, the board shall make diligent inquiry as to his character and shall carefully examine the applicant, as well as the proof he presents in support of his claim, and if upon full consideration they be satisfied that his character, habits of life, knowledge, and experience in the duties of master, mate, engineer, or pilot are all such as to authorize the belief that he is a suitable and safe person to be entrusted with the powers and duties of such station, they shall recommend that a license be issued to him, authorizing him to be employed upon any vessel propelled upon the waters within the jurisdiction of The Panama Canal, in such duties, for the term of three years; but such license shall be suspended or revoked upon satisfactory proof of negligence, unskillfulness, or intemperance.

107. Masters, engineers, and pilots, shall be designated by classes, and upon recommendation of the board, shall be licensed accordingly.

108. The grades or classes, together with the requirements for each, may be varied from time to time as the board may see fit.

109. The Canal authorities shall not engage for permanent employment upon any of its vessels propelled by machinery, any master, mate, pilot, or engineer who shall not be duly licensed by the United States, or the Government of The Panama Canal, and who is not a citizen of the United States or the Republic of Panama, unless an American citizen be not available.

110. *Issue of license to aliens*—The Government of The Panama Canal may issue licenses as masters, mates, pilots, or engineers to persons who are not citizens of the United States.

111. All licenses issued to masters, mates, pilots, and engineers shall be filled out on the face with pen and black ink, instead of being typewritten, a broad pen and black ink mark to be drawn through all unused spaces in the body thereof, to prevent illegal interpolation.

112. *Loss of license*—In case of loss of license of any class, from any cause, the inspectors, upon receiving satisfactory evidence of such loss, shall issue a certificate to the owner thereof, which shall have the authority of the lost license for the unexpired term, unless in the meantime the holder thereof shall have the grade of his license raised under due examination, in which case a license in due form for such grade may be issued.

113. *Written examination*—No master's, mate's, pilot's, or engineer's license shall be issued or grade increased, except upon written examination, which written examination shall be placed on file in the records of the office of the board, except that masters, mates, pilots, and engineers, in the Canal or the Panama railroad service, who have satisfactorily served in the capacity for which they seek a license, for not less than two years, and are certified to by a competent medical authority as being physically fit for the service, may, at the discretion of the board, be examined orally, and on proving their fitness, may be licensed.

114. *Reexamination*—No applicant for license who has been duly examined, found deficient and refused a license, shall be authorized to again come before the Board of Local Inspectors for the same examination until after a period of one year shall have elapsed.

115. *Renewal*—Any officer holding a Canal license may get it renewed at its expiration, providing he gives satisfactory evidence to the Board of Local Inspectors that he has served satisfactorily during the time of his previous license, and is in good physical condition; on

receiving his new license, he shall return the old one to the board.

116. Whenever a member of the Board of Local Inspectors shall find on board any vessel in the Canal Zone, a licensed officer of the Panama Canal under the influence of liquor or other stimulant to such an extent as to unfit him for duty, or when any licensed officer aforesaid shall use abusive or insulting language to any inspector, or assaults any inspector while on official duty, such officer shall then and there be informed that his license is suspended or revoked, as the case may be, without further trial or investigation. This action shall be immediately reported to the Board of Local Inspectors.

117. The fact that a licensed officer is under the influence of liquor in the presence of the inspector or inspectors to such an extent as to unfit him for duty while on board a vessel, shall be sufficient cause for such suspension or revocation.

118. *Revocation*.—When the license of any master, mate, pilot, or engineer is revoked such license expires with such revocation, and any license subsequently granted to such person shall be considered in the light of an original license; upon the revocation or suspension of the license of any such officer, said license shall be surrendered to the Board of Local Inspectors ordering such suspension.

119. The suspension or revocation of a license shall debar the person holding the same from the exercise of its privileges therein granted as long as such suspension or revocation remains in force.

120. All masters and pilots of steam vessels shall, when receiving their licenses, either original or renewal, be furnished a copy of the *Rules and regulations governing the navigation of The Panama Canal*.

SUSPENSION AND REVOCATION OF LICENSES.

121. The board shall, when charges have been duly filed against any licensed officer of vessel, furnish the accused with a copy thereof, setting forth specifically their character, and a copy of the rules of the board which have been violated.

122. Subpenas shall be in the prescribed form, one copy of which shall be furnished the witness.

123. All testimony shall be reduced to writing; the accused shall be allowed to cross-examine witnesses, and in case of exceptions to questions for any cause, the board shall note the exceptions in the margin of the depositions. The deposition shall be signed by the witness and sworn to before an officer authorized to administer oaths.

124. The accused may have the hearing of the case continued upon the presentation of reason satisfactory to the board, and the board may, in like manner, continue the hearing from day to day.

125. During the trial the witnesses shall be examined separately, but if the accused be also a witness, he shall not be subject to this rule.

126. At any time before the conclusion of the evidence, the charge or charges (if being tried on charges), may be amended, notice of said amendment being furnished to the accused of the nature of such amendment, but no amendment shall be permitted after the conclusion of the evidence.

127. The board shall furnish the accused with a statement, in writing, of its findings in the premises.

128. The board shall record in a well-bound book, to be furnished for that purpose, the charge or charges against the accused, the testimony of all the witnesses, and their decision in the premises, which record shall be signed by the inspectors.

129. The accused shall have the right of appeal from the decision of the Board of Local Inspectors to the Superintendent of Transportation, and through him to the Governor: *Provided*, said notice of appeal is given in writing to the board within 30 days from the date of the board's decision, when it shall become the duty of the board to forward a certified copy of their decision, together with the charges and all evidence, in writing, on file in its office.

130. For all purposes of the inspection service, the Board of Local Inspectors, or any one of them, is authorized to administer the necessary oaths.

CLASSIFICATION OF LICENSES.

Masters.

131. *Class I*.—Masters of steam launches; By steam launch is meant any selfpropelling craft less than 50 tons burden and over 15 tons.

Class II.—Masters of selfpropelling hopper barges, not exceeding 750 gross tons.

Class III.—Masters of towboats or selfpropelling crane boats, not exceeding 1,000 gross tons.

Class IV.—Masters of steam vessels, plying as passenger boats between Canal Zone ports and adjacent ports in the Republic of Panama, less than 100 tons.

Class V.—Masters of ladder dredges.

Class VI.—Masters of suction dredges.

Class VII.—Masters of dipper dredges.

Class VIII.—Masters of steam vessels, not exceeding 3,000 tons, gross tonnage.

Class IX.—Masters of seagoing steam vessels of any tonnage.

Mates.

Class I.—Mates of selfpropelling hopper barges, not exceeding 750 gross tons.

Class II.—Mates of towboats or selfpropelling crane boats, not exceeding 1,000 gross tons.

Class III.—Mates of steam vessels, plying as passenger boats between Canal Zone ports and adjacent ports in the Republic of Panama, less than 100 tons.

Class IV.—Mates of ladder, suction, and dipper dredges.

Class V.—Mates, first, second, and third, of steam or sailing vessels of any tonnage.

Pilots.

Class I.—Pilots of steam launches.

Class II.—Pilots of selfpropelling hopper barges, not exceeding 750 gross tons.

Class III.—Pilots of towboats or selfpropelling crane boats, not exceeding 1,000 tons.

Class IV.—Pilots of steam vessels, plying as passenger boats between Canal Zone ports and adjacent ports in the Republic of Panama, less than 100 tons.

Class V.—Pilots of seagoing steam or sailing vessels of any tonnage.

Engineers.

Class I.—Engineers of steam launches.

Class II.—Engineers, chief, first, and second, of selfpropelling hopper barges, not exceeding 750 gross tons.

Class III.—Engineers, chief, first, and second, of towboats or selfpropelling crane boats, not exceeding 1,000 tons.

Class IV.—Engineers of steam vessels, plying as passenger boats between Canal Zone ports and adjacent ports in the Republic of Panama, not exceeding 100 tons.

Class V.—Engineers, chief, first, second, and third of seagoing dredges; and all engineers on ladder, dipper, and suction dredges.

Class VI.—Engineers, chief, first, second, third, and fourth of seagoing steam vessels of any tonnage.

Navigators of Motor Boats.

Class I.—Navigators of motor boats of less than 15 tons.

Class II.—Navigators of motor boats of 15 gross tons or over.

Chauffeurs.

Chauffeurs of all automobiles.

QUALIFICATIONS OF APPLICANTS.

132. The qualifications and requirements of applicants for license, in general, are, as follows:

Masters and Mates.

(a) *Masters, Classes I and II; mates, Classes I, II, and III*.—Knowledge of the rules of the road, whistle and fog signals, elementary piloting and navigation, handling, care, and maintenance.

(b) *Masters, Classes III and IV; mates, Class IV*.—Knowledge of the rules of the road, whistle and fog signals, navigation, piloting, handling, care, preservation, and maintenance.

(c) *Masters, Classes V, VI, and VII; mates, Class IV*.—General knowledge of the operation, care, preservation, and maintenance of the plant.

(d) *Masters, Classes VIII and IX; Mates, Class V*.—Thorough knowledge of the rules of the road, whistle and fog signals, astronomical and other common forms of navigation, piloting, coasting, handling, care, preservation, and maintenance of seagoing vessels.

(e) Any applicant for master's license must have had at least one year's experience upon the coast waters of the United States, Gulf of Mexico, or Canal Zone, a portion of which experience must have been obtained within the three years next preceding his application for such instrument, and the fact must be verified by satisfactory documentary evidence to be filed in the office of the Board of Local Inspectors. Practical service in the deck department of a seagoing or coastwise steam yacht shall be accepted, when offered in documentary evidence by any person applying for an original license. No original license will be issued to any applicant for master until satisfactory evidence shall have been produced that he has had sufficient sea experience in the lower grades to fully qualify him for the higher license.

(f) The license must show upon its face the waters in which the applicant is qualified to act.

(g) No person shall receive an original license as mate of the various steamers provided for under the Canal Zone classification without having had at least two years' experience on a vessel of the class for which he asks license, or a higher class, either as quarter-master or sailor.

Pilots.

(h) *Pilots, Classes I, II, III, and IV*.—Knowledge of the rules of the road, whistle and fog signals, elementary navigation, steering and handling, and a familiarity with the aids to navigation, channels, and waters covered by their licenses.

(i) *Pilots, Class V*.—Thorough knowledge of the rules of the road, whistle and fog signals, astronomical and the common forms of navigation, coasting, handling vessels around wharves and through the locks, and hold

a master's unlimited license for seagoing (or lake) steamers.

(j) The following requirements will be necessary before an original pilot's license will be issued to any one:

(A) For vessels of any class or kind of 3,000 tons or over: At least three years' experience in the deck department of steam or sailing vessels, one year of which must have been as steersman.

(B) For selfpropelling barges, towboats, and vessels over 65 feet in length, or of 100 tons burden or over: At least two years' experience in the deck department of a steam or sailing vessel, one year of which must have been as steersman.

(C) Pilots of motor boats and launches, as hereinbefore described, need not of necessity have had any definite length of experience, but must demonstrate their fitness to the board, before such license will be granted.

(D) Whenever a pilot desires an extension of his license to other waters, he shall make written application to the board, stating the extension so desired, and after having been examined in writing and found to be qualified, he shall receive such extension and the same shall be endorsed upon his original license.

(k) Pilots of steam vessels while in the discharge of their duties must be governed by the rules of the board, and not by instructions emanating from any inspector or other unauthorized person.

(l) It shall be unlawful for any person to pilot or navigate a vessel propelled by machinery, of any size or kind whatsoever, in the waters of the Canal Zone, without having first obtained a proper license to do so, and any one who shall be convicted of a violation of this law is liable to a fine not to exceed \$100.

Engineers.

(m) *Engineer, Classes I, II, and IV, first and second of Class III, first, second, and third of Class V, and third and fourth of Class VI*.—General knowledge of boilers, their care and preservation, method of staying and testing, use of water gage, pressure gage, thermometer and salinometer, method of testing and altering slide valves, general knowledge of the engines and auxiliaries, and have a working knowledge of how to make temporary and permanent repairs.

(n) *Engineers, chief of Classes III and V, chief, first, and second of Class VI*.—Thorough knowledge of marine engines, boilers, and auxiliaries, their operation, care, preservation, maintenance, and repair.

(o) *Engineers of all grades in ladder, dipper, and suction dredges, Class V*.—A thorough knowledge of the boilers, engines, and machinery of the plant, their operation, care, preservation, maintenance, and repair.

(p) No person shall receive an original license as engineer or assistant engineer (except for launches, motor, or other small boats), who has not served at least three years in the engine department of a steam vessel, a portion of which experience must have been obtained within the three years next preceding the application: *Provided*, that any person who has served three years as apprentice to the machinist trade in marine, stationary, or locomotive work, any person who has served for a period not less than three years as locomotive or stationary engineers, any person graduated as mechanical engineer from a duly recognized school of technology, may be licensed to serve as engineer of steam vessels after having had one year's experience in the engine department of steam vessels, a portion of which experience must have been obtained within the three years preceding his last application, which fact must be verified by certificate, in writing, of the licensed engineer or master under whom applicant has served; said certificate to be filed with the application of the candidate, and no person shall receive a license as above (except for special license), who is not able to determine weight necessary to be placed on the lever of a safety valve (diameter of valve, length of lever, distance from center of valve to fulcrum, weight of lever and weight of valve and stem being known), to withstand any given pressure of steam in the boiler, or who is not able to figure or determine strain brought on braces of a boiler with a given steam pressure (the position and distance apart of braces being known), such knowledge to be determined in writing, and report of such examination filed with application in the office of the Board of Local Inspectors; and no engineer or assistant engineer now holding a license shall have the grade of the same raised without possession of the above qualifications. No original license shall be granted any engineer or assistant engineer who does not understand plain rules of arithmetic, except that original licenses may be issued to those persons in the Canal and the Panama railroad service, who have satisfactorily served two years in the grade for which they receive licenses.

(q) All candidates for the position of engineer in any grade must give satisfactory evidence to the Board of Local Inspectors, that they have sufficient knowledge of the engines, boilers, and machinery of the class of vessels in the grade for which they make application for such license.

(r) It shall be the duty of the engineer when he assumes charge of the boilers and machinery of a steamer to forthwith thoroughly examine same, and if he finds any part thereof in bad condition, caused by neglect or

inattention on the part of his predecessor, he shall immediately report the facts to the officer in charge of the work, or the master, owner, or agent, and to the Board of Local Inspectors, who shall thereupon investigate the matter, and if the former engineer has been culpably derelict in his duty, they shall suspend or revoke his license.

133. Steamshovel employees in the service, and employees with steamshovel experience, will be eligible for positions on the dipper dredges operated by The Panama Canal, subject to the following requirements:

(a) Steamshovel engineers will be eligible for appointment to position of mate (Craneman) on dipper dredges upon passing examination before the Board of Local Inspectors and securing necessary license for the service.

(b) Steamshovel crane-men will be eligible for appointment to position of dipper dredge engineer upon passing examination before the Board of Local Inspectors and securing necessary license for the service.

(c) All applicants for positions on dipper dredges will be required to secure necessary license from the Board of Local Inspectors; marine licenses, as issued by the Department of Commerce, will not be accepted for this service.

All applications for dipper dredge service should be forwarded to the Resident Engineer, Dredging Division, enclosing license (which will be returned), and appointments will be made, when vacancies exist, in the order of the receipt of such applications.

134. Licensed officers serving under a three years' license shall be entitled to a raise of license into a higher grade, after one year's experience in the grade for which they are licensed, on satisfactory evidence of their capability: *Provided*, that the original license be returned to the Board of Local Inspectors.

Navigators of Motor Boats.

135. (a) *Classes I and II*—The applications must be made upon the forms prescribed by the Board of Local Inspectors; the applicant must be 18 years of age or over, of sober habits, able to read and write either the English or Spanish language, have his application endorsed by two reputable citizens of the Canal Zone, or the cities of Colon or Panama, vouching for his sobriety and trustworthiness, and prove to the satisfaction of the board that he has the necessary knowledge, skill, and judgment for the safe and skillful navigation of motor boats.

(b) The board shall examine the applicant in regard to his knowledge of the use of gasoline, gas, naphtha, and other like fluids, and electricity in the operation of motors and machinery, and of the mechanism and operation of motor boats, as well as upon his knowledge of the English or Spanish language, and upon the laws and regulations of the Canal Zone relating to the navigation of the aforesaid waters, and to the operation of motor boats and other vessels upon said waters. In order to determine the skill of any applicant, said board may require him to make a practical demonstration thereof.

(c) Coincident with the issuance of any navigator's license herein provided for, the Collector, upon the recommendation of the Superintendent of Transportation, shall deliver to the licensee a metal check or badge having stamped thereon the serial number of the licensee's license, C. Z. It shall be the duty of each person holding such license to wear or carry with him such check or badge when he is operating any motor boat in the waters of the Canal Zone. For such badge and license, each such licensee shall pay to the Collector \$1, same to become a part of the revenues of The Panama Canal. Upon the request of any Canal Zone police officer any such licensee, while in charge of any motor boat in the waters of the Canal Zone, shall exhibit such badge. In addition to wearing such badge, the licensee shall have framed and carried on any motor boat which he may be navigating the license issued to him as aforesaid.

(d) The navigator's license shall continue in force until it may be revoked for cause, but if at any time it may be shown that the holder of the license for motor boats should not be further entrusted with the operation of such boats in the waters of the Canal Zone, on account of drunkenness, lack of skill in operating motor boats, or for any other good and sufficient reason, his license may be revoked.

(e) Any candidate who fails to pass the required examination and qualify for a navigator of motor boats will not be allowed to again appear before the board until an interval of at least six months shall have elapsed.

(f) No navigator's license will be issued for any motor boat over 65 feet in length.

(g) Any person who operates a motor boat in or upon the waters of the Canal Zone without first having obtained a license as herein provided for, or without complying with any other requirement of this ordinance applicable to him, shall be guilty of a misdemeanor, and on conviction thereof shall be punished by a fine not to exceed \$500, or by imprisonment in the district jail for not more than six months, or by both such fine and imprisonment, in the discretion of the court.

(h) Any boat or vessel operated by means of gas, gas-

oline, naphtha, or other like fluid, or electricity, is deemed a motor boat.

Chaufeurs.

136. (a) *Class I*—The requirements for a chauffeur's license are in the main the same as those for a navigator of motor boats, except that he shall have had experience in the operation of automo biles, and gasoline and electric machinery, but is not required to have any knowledge of motor boats or Canal Zone waters.

(b) The board shall examine the applicant in regard to his knowledge of gasoline and electric motors and machinery, the mechanism and operation of automobiles, his knowledge of the English and Spanish language, and the laws and regulations of the Canal Zone relating to the operation of automobiles over the streets and roads of the Canal Zone.

(c) In order to determine the skill of any applicant, he may be required to make a practical demonstration thereof.

(d) Coincident with the issuance of any chauffeur's license, the Collector, upon the recommendation of the Superintendent of Transportation, shall deliver to the licensee a metal check or badge having stamped thereon the serial number of the licensee's license and the words and letters "Chauffeur's license, C. Z." It shall be the duty of each person holding such chauffeur's license to wear or carry with him said check or badge when he is driving an automobile over Canal Zone streets or roads. For such badge and license, each licensee shall pay to the Collector \$1, same to become a part of the revenues of The Panama Canal. Upon the request of any Canal Zone police officer any such licensee, while in charge of an automobile on Canal Zone streets or roads, shall exhibit such badge.

(e) The said chauffeur's license shall continue in force until it may be revoked for cause, but if at any time it may be shown that the holder of the chauffeur's license should not be further entrusted with the operation of automobiles in the Canal Zone, on account of drunkenness, lack of skill in operating automobiles, or for any good and sufficient reason, his license may be revoked.

(f) Any candidate who fails to pass the required examination and qualify for chauffeur, will not be allowed to again appear before the board, until an interval of at least three months shall have elapsed.

(g) Any person who operates an automobile over the streets and roads of the Canal Zone without first having obtained a license as herein provided for, and without complying with any other requirement of this ordinance applicable to him, shall be guilty of a misdemeanor, and upon conviction thereof shall be subject to a fine of not less than \$25; and upon any subsequent conviction may, in addition to having such fine adjudged against him, be confined in the district jail for a period not to exceed 30 days.

(h) The term "Automobile" as herein used, shall apply to all vehicles of automobile, or similar construction and operation.

GEO. W. GOETHALS,
Governor.

Sale of Obsolete Metal Checks.

THE PANAMA CANAL,
OFFICE OF DEPOT QUARTERMASTER,
CRISTOBAL, C. Z., May 21, 1914.

Sealed bids will be received at the office of the Depot Quartermaster, Mount Hope, until 2 o'clock p. m., Saturday, June 6, 1914, when they will be opened in the presence of attending bidders, for miscellaneous lot of approximately 1,500 old series metal checks.

These may be seen on any working day between the hours of 7 and 11 a. m., and 1 to 5 p. m., on application to this office.

Bids must be plainly marked "Proposal to purchase old metal checks, to be opened June 6, 1914," and addressed to the Depot Quartermaster, Mount Hope, C. Z. The right is reserved to reject any or all bids.

C. H. MANN,
Depot Quartermaster.

Sale of Combined Pool and Billiard Table.

THE PANAMA CANAL,
OFFICE OF THE DEPOT QUARTERMASTER,
MOUNT HOPE, C. Z., May 28, 1914.

Sealed bids will be received at the office of the Depot Quartermaster, Mount Hope, until 2 o'clock p. m., Saturday, June 13, 1914, when they will be opened in the presence of attending bidders, for one combined pool and billiard table complete, with one set billiard balls, one full set pool balls, fourteen (14) cues, one cue rack, buttons, and chart.

The table may be seen on any working day at the Cristobal shop store (near the colored commissary building) between the hours of 7 and 11 a. m., and 1 and 5 p. m.

Bids must be plainly marked "Proposal to purchase combined pool and billiard table, to be opened June 13, 1914," and addressed to the Depot Quartermaster, Mount Hope, C. Z. The right is reserved to reject any or all bids.

C. H. MANN,
Depot Quartermaster.

MOVEMENTS OF OCEAN VESSELS.

The following is a list of sailings and scheduled arrivals of the Panama Railroad Steamship Line; of the Royal Mail Steam Packet Company; of the Hamburg-American Line, and of the United Fruit Company's Line:

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,

THE CANAL RECORD,

Ancon, Canal Zone,

Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

First Earnings of the Canal.

Commercial use of The Panama Canal began on May 18, when three barges loaded with sugar diverted from the Tehuantepec route by the American-Hawaiian Steamship Company, left Balboa in tow for Cristobal. Since that time barges have been going through the Canal in tow more or less regularly, and will probably continue to do so as long as the car shortage exists, or until the Canal is permanently opened for the passage of ocean going vessels. The total earnings in Canal tolls on cargo and ballast tonnage from the date abovementioned until the end of the month is placed at \$7,356.12, divided, as follows:

	Tons.	Tolls.
On cargo handled from Balboa to Cristobal.....	3,276.00	\$3,931.20
Cargo handled from Cristobal to Balboa.....	184.39	221.27
Ballast tonnage Cristobal to Balboa.....	2,494.71	2,993.65
Ballast tonnage on barge No. 14, Paraíso to Balboa.....	175.00	210.00
Total.....	6,130.10	\$7,356.12

The only cargo handled from Cristobal to Balboa was a load of angle iron transported through the Canal on barge No. 15 on May 25. Under the existing arrangement, the Panama Railroad Company is charged with all tolls, and, in addition, pays for towage, but the latter charge is confined as nearly as possible to actual cost. The charge for tolls on cargo tonnage is \$1.20 per net ton of 100 cubic feet; the tolls collectible on the net ballast tonnage is 60 per cent of the net cargo tonnage charge.

The "Paraíso" Working at Cucaracha Slide.

The new 15-cubic yard dipper dredge *Paraíso*, which had been lying alongside the dredging wharf at Paraíso since May 25 for the erection of its parts, was towed past the pontoon bridge at Cucaracha slide and placed at work on Saturday, June 6. It is excavating rock near the south side of Gold Hill, in the part of Cucaracha slide adjacent to the

hill, and is working with general satisfaction.

The *Gamboa*, twin of the *Paraíso*, and the dipper dredges *Chagres* and *Mindi* are also working at the base of the slide. All are excavating rock, and six well drills, mounted on pontoons, are drilling the heavy masses for blasting. The ladder dredges have been transferred to other parts of the Cut, north of Gold Hill. Of the two pipeline suction dredges formerly working at the slide, No. 85 has been working during the past month in Miraflores Lake, and No. 86 is now being overhauled at Paraíso.

The minimum width of the Canal channel opposite Cucaracha slide on Tuesday, June 9, was 180 feet, and its minimum available depth was 30 feet.

Completion of Dry Excavation on Canal Proper.

Steamshovel operations in the removal of material as a preventive against slides, which have been in progress for several months past on the east bank of the Cut between Culebra village and Rio Grande, were permanently suspended on Monday June 8, thus bringing to an end all steamshovel excavation in connection with the Canal proper. One shovel was taken out on Saturday and the remaining one on the following Tuesday. All tracks will be taken up as far as the north yard at Rio Grande. Ten train crews were connected with the work, the suspension of which will result in some reduction in force in the Transportation Department.

Increase in Number of Lock Operations.

On account of beginning of regular commercial service through the Canal, in handling ship's cargo across the Isthmus in barges, the number of lockages during the month of May was greatly in excess of the number for any preceding month, as may be seen from this summary of lockages made to June 1, 1914:

Month.	Gatun.	Pedro Miguel.	Miraflores.
September.....	2	0	0
October.....	6	3	4
November.....	5	4	2
December.....	11	2	4
January.....	9	4	8
February.....	7	2	2
March.....	11	2	2
April.....	7	6	9
May.....	19	19	20
Total.....	67	42	51

Towing locomotives were used in handling all vessels at all these locks, and for the most of the lockages at Gatun and Pedro Miguel, the machinery was operated from the table in the control house. The first commercial lockage was made on May 18 at Miraflores; the first at Pedro Miguel and Gatun, on May 19.

The erection of a stable in the vicinity of the Ancon corral, for the use of impounded animals, and animals which have to be isolated on account of disease, has been authorized.

READY TO USE THE CANAL.

Steamship Lines Arranging to Use Shorter Route as Soon as Canal is Available.

In anticipation of the opening of the Canal to commercial traffic, the Pacific Steam Navigation Company has directed the establishment of a fortnightly service from Liverpool around South America. The route is to be from Liverpool to the east coast of South America, thence through the Strait of Magellan and up the west coast to Panama, and through the Canal back to Liverpool. The first vessel plying in this service, the steamship *Orcoma*, is due to arrive at Balboa from south ports about July 3. If it should not be able to go through the Canal within a few days after its arrival, it will sail for Liverpool by way of the Strait of Magellan, but as soon as available the Canal route will be used for the home voyage. The *Orcoma* is a freight and passenger vessel of 11,376 tons gross burden.

The Luckenbach Steamship Company, with four steamers now plying regularly between San Francisco and Balboa, and six in irregular service along the Atlantic coast of North America, has been awaiting the opportunity to merge all ten into a regular line between San Francisco and New York. These are vessels of from 5,000 to 10,000 tons cargo capacity. Two of them, the *J. L. Luckenbach* and the *San Mateo* are under temporary charter to the Panama Steamship Line, plying between New York and Cristobal, but their charters will be revoked as soon as the Canal is opened. The steamship *Demara*, due at Balboa from San Francisco about June 16, has been loaded with its cargo for Panama on top, so that if it can be put through the Canal it can discharge its local freight quickly and proceed direct to New York with the bulk of its cargo. It is the present intention of the company to make Balboa, instead of Colon, its point of transferring freight.

W. R. Grace and Company, now operating their *Santa Clara*, *Santa Cruz*, *Santa Cecilia*, and *Santa Catalina* from New York to San Francisco around South America, will divert them through the Canal as soon as possible. The *Santa Clara*, due to arrive from San Francisco on June 17, and allowed a week on its schedule for the discharge of cargo at Balboa, including about 4,000,000 feet of lumber for The Panama Canal, is chartered to go through the Canal to New York. The same course, with less time for discharging at Balboa, is scheduled for the *Santa Catalina*, due at Balboa on July 3. The time for this line between New York and San Francisco is now about 60 days, around the continent; it is anticipated that, by the use of the Canal, it will be cut to 20 days.

The local representative of the Salvador Railway Steamship Line, recently established between Salina Cruz, Mexico, and Balboa, calling at the principal Central American ports, will send its vessels through the Canal

as soon as possible, to discharge at Colon for transfer to Atlantic vessels. This company is operating the steamships *Acajulla* and *Salvador*, and a third vessel for this service is building in England.

The management of the Harrison Line has been keeping in touch with the Canal situation and intends, as soon as possible, to divert through the Canal the steamers now plying in its "Magellan route", from Great Britain to ports on the Pacific coast of the United States and Canada. This firm also operates a "Panama route," making Colon and transferring cargo by way of the Panama railroad to Pacific lines, and a "Tehuantepec route," in which the service has been suspended on account of the troubled conditions there; it is probable that the vessels of these routes may be diverted to the Canal within a few months.

The American-Hawaiian Line, operating 26 steamships in Atlantic and Pacific trade, and already using the Canal by having cargo lightered through, has advertised its intention of sending its vessels through the Canal as soon as possible. This line had been using the Tehuantepec route. Its vessels will ply between New York, San Francisco, Seattle, and Hawaii.

Lockage of the "Allianca."

The *Allianca* of the Panama Railroad Steamship Line was passed through Gatun Locks from the Atlantic channel to Gatun Lake and return on Monday forenoon, June 8, making it the first ocean going passenger vessel to enter or pass the locks of the Canal. It carried a number of people in addition to the officers and crew, and officials who were concerned in its operation. The ship arrived in the approach channel to the locks at 6.45 a. m., and towing was begun by locomotives Nos. 641, 642, 643, and 644 at 7.17 a. m. The ship left the locks on the up lockage at 8.48 a. m., and after describing a wide circle in the lake returned to the approach. Towing on the down lockage was begun at 9.52 a. m., and the ship entered the approach channel from the lower lock at 11.33 a. m., returning to its dock at Cristobal immediately thereafter. During the progress of the vessel through the locks it was wholly under the control of the lock operating force. Dynamometers were attached to the towing lines during a part of the trip to register the pull of the towing machines. The Canal tug *Cocoli* was locked up to Gatun Lake with the *Allianca*. The official log of the lockage is, as follows:

UP LOCKAGE.

Elevations:

- Lower level—.03 feet (sea channel) to 27.7 feet.
- Middle level—27.7 feet to 56.6 feet.
- Upper level—56.6 feet to 84.9 feet.

Operations:

- 7.27. Gates Nos. 7 and 8 closed; were opened night before.
- 7.28.30. Rising stem valve No. 210 opened.
- 7.29. Rising stem valve No. 211 opened.
- 7.30. Rising stem valve No. 232 opened.
- 7.32. Rising stem valve No. 233 opened.
- 7.45. Gates Nos. 15 and 16 opened.
- 7.55. Gates No. 15 and 16 closed.
- 7.57.30. Rising stem valve No. 232 closed.
- 7.58. Rising stem valve No. 233 closed.
- 7.59. Rising stem valve No. 248 opened.
- 8.02. Rising stem valve No. 249 opened.
- 8.12. Gates Nos. 23 and 24 opened.
- 8.12. Gates Nos. 27 and 28 opened.
- 8.21. Gates Nos. 23 and 24 closed.
- 8.21. Gates Nos. 27 and 28 closed.
- 8.23. Rising stem valves Nos. 248 and 249 closed.
- 8.25. Rising stem valve No. 260 opened.
- 8.27. Rising stem valve No. 261 opened.

8.39. Gates Nos. 36 and 40 opened.

8.39.30. Gates Nos. 33 and 39 opened.

DOWN LOCKAGE.

Elevations:

- Upper level—84.9 (Gatun Lake level) to 55 feet.
- Middle level—55 feet to 28 feet.
- Lower level—28 feet to level of sea channel.

Operations:

- 9.38. Rising stem valve No. 260 closed.
- 9.39. Rising stem valve No. 261 closed.
- 10.04. Gates Nos. 36 and 40 closed.
- 10.04.30. Gates Nos. 33 and 39 closed.
- 10.06. Rising stem valve No. 248 opened.
- 10.07. Rising stem valve No. 249 opened.
- 10.18. Gates Nos. 27 and 28 opened.
- 10.18. Gates Nos. 23 and 24 opened.
- 10.23. Rising stem valve No. 248 closed.
- 10.24. Rising stem valve No. 249 closed.
- 10.29. Rising stem valve No. 232 opened.
- 10.30. Rising stem valve No. 233 opened.
- 10.40. Gates Nos. 15 and 16 opened.
- 10.45. Rising stem valve No. 232 closed.
- 10.46. Rising stem valve No. 233 closed.
- 10.50. Gates Nos. 15 and 16 closed.
- 10.52. Rising stem valve No. 210 opened.
- 10.53. Rising stem valve No. 211 opened.
- 11.10. Gates Nos. 7 and 8 opened.
- 11.15. Rising stem valve No. 210 closed.
- 11.16. Rising stem valve No. 211 closed.
- 11.32. Gates Nos. 7 and 8 closed.
- Lower guard or sea gates were already opened and vessel passed out into the approach channel.

"Ancon" To Pass Gatun Locks.

The steamer *Ancon* will be locked through at Gatun on Thursday forenoon, June 11, the operation being similar to that of the *Allianca*.

Miraflores Lake to go to Normal Level.

The valves controlling the auxiliary culverts at Pedro Miguel Lock were opened on Monday evening, June 8, and water from Gatun Lake will be allowed to flow through them uninterruptedly until Miraflores Lake reaches its normal level of 54½ feet. The elevation of the lake's surface at the time the valves were opened, about 5.15 p. m., was 50.77 feet. The highest level to which the lake had attained previously since the closing of Miraflores Spillway was 52.61 feet in February of this year.

Sale of the "Acapulco."

The steamship *Acapulco* of the Pacific Mail Steamship Company has been sold to Capt. J. H. Rinder of San Francisco. This vessel was built at the yards of Harlan and Hollingsworth in Wilmington, Del., in 1873, and had been many years in service along the west coast. Its last arrival at the port of Balboa was on September 12, 1913, and it left on its last voyage to San Francisco on September 20. It has been succeeded in the Balboa-San Francisco service by the *Newport*.

Alterations to the "Advance."

It was stated in THE CANAL RECORD of April 15, 1914, that the steamship *Advance*

Estates Being Settled.

The following estates of deceased employees of The Panama Canal or the Panama Railroad Company are now in process of settlement by the office of the Administrator of Estates, Ancon, C. Z., and any claims against these estates, or any information which might lead to the location of heirs, or to the recovery

Name.	Check No.	Native of	Isthmian residence.	Employed by	Date of Death.
Rafael Castro.....	215812	Ecuador.....	Panama.....	Dredging Div....	May 29

of the Panama Railroad Steamship Line would be converted into a freight vessel, with an insulated magazine, for carrying explosives, and that the vessel would be operated on a "Wildcat" schedule. Since that time, the approved plans have been changed. The magazine for explosives was installed, but the accommodations for passengers were not removed. For the present, the *Advance* will be continued in passenger service, but whenever it should be necessary to ship explosives on the vessel, passengers will not be carried on such voyages.

New Office Building for Hamburg-American Line.

Foundations are being completed for the new office building of the Hamburg-American Line, on a lot on the waterfront of Cristobal, just east of the entrance to the new terminal piers and adjoining the new office building of the United Fruit Company. The work is being performed by R. W. Hebard and Company, Incorporated, who also prepared the plans for the building.

The site is a reclaimed area, adjoining Roosevelt avenue, and piles were driven to support the foundations. The building will be of reinforced concrete, two stories high and finished in an adaptation of American colonial architecture, with heavy Doric, 2-story columns flanking the verandas. The ground floor will be occupied by offices for the manager and the cashier and the claim, filing, and freight departments. The second floor will be made into an apartment for the local manager.

Postal Savings Transactions.

A statement of postal savings transactions at Canal Zone post-offices for the month of May, follows:

OFFICE.	Amount issued.	Amount paid.
Ancon.....	\$14,607.00	\$15,714.00
Balboa.....	23,144.00	25,674.00
Corozal.....	21,680.00	30,887.00
Cristobal.....	10,526.00	9,420.00
Culebra.....	4,230.00	7,326.00
Empire.....	5,362.00	10,540.00
Gatun.....	10,408.00	11,509.00
Las Cascadas.....	2,103.00	1,735.00

Station B.....	780.00	1,566.00
Total.....	109,580.00	136,246.00
Balance on hand May 1, 1914.....	\$555,027.00	
Deposited during May, 1914.....	109,580.00	
Withdrawn during May		\$136,246.00
Balance on hand June 1, 1914.....		528,361.00
	\$664,607.00	\$664,607.00

of property, bank deposits, postal savings, or postal money order deposits, or any other moneys due them, should be presented at his office at once, in order that the estate may be settled as soon as possible. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once.

SOCIAL LIFE OF THE ZONE.

Close of Canal Zone High School Year.

The last month of the Canal Zone high school will be marked by several events in connection with the closing year of the high school life of the graduating class. The functions will begin with senior class day to be held at Pedro Miguel clubhouse on Friday evening, June 12. The program follows:

Song—"Tis our festal day".....High school
Class history.....William Fraser
Piano solo.....Dorothy Magauson
Poem.....Miriam Stevens
Song—"Awake! arise!".....High school
Class prophecy.....James Loulan
Song—"All through the night".....Girls' chorus
Class will.....Eleanor Comber
Piano solo.....Marion Blake
"A senior's lament".....Blossom Compton
Song—"Italia".....High school

Music will be furnished by the Guatemalan orchestra.

The class president is Eva Swinehart.

A 3-act comedy entitled "The strange adventures of Miss Brown," will be played by the pupils, according to this schedule: Empire clubhouse, Tuesday evening, June 16; Pedro Miguel clubhouse, Thursday evening, June 18; Corozal clubhouse, Friday evening, June 19; National Theatre, Panama, Saturday evening, June 20, by courtesy of the Government of Panama; Gatun clubhouse, Monday evening, June 29; Cristobal clubhouse, Tuesday evening, June 30. The cast of the play contains 16 characters, who are being trained by Miss Jessie E. Daniels, principal of the Ancon school, and Miss Marie E. Bayless, principal of the Gatun school. The commencement exercises will be at the National Theatre, Panama, on Friday evening, June 26, beginning at 8.30 o'clock.

The annual number of the high school paper, *The Zonian*, will be ready for issue on senior class day. The receipts from the performances of "The strange adventures of Miss Brown" will be used to defray its cost.

Church Notes.

The Church Periodicals Club of New York City has sent a large donation of books to the Sunday school of St. Luke's Hospital chapel, and these books have been placed on the shelves for distribution. Owing to a conflict in time with the girls' club, the library hours have been changed from Wednesday afternoons, to Saturday mornings from 8.30 to 11 o'clock. The small library of books for mission study have been received. These books will be used primarily by the mission study class, but those interested in the work of the Christian church in foreign mission fields may withdraw books upon application to the chaplain.

The junior auxiliary meets in the Sunday school room at St. Luke's chapel on the first and third Wednesdays in each month, and in Ancon Hall for physical culture, on the second and fourth Wednesdays. It has been decided to open the physical culture class to nonmembers on payment of 25 cents, United States currency, a month. Instruction in physical culture to members is free. Application for paid membership in the class must be made to a member of the club.

The Woman's Altar Guild of St. Luke's Hospital chapel met at the home of Mrs. Joseph Bucklin Bishop on Tuesday morning, June 2. This is the only meeting to be held in June. Over five dozen garments for

church institutions in the United States have been made since the beginning of Lent. The guild has entered upon a few weeks' vacation.

Children's Day, June 7, was observed in the Gatun Sunday school, when an interesting program was given at the service which was held in the Government chapel in the evening. All the pupils in the school participated in the exercises, and, in addition, pieces were recited by two members of the Tenth Infantry.

The Rev. Edward J. Cooper, rector of Christ Church, Colon Beach, will return from his annual vacation spent in Guatemala on Friday, June 26. The Woman's Altar Guild of the parish is preparing to hold a sale for the purpose of raising money for the payment of its quarterly assessment for church improvements.

The ladies' aid society of the Union Church, Cristobal will hold a bazar for the sale of useful and fancy articles, cake, candy, and ice cream. The proceeds are to go toward purchasing books for the Sunday school library. The bazar will be held on Saturday afternoon and evening, June 13, at the Union chapel, Cristobal.

Activities at St. Ferdinand's Church, Empire.

The parish festival of St. Ferdinand's church, Empire was celebrated on Saturday and Sunday, May 30 and 31. The West Indian section of the parish held an entertainment in the parish hall on Saturday evening. On Sunday, solemn high mass was celebrated at 9.30 a. m. Representatives of the Order of St. Vincent, the Reverend Visitor, and the Reverend Superior of Guatemala assisted at the services. The parish priest, the Reverend Father Allot, has returned from his visit to San Salvador, where he went in April on business connected with the church.

Call to New Union Church Pastorate.

A call to the pastorate of the Union Church of the Canal Zone has been accepted by the Rev. William Frammer of Covington, Ky. Mr. Frammer will assume his duties on his arrival on the Isthmus.

Woman's Board at World's Fair.

The Panama Branch of the Woman's Board of the Panama-Pacific International Exposition is open to receive applications for membership. Membership in the branch costs \$2, and the pin, which is the offi-

cial badge of the woman's board, costs \$1. Membership in the branch entitles the holder to the use of the tea and rest rooms in the California Host Building, and gives official standing to women visiting the exposition. The money for membership and pins will be devoted to the traveler's aid fund, which is being formed for the purpose of carrying on work for the protection of women and young girls attending the exposition. Membership in the branch does not depend upon club membership; the branch is an independent organization, and there will be no meetings. Membership cards will be issued on payment of dues, and later, cards of admission to the rooms in the California Host Building will be forwarded to each member. Further information concerning membership may be obtained upon application to Miss Beattie, Ancon.

Applications for Church Sites at Balboa and La Boca.

Applications for sites for the purpose of building churches in the permanent town of Balboa, and the new town of La Boca, have been received by the committee appointed by the Governor of The Panama Canal for the consideration of this matter. The following churches and denominations were represented in the applications: Methodist Episcopal, Wesleyan Methodist, Baptist, the Southern Baptist Convention and the National Baptist Convention, Episcopal, and Roman Catholic. The Union Church of the Canal Zone has applied for building site and a site for the projected residence for its minister. The Salvation Army, which comes under the head of churches, was also an applicant for a site for the erection of a hall for public meetings. Other applicants for sites were the agent of the American Bible Society, and a representative of the Masonic fraternity.

Knights of Columbus.

A regular meeting of Cristobal Council, Knights of Columbus, will be held in the Cristobal lodge hall, building No. 1, on Sunday, June 13, at 2 o'clock.

A. P. E. DOYLE, *Grand Knight*.

CRISTOBAL, C. Z., June 7, 1914.

Panama Council, No. 1371, Knights of Columbus, will hold its regular meeting in Ancon lodge hall, on Sunday, June 13, at 10.30 a. m.

THOS. F. CHARNIEV, *Grand Knight*.

BALBOA, C. Z., June 7, 1914.

Dry Season Rainfall.

The precipitation during the dry season recently drawn to a close has been below normal everywhere except on the Pacific coast, where it has been slightly above the average. As compared with the corresponding period of 1912-1913, less rain fell throughout the Zone, although the Pacific coast had an increase in rainfall amounting to more than one hun-

dred per cent of the amount recorded last year.

The following table shows the accumulated rainfall at selected stations, and for the whole Canal Zone, during the period from December, 1913, to April, 1914, inclusive, compared with the fall during the dry season of 1912-1913, and with the station normals for the same period:

STATION	Normal Rainfall Dec. to April.	Years of Record	Accumulated Dec. 1913 to April 1914.*	Per cent of Normal	Accumulated Rainfall Dry Season 1913 (Dec. 1912 to Apr. 1913.)	Per cent of Normal.
Ancon.....	9.36	17	9.98	107	4.53	49
Culebra.....	13.83	24	2.71	20	8.50	61
Gamboa.....	13.64	30	4.09	30	8.11	59
Alhajuela.....	12.08	15	3.63	30	4.13	35
Colon.....	23.30	44	14.25	61	23.41	100
Porto Bello.....	38.95	7	18.68	48	22.90	59
Average for Zone (six stations).....	18.53	..	8.89	49	11.92	60

*Settled dry season weather did not begin this year until January, but the period from December to April, inclusive, is used for comparison with the previous dry seasons, some of which have continued from December to April, inclusive.

EXECUTIVE ORDER

Setting Aside Area of Land In Canal Zone for Radio Station and Other Naval Uses.

The area of land hereinafter described, situated in the Canal Zone, is hereby set apart and assigned to the uses and purposes of a radio station and other naval purposes under the control of the Secretary of the Navy; but said area shall be subject to the civil jurisdiction of the Canal Zone authorities in conformity with the Panama Canal Act.

The said area is described, as follows:

BALBOA, NAVAL RADIO STATION.

Starting at a concrete and rail monument marked "W" on the map, and located at the southeast corner of the oil fuel storage site on Balboa dump, go on an azimuth of 307°-40' for a distance of 1,050 feet to a similar monument marked "Z" on the map; thence on an azimuth of 217°-40' for a distance of 7,800 feet to a similar monument located on top of the dump on the shore of the bay and marked "V" on the map; thence along the top of the dump following the shore to a similar monument marked "Y" on the map; thence on an azimuth of 37°-40' and for a distance of 1,120 feet to the point of the beginning;

all as shown by the blue print, No. 3836, dated January 30, 1914, issued by the Department of Construction and Engineering, Isthmian Canal Commission, office of the Assistant to the Chief Engineer.

WOODROW WILSON.

THE WHITE HOUSE,
May 26, 1914.

[No. 1948.]

English Company Desires Representation at Canal Opening Ceremonies.

The West India Company of London, through its secretary, Algernon E. Aspinwall, has expressed its desire to be represented at the official opening of The Panama Canal. This company is the doyen of the colonial bodies in England, having been established before 1750; it was incorporated by Royal Charter by King Edward VII in 1904. The request has been referred to the newly appointed committee for the formal and official opening of The Panama Canal for proper consideration.

Panama Railroad Laborer Awarded Life-saving Medal.

The Governor of The Panama Canal has presented to Timothy Williams, check No. 57427, a colored laborer in the employ of the Panama Railroad Company, a medal, granted by the United States Treasury Department for the saving of human life. On August 18, 1913, a French colored dock laborer named Joseph Louis, in the employ of the Panama railroad, was knocked into the water from Dock 11 by a sling of iron pipes. Williams, who was nearby, jumped in and rescued the man from drowning at the risk of his life.

Homicide.

Patrick J. Garvin, a naturalized American employed as a molder in the Mechanical Division at Balboa, was fatally injured about 4.30 p. m., on Sunday, June 7, while sitting in the bar of the American Hotel in Panama, by a blow delivered on the head by a man named William Hopkins. His assailant made his escape, but was afterward captured by the Canal Zone police in the vicinity of East Balboa. Extradition of his person has been

asked for by the Panama authorities. The victim was a native of St. Johns, New Brunswick, but made his home at Yonkers, N. Y., for several years before coming to the Isthmus. He was 48 years of age, unmarried, and had been in the Canal service since August 7, 1906. His mother, Mrs. Elizabeth Garvin, and a brother, John J. Garvin, reside at No. 60 Warburton avenue, Yonkers. The funeral was held on Monday afternoon at the Ancon Catholic chapel, under the auspices of Local No. 131 of the Iron Molders Union. Interment was at the Corozal cemetery.

Visit of the "Nuernberg."

The German cruiser *Nuernberg*, Commander Von Schoenberg, arrived in Panama Bay from Mazatlan, Mexico on Saturday, June 6, for the purpose of coaling and exchanging a part of the crew for new men due to arrive on the Hamburg-American steamer *Schwarzwald*. The officers of the vessel were afforded the usual facilities for seeing the Canal.

Emigration Figures for May.

The May report of the quarantine service shows an excess in emigration from the Isthmus during May of 626 persons, a falling off as compared with the preceding month of 871. The total net emigration from the Isthmus during the 10 months ending May 31, 1914, was 14,883, or an average of about 1,488 persons a month. The greater part of the people leaving the Isthmus for good consisted of Canal employees.

The total number of steamship passengers embarking from the ports of Colon and Cristobal for foreign ports during May was 4,414, consisting of 2,109 cabin, and 2,305 steerage passengers. The number of persons landing from foreign ports was 3,566, consisting of 1,754 cabin, and 1,802 steerage passengers. The excess of persons who embarked over those who landed from these ports was 848.

Europe contributed the fewest immigrants in the steerage class of any month since the present exodus began, only 21 arriving during May. The greater part of the deck passengers, as usual, came from the West India islands, the total being 1,307. Forty-eight steerage passengers disembarked at Colon from Colombia; 41 from Cuba; 121 from Guatemala; 94 from Costa Rica, and 69 from the United States. The number of persons arriving at the Atlantic ports "In transit," mostly all tourists, was 1,544, as compared with 1,512 in April.

The number of persons arriving at the ports of Panama and Ancon from foreign ports during May was 711, consisting of 573 cabin, and 138 steerage passengers. The number of persons embarking for foreign ports was 489, consisting of 340 cabin, and 149 steerage passengers. The excess of those who landed over those who embarked was 222.

The total number of vessels arriving at Colon during May was 106; at Ancon, 26.

Anemometer and Anemoscope at Darien Radio Station.

An anemometer and anemoscope are to be installed shortly at Darien radio station by forces of the meteorological and hydrographic section of the Department of Operation and Maintenance. This is for the purpose of observing velocities and direction of wind currents during the erection of the 600-foot towers of the station.

The removal of the superstructure of the former pile trestle, bridge No. 57½, at Paraiso,

has been completed. The anchor bolts, concrete foundations, etc., at the bottom of the Canal are being removed with dynamite, in order to make the channel uniform.

Change in Location of District Quartermasters' Offices.

The office of the district quartermaster at Cristobal has been moved from its old location north of the shops, to a building in front of the ice plant, to one side of the depot commissary's office. The lower floor of the commissary at Gatun has been converted into an office for the district quartermaster in that village.

Joint Land Commission.

The following is a calendar of cases set for hearing by the Joint Land Commission for the week ending June 20:

TUESDAY, JUNE 16.

Docket No.	Claimant.	Docket No.	Claimant.
210	Eusebio A. Morales	240	Cabino Acosta
213	Edward Brice	246	Juan Gonzalez
216	Alexander White	247	Lucia Acosta
238	Luisa Castillo	250	Juan Tinco
239	James Canady	251	Juana Josefa Marina

WEDNESDAY, JUNE 17.

253	Filomena Bacus	361	Juan Dias
254	Joseph Lyon	375	Santos Vegambre
262	Fabian Bayonne	387	Sam Marmorsin
345	Cenon Cortes	388	George Beopood
354	David Kerr	389	Frank Thompson

J. A. LANGSTON,
Secretary, pro tempore.

Red Cross Finances.

The financial statement of the Canal Zone Chapter, American National Red Cross for the month of May is, as follows:

RECEIPTS.

May 1, Balance on hand.....	\$4,030.10
May 3, Membership dues.....	1.00
May 29, Interest for March, April and May.....	20.84
Total receipts.....	\$4,051.94

DISBURSEMENTS.

May 2, Relief of former employe.....	15.00
May 13, Relief of a Norwegian in ill health.....	50.00
May 28, Postage, secretary.....	2.00
Total disbursements.....	\$67.00

May 31, Balance on hand.....	\$3,984.94
------------------------------	------------

T. L. CLEAR,
Treasurer.

Approved:
ERNEST E. LEE,
Acting Chairman.

Strangers Club.

Saturday evening, June 13, has been appointed as the date for the next informal dance of the Strangers Club.

FRANK SCOTT, Chairman,
Entertainment Committee.

Cristobal Dancing Club.

The next regular dance of the Cristobal Dancing Club will be held on Saturday evening, June 13, at the Cristobal clubhouse.

WM. H. MARSH, Secretary.

The gasoline launch *Santa Rita* has been transferred from the Division of Terminal Construction, Atlantic section, to the Department of Health, and will be used in the quarantine service for the ports of Balboa and Panama.

A shipment of champagne donated by the Italian Swiss Colony of San Francisco has been received on the Isthmus, the shipper advising that it was sent for use at the ceremonies in connection with the passage of the first ship through the Canal.

TREES FOR ORNAMENTATION.

Mr. Henry Pittier Submits List and Advocates Use in Adornment of Permanent Towns.

The following communication relative to ornamental trees suitable for adornment of the permanent Canal Zone villages has been received at the office of the Governor from Mr. Henry Pittier of the Bureau of Plant Industry, United States Department of Agriculture, who is now on the Isthmus:

UNITED STATES DEPARTMENT OF AGRICULTURE, BUREAU OF PLANT INDUSTRY.

PANAMA, R. P., May 21, 1914.

Col. GEO. W. GOETHALS,

Governor of the Panama Canal,
Culebra, C. Z.

SIR: As a modest contribution toward the embellishment of the new towns along the Panama Canal, I propose to form a list of the ornamental trees, fruit trees, palms, and shrubs which could and should be used in parks and private grounds, as well as along roads.

If it should be the desire of the Panama Canal Government, I am also willing to help in procuring seeds, establishing nurseries, and supervising the planting to the extent permitted by my other duties. In doing so, I will only act in accordance with the instructions received from the Honorable the Secretary of Agriculture, that I should put myself at the disposal of the Canal authorities in case my collaboration should be needed in connection with agricultural problems of any kind.

If allowed to do so, I would suggest that in the choice of trees and plants preference be given to native species, so that in time the several parks and grounds would become a sort of epitome of the flora of the country. It also seems advisable that the work undertaken by Lieutenant-Colonel Mason, former superintendent of Ancon Hospital, of labeling the trees and plants, should be continued. It implies a small expense, of no amount if compared with the useful information which is spread in that way.

I shall be glad to help in collecting or procuring seeds for the nurseries, at least while I am on the Isthmus. In most cases, this can be done free of expense, but in others a small amount may have to be paid.

As to the question of the nurseries and other ones with which I may become connected, it would, of course, be necessary that I be given the necessary authority in regard to supervision.

I am giving a first list of ornamental trees, which will be followed as soon as possible with the ones of palms, fruit trees, and shrubs.

Respectfully,

H. PITTIER.

Ornamental Trees.
1. VERTICILLATAE.

Casuarinae sp. pl.—Pine-like trees of small or middle size, native also of Australia. They are practically shadeless, but form a striking feature of many parks in the semiarid districts of the tropics. There are several species.

2. URTICALES

Morus Alba, L.—Mulberry tree—The common or white mulberry tree thrives perfectly in the tropics. It is a quick growing, shapely tree, with a dense foliage and cool shade, and quite adapted for shrubby grouping in small parks. It is propagated by cuttings, and as there are several specimens of the species in Panama, these could be easily procured.

Ficus sp. pl.—Fig trees—The group of the wild fig tree is represented in Panama by at least 30 indigenous species, to which should

be added three or four introduced ones. All are hardy trees, more or less indifferent to soil and climate, of very rapid growth and mostly large size. Among the introduced species may be mentioned *Ficus elastica*, the favorite india rubber plant cultivated indoors as a favorite pot shrub in the United States, but reaching in the tropics a considerable size. In order to keep them with the usual large leaves, they

must be cut back all the time. Other desirable species are *Ficus religiosa*, the sacred tree of the Buddhists, of which there are good specimens in the Cathedral Park in Panama, and *Ficus rhizophoras*, which bears in the trunk and limbs thick tufts of roots.

Castilla panamensis, Cook—Panamanian rubber tree—Of little economical value, but interesting and ornamental when not bared of

LABOR FORCE AND QUARTERS IN APRIL.

The force report for April 29 shows the actual working force of The Panama Canal on that date to have been 27,391; of the Panama railroad, 4,262; and of contractors, 41; a total working force of 31,694, a decrease of 507, as compared with the statement for March 25. The gold force on the Canal work, composed almost exclusively of white Americans, was 4,429, divided, as follows: The Panama Canal, 4,005, and Panama railroad, 424. The force in the commissary department is counted with the Supply Department. A statement of The Panama Canal force, by departments, follows:

DEPARTMENT OR DIVISION.	SILVER EMPLOYEES*											Total silver	Total gold.	Grand total.		
	Artisans					European laborers		West Indian laborers.								
	Monthly	44 cents.	32 cents.	25 cents.	20 cents.	16 cents.	20 cents.	16 cents.	20 cents.	16 cents.	13 cents.				10 cents.	7 & 5 cents.

Total	4,593	1,737	1,668	1,656	56	96	5,911	975	1,367

(1) Includes Sabana police station, Taboga Island, Culebra Island, and Palo Seco. (2) Includes Miraflores. (3) Includes 60 Panamanians. (4) Includes Empire, Las Cascales, and Bas Obispo. (5) Includes eight American negroes. (6) Includes Colon Beach and Colon Hospital. (7) Includes 25 East Indians, nine American citizens, and 94 Panamanians. (8) Includes 20 Coast Artillery men. (9) Includes nine Asiatics. Gold force of contractors (included above), 64 bachelors.

its leaves. Judging by the few specimens at Ancon, it can be used to advantage in park landscapes.

3. PROTEALES.

Grevillea robusta, R. Br.—This is an introduced species, a native of eastern Australia. Although it is quick growing and very ornamental, and although it grows very well from low altitudes up to 6,000 feet above sealevel, it is hardly known in Panama. There is a striking specimen of it in the Ancon Hospital grounds (near Ward 3). It is a good timber, often used for reforestation.

4. ROSALES—LEUCOMINOSAE.

Dialium divaricatum, Vahl.—Wild tamarind—The wild tamarind of the natives of Darien. It is a pretty, very ornamental tree, worth the while being propagated. The wood is tough and hard and takes a fine polish. As it is primarily a forest tree, growing usually on hills, it should be tried in shaded and slopy exposures.

Tamarindus indica, L.—The tamarind—A native of the East Indies now acclimatized all over the tropical belt. When fully grown it has a noble appearance and gives a fine shade. Its natural habitation is along the seashore, but it does fairly well on hillsides. It forms a fine group by itself and should always be planted in isolated individuals, in the center of small squares, etc.

Poinciana regia, L.—The flamboyant—A native of the West Indies and very likely one of the earliest importations into the Ancon Hospital grounds. It is deciduous, and keeps blooming profusely all through April and May, forming bright scarlet spots on the green background of Ancon Hill. It does not rise much above the ground and has a flat spreading crown, which is very convenient for shade in grass plots. On account of its hardness, it can be grown almost anywhere, except in marshy ground in the *tierra caliente*.

Pitheciobium saman, Benth.—The rain tree—The rain tree or Guango of the West Indies is also a native on the Pacific coast of Central America. It is known from Nicaragua to Costa Rica, but I have not observed it in wild condition in Panama. The Roman Catholic church at Ancon is built under the shade of a large specimen of *Saman* which shows the possibilities of the tree when planted so as to have an ample space for its growth.

5. GERANIALES.

Melia Azedarach, L.—Umbrella tree—The umbrella tree of the Southern States is a very quick growing tree with pretty lilac flowers. It could be used provisionally in parks and avenues, while the permanent species, mostly of slow growth, attain a certain size.

Swietenia Mahagonia, L.—Mahogany tree—Not only an important economical tree, but also a fine addition for park adornment, or for planting along roads. This would serve also the purpose of the people getting acquainted with a useful representative of the flora.

Vochysia ferruginea, Martius.—Chilate negro—A middle sized tree, growing on wooded hills all over the Canal Zone and in bloom in May and June. It is regularly shaped, with a straight trunk and the very abundant flowers, disposed in innumerable erect spikelets, have a very showy effect.

Hevea sp.—Para rubber tree—There are a few specimens presently seeding in the Ancon Hospital grounds. As this is a species of considerable economic value, it should be propagated. There is no reason why it could not be used in parks or along roads.

Hura crepitans, L.—Sandbox tree—The

sandbox tree is a very quick grower, almost indifferent to soil and exposure. As the trunk of the young trees are densely covered with spines and all parts contain a very caustic latex, this tree should not be allowed in private grounds, nor in close proximity of schools. It attains considerable dimensions and is hardly desirable at all, except perhaps as a temporary shade tree between permanent species of slow growth.

6. MALVALES.

Cavanillesia platanifolia, R. and P.—Cuipo—A spectacular and original feature of the Pacific Coast, south of the Canal, but hardly an ornamental tree for small parks on account of its towering size. It would do fine to form an alameda on a long stretch of straight road, and isolated specimens could be planted at a few elevated places. It is deciduous, and the abundance of its fruits, the core of which turns into a jelly mass as they reach the ground, may prove a real nuisance. The piece of *Cavanillesia* landscape near the Miraflores pond should be reserved and kept clean, as a characteristic representative of the flora of the Zone.

Ochroma Lagopus, Sw.—Balsa tree—The balsa, or West Indian cottonwood. It is one of the so-called tree weeds, *i. e.*, which appear everywhere and in large numbers when the primitive forest has been destroyed. The balsa, so-called because its wood is the best and lightest for the construction of rafts, often attains large dimensions; its leaves are broad and give a good shade and its use is indicated in most cases in a provisional way.

Sterculia carthagenensis, Jacq.—Panama tree—The "Panama," or the tree which gave Panama City its name. A straight trunk, a more or less rounded crown, large palmilobate leaves forming a dense shade, bunch of queerly built flowers, with a yellow cup-like corolla spotted with dark purple dots, and the fruits, usually five together, radiating from a thick, common peduncle, characterize this species, which is a desirable addition to the dendrological flora of tropical parks.

7. MYRTIFLORAE.

Mealeuca leucadendron, Muell.—Exotic and introduced in tropical America from South Africa, it is a hardy, quick growing tree, proper for the hillsides and sunny exposures. It gives but little shade.

Eucalyptus sp. pl.—The eucalyptus, all of Australian origin, are not exactly ornamental trees, being usually lanky and twisted, and with little or no shade. Besides, most of the numerous species require a cooler and drier climate. Some of them, however, adapt themselves to the semidry and warm climate of the Pacific side of Panama, and as these trees have the reputation of exercising certain advantageous influence on the soil and the air, their cultivation should be encouraged. There is now an eucalyptus in full bloom near the police station at Ancon, the seeds of which should be watched and gathered.

8. TUBIFLORAE.

Jacaranda filicifolia, D. C.—A slender and elegant tree, which, in March and April, covers itself with an abundance of blue flowers. It is an inhabitant of the hills and probably would not thrive on low grounds.

Tabebuia guayacan, Hemsley.—The false lignum vitae—A beautiful deciduous tree, which covers itself, in March or April, with a glorious crop of orange-yellow, jinger-shaped bells. The trunk is usually quite straight and the timber one of the hardest, and more dur-

able when in contact with the soil. This tree does not grow on low grounds, but mixed with a few specimens of *Jacaranda*, *Tabebuia pentaphylla*, *Poinciana regia*, and *Vochysia ferruginea*, Mart, it would highly contribute to the beautifying of the built-up part of Ancon Hill.

Tabebuia pentaphylla, Hemsley.—Roble de savana—A near relation to *Tabebuia guayacan* to which it resembles somewhat in habit, differing mainly by the pale pink flowers. It is less peculiar as to soil, and may be made to grow on low flats, although it would do better in the hills, mixed with other trees of profuse blooming.

9. RUBIALES.

Posoqueria latifolia, Benth.—Boca vieja—A small tree of the coffee family, the flowers of which emit at night a very sweet perfume. There are at least individuals of it in the Ancon Hospital grounds, where seed could be obtained about the middle of June. The tree likes sunny exposures.

Work on Chiriqui Railroad.

Since the formal dedication of the Chiriqui railroad by the President of Panama and other officials of the government, on April 5, the contractor for the construction of the road, R. W. Hebard and Company, Incorporated, has kept forces in the field, engaged in preliminary work. About 250 men, mostly natives, are now engaged in grading the roadbed between the port of Pedregal and David, a distance of five miles, and in the erection of laborers' quarters, warehouses, and an office building. A construction plant, consisting of 150 dump cars of 1-cubic yard capacity, and eight miles of light track, has arrived from the United States and together with practically the entire plant used in the construction of the dike at Caño saddle, No. 4, will be transferred to Pedregal. It is probable that the contractor will purchase from the Supply Department a considerable quantity of construction equipment retired from the Canal work, a survey having been made recently to determine what is available for the purpose.

Two engineering parties are now in the field, engaged in making the final location for the line, and in cross-sectioning the part which has been fixed. It is expected to have construction work thoroughly under way, with 1,000 men in the field, by August 1.

At the request of the Secretary of Public Works of Panama the contractor is making an examination of an alternate line leading into Boquete, known as the "Porterillos" route.

Effective May 1, 1914, Mr. A. K. Anderson has been appointed general superintendent of the Chiriqui railroad contract, with headquarters at David, reporting to Mr. R. W. Hebard, president of R. W. Hebard and Company, Incorporated, the railroad contractor. Mr. Anderson will have entire and direct charge of all work in Chiriqui province, including construction, engineering, and accounting, and holds, until further advice, full power of attorney for the contractor. Mr. Anderson was field superintendent in the construction of the Madeira and Mamoré railroad in Brazil.

The dispensary at Gatun has been moved into a Type-5 building, formerly used as bachelor quarters, near the post-office. The change brings it nearer the center of the present population.

FOURTH OF JULY CELEBRATION

Cristobal Selected as Place for Holding the Exercises—Chairmen of Committees.

A meeting of representatives of various departments of The Panama Canal, the Panama railroad, and of the military organizations now on the Isthmus, was held at the Hotel Tivoli on Sunday afternoon, June 7, to discuss general plans for holding a celebration of the Fourth of July. Mr. C. A. McIlvaine officiated as chairman of the meeting.

Ancon and Balboa were considered as places for holding the celebration, but it was decided that it would be impossible to provide and adequate program of sports in either of those settlements, and that the relative advantages of Cristobal were so great as to outweigh the one disadvantage of distance from the present center of population, therefore, that town was selected.

The following chairmen of committees were appointed: Capt. F. O. Whitlock, assistant chief quartermaster, entertainment; Mr. John H. McLean, disbursing officer, finance; Mr. F. R. Blunt, trainmaster, Panama Railroad Company, transportation; Mr. Ralph Sartor, music and dance; Capt. Alfred A. Maybach of the Coast Artillery Corps, Fort Sherman, fireworks; Mr. John K. Baxter of the Executive Office, publicity and printing. The chairmen were authorized to appoint the members of their respective committees, and such subcommittees as may be required.

In view of the fact that there is a surplus of about \$6,000 remaining from the funds collected for previous celebrations, it was resolved not to solicit contributions this year, but that Fourth of July tickets be sold at 25 cents each, good for one round trip from any point on the Panama railroad to either Panama or Colon, these tickets to be sold only to gold employees and Americans residing on the Isthmus. It is expected that the amount realized from the sale of special tickets, together with the surplus on hand, will not only defray all of the expenses of this year's celebration, but will leave a small surplus to be carried over to next year, as well.

It was decided that the fireworks, now on order, be distributed between Cristobal, Culebra, and Ancon, with a small allotment to the Palo Seco leper asylum, as has been the custom of previous years. The details of the distribution will be left entirely to the fireworks committee.

Obituary.

Victor S. Dahl, a Swede employed in the Dredging Division, was run over and killed by a train, about 100 yards south of the Corozal station, on Friday, May 29. He was

born in the province of Delarne, Sweden, September 22, 1884, was unmarried, and had been on the Isthmus since March, 1909. His mother, Mrs. E. Z. Dahl, resides at Lillst rup. Mocksjard, Delarne, Sweden.

Indictments in Commissary Case.

A copy of the indictments and bench warrants issued by the United States District Attorney for the Southern District of New York, together with affidavits of District Attorney W. K. Jackson of the Canal Zone, were filed in the Magistrate's Court at Ancon on Tuesday, June 2, charging Robert Wilcox, a merchant of Colon, and Isaac Brandon, a merchant of Panama, with felonious conspiracy to defraud the United States Government. The defendants appeared in court, submitted to a technical arrest, and furnished a bond in the sum of \$10,000 each. Indictments have been returned also against John Burke, former manager of the commissaries, and Jacob Salas, a merchant of Colon. The papers were served on the defendants personally in the United States, and bond was furnished by each; by the former in the sum of \$24,000. The indictments are the result of the Government's investigations in the alleged commissary irregularities.

Tourist Parties Coming.

A party of about 100 members of the Travelers' Protective Association, from Galveston, Tex., will arrive at Colon on June 18, on the steamship *Abangarez* of the United Fruit Company's line for a visit of two days to the Isthmus.

Fifty school teachers from the city of London, England, will arrive at Colon about August 16, on a vessel of the Elder and Fyffes' service.

Changes in Line Stations on Panama Railroad.

The department of bridges and buildings of the Panama railroad will erect a standard shelter and alighting platform at Darien flag station. The shelter will be built of old material, taken from storage. It will be generally similar to that recently erected at Miraflores Locks station; this shed was formerly alongside the siding, north of the Calidonia bridge, which was the Panama terminus for labor trains before the opening up of the new station.

The old Miraflores station, which stood about 200 feet from the north end of the tunnel, has been transferred to Gamboa. Alighting platforms, with shelters, have been built at the Bishop's Hollow and Tivoli road stops for trains on the Panama-Balboa line. An alighting platform has been built at the

new stopping point for Paraiso, and the erection of a shed was completed last week. The shed at Corozal station has been lengthened.

Location of New Asphalt Mixing Plant.

The asphalt mixing plant recently bought for use in connection with the construction of roads at the Pacific end of the Canal, particularly at the Balboa townsite, has been erected on the first level at Ancon quarry, east of the former cemetery grounds. It is expected that sufficient material can be delivered at the mixing plant during the night to keep it running during the day, in which case no new trackage will have to be laid, the present dump track serving all purposes.

Monthly Inspections at Fire Stations.

A special order issued from the office of the Police and Fire Division provides for regular inspection of fire stations in the Canal Zone, personnel, uniforms, and equipment (in the houses), by the fire inspector. Inspections will be made according to the following schedule: Ancon and Balboa, on the first Monday of each month; Corozal, Empire, and Culebra, on the second Monday in each month; Pedro Miguel and Paraiso, on the third Monday in each month; Cristobal and Gatun, on the fourth Monday in each month. The exact hour of the inspection will be arranged beforehand by the fire inspector with the officers in command of the respective stations.

Additional Balboa-Panama Labor Train.

Effective May 27, an additional labor train was placed in service between Balboa and Panama. It leaves Balboa shops at 11.10 a. m., making its first stop at Bishop's Hollow; returning, it leaves Panama at 12.35 p. m., with no stop between Bishop's Hollow and the shops. Its only other trip during the day is when it leaves the shops for Panama at 5.10 p. m., running express to Bishop's Hollow. This train which is intended for the accommodation of the men working on the new dock, engine house, and permanent quarters, starts from the inner yard track at Balboa, at a point north of the foundry. About 600 gold employees and about 1,500 silver employees are now transported on labor trains between Balboa and Panama.

Fares on Hamburg-American Vessels.

The agent of the Hamburg-American Line at Colon announces that, effective June 1, 1914, no more quarter fares for children will be charged, and that on and after that date children from three to 12 years of age will be required to pay half fare.

CLASSIFIED EXPENDITURES—ISTHMIAN CANAL COMMISSION.

A statement of classified expenditures of the Isthmian Canal Commission to February 28, 1914, follows:

PERIODS.	Department of Civil Administration.	Department of Law.	Department of Sanitation.	Department of Construction and Engineering.	General Items.	Fortifications.	Total.
Total to June 30, 1909.....	3,427,090.29	9,673,539.28	69,622,561.42	78,022,606.10	160,745,727.09
Total—Fiscal year, 1910.....	709,351.37	1,803,049.95	26,300,167.05	2,863,088.83	31,675,648.20
Total—Fiscal year, 1911.....	755,079.44	1,717,792.62	27,477,776.19	3,077,959.72	33,048,647.97
Total—Fiscal year, 1912.....	820,348.37	24,729.16	1,620,391.12	28,897,738.10	2,819,926.53	1,212,881.66	35,349,465.14
Total—Fiscal year, 1913.....	681,389.06	20,253.11	1,435,400.96	33,017,852.99	1,063,322.52	1,901,175.36	38,119,644.50

OFFICIAL CIRCULARS.

Port Captains.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., May 25, 1914.

CIRCULAR No. 660-11:

1. The captains of the ports, under the Superintendent of Transportation, will be charged with the general supervision and enforcement of the rules and regulations relating to the navigation of the Canal, terminal ports, and waters adjacent thereto; with the enforcement of harbor regulations, berthing, and mooring of vessels, inspection and admeasurement of vessels, pilots, dispatch and transit of vessels through the Canal, and will have general supervision and direction over all shipping and floating equipment which has not been assigned to some other division.

2. They shall have supervision over the mooring space of all wharves used for commercial purposes, which are not specially assigned to other Canal departments.

3. They will be charged with the entrance and clearance of all commercial vessels that enter or clear in the terminal ports of the Canal Zone.

4. The offices of the captains of the ports shall be general clearing houses for the transaction of business with shipping, through which the bills to vessels from the various departments of The Panama Canal and the Panama Railroad Company are presented for settlement, and to facilitate this there shall be a representative of the collector in or near the offices of the captains of the ports.

5. They shall assist the various departments of The Panama Canal in the delivery of stores, supplies, provisions, fuel, etc., and furnish such floating transportation as may be necessary when called upon to do so.

6. They shall collect, prepare, and keep corrected to date, all information in regard to vessels entering Canal waters, including names, nationality, line or company, measurement, tonnage, character of cargo, time of arrival and departure, port of departure and destination, and all other information in relation thereto which may be of interest.

7. They shall be prepared, as far as practicable, to keep all other departments informed on matters of interest to them in relation to shipping, and to furnish shipping with information in relation to Canal affairs.

8. They shall furnish tugs for towage through the Canal, handling vessels, and shifting berths, as may be necessary, and shall be prepared to furnish tugs, barges, lighters, and other floating equipment for the use of vessels in the terminal ports, or for other departments in any part of the Canal waters.

9. They shall keep on hand a set of charts, corrected to date, a light list, sailing directions, and such other data as are usually kept in the United States Branch Hydrographic offices, and be prepared to give information to masters and others in relation to the navigation of Canal waters and the usual steamship routes.

10. They shall keep standard time of the 75th meridian, corrected to date, and furnish chronometer comparisons when requested.

11. They shall assist in protection against fire of shipping in the harbor, the wharves, and all buildings along the water front.

12. Through the pilots, tug masters, and others, they will carefully note any accidents, collisions, groundings, or damages to vessels, floating equipment, wharves, aids to navigation, etc., which may be the cause of complaint or be liable for damages, and be prepared to give evidence or recommend adjustment, as the case may warrant.

13. Vessels in Canal waters should address inquiries regarding these rules, tolls, other charges, supplies, and similar matters, to the captains of the ports.

GEO. W. GOETHALS,
Governor.

Payment for Services for Vessels, Employees, and Others.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 1, 1914.

CIRCULAR No. 672:

CASH PAYMENT OR DEPOSIT REQUIRED.

1. No manufacturing or repair job shall be undertaken, or miscellaneous service rendered, by The Panama Canal unless cash is paid at the time the service is rendered or work performed, or a deposit is made in cash or in the form of a certified check on a bank satisfactory to the Auditor, to cover the estimated cost of the work including the usual surcharges and approximately 10 per cent additional with the exceptions hereinafter noted.

INDEBTEDNESS OF CANAL OR RAILROAD SECURITY.

2. The current indebtedness of The Panama Canal or the Panama Railroad Company to any contractor with the Canal or railroad company, or to any steamship

company, will be considered as security for the payment of bills for services to the amount of such indebtedness.

HOSPITAL, ETC., TREATMENT.

3. Necessary hospital, surgical, and medical treatment may be furnished to employees and families, and to others in emergency cases, without requiring a deposit in advance.

QUARANTINE SERVICE.

4. Until otherwise provided, quarantine charges may be collected in accordance with the method in effect prior to April 1, 1914.

CHARGES FOR BOARDING ANIMALS IN CORRALS.

5. Monthly charges for corral service shall be paid in advance on or before the 5th of each month. Before an animal is placed in a corral, the charges for the first calendar month, or if the animal is placed in the corral after the first of the month, the charges for the remainder of the month shall be determined and paid in accordance with the rules relating to rental of quarters.

6. The monthly charge will not be reduced and no refund will be made unless an animal is removed from the corral prior to the 26th of the month. In case of removal of an animal from the corral prior to the 26th, a charge will be made for five days more than the actual time the animal is in the corral, the amount due for any part of the month to be computed in accordance with the rules relating to the rental of quarters.

REQUESTS FOR WORK.

7. Requests for the performance of work by the Supply Department will be submitted either to the Chief Quartermaster directly, or through the nearest district quartermaster.

8. Blanket authority may be given by the Chief Quartermaster for "Shoeing animals and services of the veterinarian," and for "Moving personal or household effects of employees." For other services, special authority shall be issued in each case.

9. Requests for the performance of shop work will be made direct to the superintendent, Mechanical Division.

10. For pilots and for service of tugs in taking vessels in or out of harbors and in changing their positions, application should be made to the port captain under whose direction such services will be performed.

ADVICE OF SECURITY.

11. The Auditor will advise departments and divisions as to the security necessary or available to cover the cost of work for which request is made.

GEO. W. GOETHALS,
Governor.

Operation Construction Railways Under Panama Railroad.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., May 28, 1914.

CIRCULAR No. 660-13:

1. Effective June 16, 1914, all standard gage transportation of The Panama Canal, as regards operation only, will be placed under the transportation department of the Panama railroad, with Mr. F. R. Blunt as superintendent of railroad transportation.

2. The maintenance of such standard gage railroad tracks of The Panama Canal as are not under the immediate jurisdiction of an existing construction division, will likewise be transferred to the Panama railroad, effective June 16, under Roadmaster Connolly.

3. Any further directions or information necessary in the execution of the foregoing will be given later.

GEO. W. GOETHALS,
Governor, The Panama Canal,
President, The Panama Railroad Company.

Notaries Public.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., April 1, 1914.

CIRCULAR No. 661-1:

The notaries public of the Canal Zone in office on March 31, 1914, are hereby reappointed as such notaries public to continue in office to the end of their respective terms to which they were heretofore appointed, and they shall have the same powers and duties as those exercised by and imposed on the notaries public of the Canal Zone under preexisting laws. They shall continue to use their present official seals and to charge and collect the fees authorized under the preexisting laws and orders.

GEO. W. GOETHALS,
Governor.

Tonnage Certificates.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., May 26, 1914.

CIRCULAR No. 673:

1. It is important that vessels which expect to use The Panama Canal should provide themselves with the proper tonnage certificate, based upon the rules laid

down for Panama Canal measurement. The rules, regulations, and laws which govern this measurement vary from those for similar measurement on the Suez Canal, and in the United States and foreign countries, and vessels require a remeasurement, in order to conform to the Panama rules.

2. The Collector of Customs at New York, the collectors in some of the other large cities of the United States, and certain properly designated officials abroad have been authorized to measured vessels under the Panama rules and issue the required certificate; and, in order to avoid delay and measurement upon their arrival at the Canal, it is strongly recommended that all vessels provide themselves with the proper certificate before their arrival in Canal waters.

3. In case a vessel has failed to provide herself with the proper tonnage certificate, it will be of great assistance and save time if she be provided with a full set of blue prints of her plans and a copy of the measurements which were made when she received her tonnage certificate, and also the tonnage certificate itself.

4. Vessels which have the proper certificate will probably suffer no delay in transit, but those which are not so provided will be delayed until the proper measurements can be made.

5. Foreign vessels may be measured not only in their home ports, but also in the Port of New York and probably in other large American ports, without any additional charge, but those desiring such measurement should give sufficient notice in advance and appoint a date when they will be empty, so as to facilitate the measuring.

6. Under any conditions the Canal authorities reserve the right to check and correct any measurement or certificate issued elsewhere.

GEO. W. GOETHALS,
Governor.

Treatment in Hospitals and Elsewhere.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 1, 1914.

CIRCULAR No. 618-Revised:
EMPLOYEES OF THE PANAMA CANAL AND THE PANAMA RAILROAD COMPANY.

1. Employees in case of illness or injury will receive free treatment in the hospitals of The Panama Canal, except in cases of alcoholism or venereal disease, and for operations of election.

2. Employees will be admitted to such hospitals upon request made by a physician in the employ of the Health Department, or the official head of the department or division in which they are employed.

3. In sending sick employees to local physicians for treatment, request must always be properly filled in, so as to give the physician the necessary information in case he wishes to send the employee to hospital. The necessities of patients will be given first consideration, and no one in urgent need of hospital care will be refused admission.

4. Officials who issue forms for admission to hospitals will see that they bear not only the brass check number, but the name of the employee as it appears on the pay roll. Special care should be used in case of foreign names, as much difficulty is experienced in identifying employees (on account of incorrect names being given) who have been sick, or who have died in hospitals.

5. Employees living with their families in Government quarters who, in the opinion of the visiting physician, cannot safely or conveniently report at the dispensary for treatment shall, if they so desire, be treated at their homes without charge, except when, in the opinion of the district physician, convalescence may be unduly prolonged.

FAMILIES AND SERVANTS OF EMPLOYEES.

6. The family of an employee shall be understood to include those persons who are members of his immediate household, and dependent upon him. A male over 21 years of age will not be considered a dependent member of an employee's family.

7. The members of families of employees may consult any of the physicians of the Health Department at any of the hospitals or dispensaries, free of charge.

EMPLOYEES OF CONTRACTORS UNDER THE PANAMA CANAL.

8. Unless otherwise provided in the contract employees of any corporation or firm having a contract for work to be performed on the Isthmus under The Panama Canal, receiving more than \$100 gold per month, and members of families of such employees, shall be treated as pay patients. Those receiving \$100 gold per month or less shall be treated as employees of The Panama Canal, and their families shall be treated as families of employees of The Panama Canal.

INDIGENT SICK, INSANE, AND LEPERS OF THE CANAL ZONE.

9. The indigent sick, insane persons, or lepers of the Canal Zone shall be admitted to such hospital as may be designated for their reception, bills being rendered

against The Panama Canal by the Chief Health Officer.

ARMY, NAVY, AND MARINE CORPS.

10. Officers and enlisted men of the United States Army, Navy, and Marine Corps, stationed for duty in the Canal Zone, or cruising in waters adjacent thereto, who are not on the pay rolls of The Panama Canal or the Panama Railroad Company, and members of their families and their servants, may be admitted to The Panama Canal hospitals at the same rates provided for families of employees.

11. Civilian employees of the above services, and their families, may be admitted to hospitals of The Panama Canal under the same circumstances as for officers and enlisted men.

OTHER EMPLOYEES OF THE UNITED STATES.

12. Other employees of the United States, their families and servants, may be admitted to the hospitals of The Panama Canal on the same basis as families of employees.

AMERICAN SEAMEN.

13. American seamen may be admitted to The Panama Canal hospitals upon the request of a representative of the Public Health Service.

PERSONS WITH CONTAGIOUS OR INFECTIOUS DISEASES.

14. Persons having, or suspected of having, contagious or infectious diseases, who are sent to hospital for the protection of the public, shall receive treatment without charge.

PATIENTS OF THE REPUBLIC OF PANAMA.

15. The indigent sick, insane, and lepers of the Republic of Panama, shall be admitted to such hospitals as may be designated for their reception, upon the request of a duly authorized official of the Republic, bills to be rendered against the Republic of Panama.

PRIVATE PAY PATIENTS.

16. Private pay patients shall include all persons treated by physicians of the Health Department, or admitted to the hospitals of The Panama Canal, not otherwise described above. They may be treated by physicians of The Panama Canal, or admitted to hospitals of The Panama Canal as far as the facilities may permit, without interfering with the treatment of employees.

CHARGES FOR TREATMENT.

17. Charges for treatment of all the above classes are shown in the attached table:

	Ordinary care and treatment—Wards—Per day.	Care of alcoholism and venereal diseases—Wards—Per day.	Private rooms—Per day.	Special nurse—Each—Per day.	Special maid or attendant—Each—Per day.	Obstetrical cases—Hospital.	Obstetrical cases—Outside hospital.	Surgical operations—Elective.	Surgical operations—Others.	Office consultation—Hospital or dispensary.	Home visit—First—If unable to go to dispensary.	Home visit—Alter first.	Home visit—To married employee when approved.
Employees of The Panama Canal and the Panama Railroad Company:

(1) Five per cent of approved schedule of operative charges.

(2) Ten per cent of approved schedule of operative charges.

(3) Twenty per cent of approved schedule of operative charges.

(4) As per approved schedule.

(5) Same as families of employees of The Panama Canal and the Panama Railroad Company.

(6) According to class.

(7) Those at Colon Hospital, per capita cost preceding month.

18. Children five years of age and under shall be charged at the rate fixed for male adults of the class to which they belong.

EXCEPTIONS TO RULES.

19. In case of an emergency, and where humanity or the public good requires it, a physician may depart from these regulations, but in each such case a written report shall be made immediately to the Chief Health Officer. Similarly, the superintendent of Ancon Hospital may make such reductions from the minimum charges for operations as may be necessary on account of lack of means of the patient, or omit them entirely in case of destitution. A written report of all such cases shall be made immediately to the Chief Health Officer, and a copy forwarded to the Auditor of The Panama Canal.

GEO. W. GOETHALS,

Governor.

Discontinuance of Breakage Allowance on China and Glassware.

THE PANAMA CANAL,

OFFICE OF THE GOVERNOR,

CULEBRA, C. Z., May 29, 1914.

Sir: You are informed that the breakage allowance on china and glassware will be discontinued effective June 1, 1914.

GEO. W. GOETHALS,

Governor.

Panama Railroad Docks and Piers—Design and Construction.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., June 3, 1914.

CIRCULAR No. 660-14:

Effective this date, all work connected with the design and construction of Panama railroad piers Nos. 7, 8, 9 and 10 at Cristobal, and all Panama railroad dock and pier construction that may be hereafter authorized will be performed by the forces of the Panama railroad under Mr. T. B. Monniche, engineer of docks, who as such, will report directly to Mr. H. H. Rousseau, Engineer of Terminal Construction.

All work connected with the maintenance and repair of piers and docks of the Panama railroad will remain as at present under the superintendent of the Panama railroad.

GEO. W. GOETHALS,

Governor, The Panama Canal.

President, The Panama Railroad Company.

Copies of Form C. E. 160-1 to be Destroyed.

THE PANAMA CANAL,

OFFICE OF THE GOVERNOR,

CULEBRA, C. Z., May 29, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

Please destroy all copies of form C. E. 160-1, "Application for increase of force or pay." Forms P. C. 471 and P. C. 472 are now available, and should be used whenever application is made to change the status of an employee.

GEO. W. GOETHALS,

Governor.

Superintendent, Panama Railroad.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., June 1, 1914.

CIRCULAR No. 661-9:

Effective June 1, 1914, Mr. Charles H. Motsett is appointed superintendent of the Panama railroad, vice Lieut. Frederick Mears, resigned.

GEO. W. GOETHALS,

President.

Aids to Navigation.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., May 27, 1914.

CIRCULAR No. 643-1:

REGULATIONS GOVERNING VESSELS APPROACHING THE PONTOON BRIDGE AT PARAISO.

1. Large vessels, as far as practicable, will give advance notice of the probable time of arrival at the pontoon bridge.

2. Seagoing vessels steaming through Culebra Cut toward Pedro Miguel shall invariably have the right-of-way, and the pontoon bridge be opened upon their approach.

(NOTE.—This is necessary, as it would be extremely awkward to keep control of a large vessel in the narrow channel if much time were taken or delay caused by not opening the bridge promptly.)

3. Seagoing vessels, when in Pedro Miguel Lock, shall not leave the lock until after communicating with Paraiso, and arranging for an open draw.

4. Vessels, as far as practicable, will attempt to regulate their speed so as not to pass Paraiso at regular rain time.

5. Signals from a steamer requesting that the draw

be opened will be one prolonged blast of 10 seconds' duration.

6. Canal craft and small vessels will also give notification, when practicable, but if they approach immediately before train time, will slow down or stop until after the train has passed.

7. Large vessels will invariably slow down or stop when approaching the pontoon, and proceed at dead slow speed when passing.

8. The pontoon bridge will be lighted, as follows:

(a) A red light on each abutment on the northwest side and one on each abutment on the southeast side.

(b) The pontoon is provided with red and green lanterns, each showing a green light when the bridge is open, and a red light when the bridge is closed, placed at an elevation of 15 feet above the railroad track and close to the ends of the pontoon.

GEO. W. GOETHALS,
Governor.

Quarantine Rules and Regulations.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., May 1, 1914.

CIRCULAR No. 626:

The following additional quarantine rules and regulations of the Canal Zone and the cities of Colon and Panama, are published for the information and guidance of all concerned.

GEO. W. GOETHALS,
Governor.

FOREIGN.

SPECIAL REGULATIONS ON ACCOUNT OF CHOLERA—FOREIGN.

1. At ports where cholera prevails, special care should be taken to prevent the water and the food supply from being infected. The drinking water, unless of known purity, should be boiled, and the food thoroughly cooked and protected against contamination by flies, etc.

2. The latrines of vessels must be so arranged that they, including their discharge pipes, can be made and kept mechanically clean.

3. Unless unavoidable, vessels should not take water ballast from a source contaminated or suspected of contamination by cholera. When unavoidable, the facts will be noted on the bill of health.

4. Certain food products, viz., unsalted meats, sausages, dressed poultry, fresh butter, fresh milk (unsterilized), fresh cheese, coming from cholera-infected localities or through such localities, if exposed to infection therein, should not be shipped. Fresh fruits and vegetables from districts where cholera prevails, shall be shipped only under such sanitary supervision as will enable the inspector to certify that they have not been exposed to infection.

5. Steerage passengers and crew coming from cholera-infected districts should be detained five days in suitable houses or barracks located where there is no danger from infection, and all baggage inspected and, if necessary, disinfected.

6. Steerage passengers and crew, from districts not infected with cholera, shipping at a port infected with cholera, unless passed through without danger of infection and no communication allowed between such persons and the infected locality, and especially no food-stuffs allowed to be obtained from the infected locality, should be treated as those in the last paragraph.

7. Cabin passengers coming from cholera-infected districts embarking at a clean or an infected port should produce satisfactory evidence as to their exact place of abode during the five days immediately preceding embarkation. And if it appears that they or their baggage have been exposed to infection, the baggage should be disinfected, and the passengers detained under medical supervision a sufficient time to cover the period of incubation since last exposure.

8. Should cholera appear in the barracks or houses in which passengers are undergoing detention, no passenger from said houses or barracks who has presumably been exposed to this new infection, should embark until after the expiration of the period of incubation of the disease in question subsequent to the last exposure to infection and the application of all necessary sanitary measures.

SPECIAL REGULATIONS ON ACCOUNT OF YELLOW FEVER—FOREIGN.

9. At ports where yellow fever prevails, precautions should be taken to prevent the introduction of mosquitoes (*Stegomyia*) on board the vessel. Water tanks, water buckets, and other collections of water about the vessel should be guarded in such a manner that they shall not become breeding places for mosquitoes. The vessel should lie at an anchorage where it will be impossible for *Stegomyia* to gain access to it from the shore. If the vessel lies at an anchorage which, in the opinion of the inspecting officer, renders it liable to the access of mosquitoes, fumigation should be carried out to destroy the mosquitoes that may have come on board, so that

the quarantine of the personnel of the vessel could be counted from this date or that of sailing.

SPECIAL REGULATIONS ON ACCOUNT OF PLAGUE—FOREIGN.

10. At ports or places where plague prevails in men or rodents, every precaution should be taken to prevent rats, fleas, or other vermin from getting aboard. At such ports or places, the vessels should not lie at a dock or tie to the shore or anchor at any place where rats may gain access to the vessels. Lighters should not harbor rats, and the introduction of rats from them should be very carefully guarded against.

11. In case lines are led to the shore, they should be freshly tarred, and provided with inverted cones or such other devices as may prevent rats passing to the ship.

12. If the vessel docks, the lines should be treated as directed in the last paragraph; the vessel must be breasted off six feet from the wharf, and the gangplank kept raised at night, and all parts of the vessel fumigated, simultaneously, if possible, for the purpose of killing rats and other vermin, before sailing.

13. Vessels arriving at a foreign port in transit, having previously lain in a plague-infected port without taking proper precautions to prevent the ingress of rats and fleas, should be fumigated to kill such vermin, provided effective fumigation for killing such vermin has not already been done and that this fumigation can be done efficiently.

14. Articles which harbor or are liable to harbor rats or rat fleas, should not be shipped until freed of such vermin, either by the use of chemicals, fumigation, or solutions, or by preventing the access of rats for 15 days before shipment. The nature of the merchandise and the place and method of stowing prior to shipment must be considered in determining its liability to be a rat or vermin carrier, thus: Bundles of hides, bags of grain, etc., so stowed as to be used as nesting places for rats, would be flea, and might be rat, carriers.

15. Bags of grain (wheat, rice, barley, oats, corn, and bran) should not be received as cargo unless the same has been stored in ratproof warehouses, or has originated and has been stored in places where rats cannot gain access to it. When the cargo of a vessel consists of grain or other rat food, extra precautions should be taken to prevent rats from going aboard.

16. Hides and skins from plague-infected ports should not be received unless the same have been stored in ratproof warehouses for a period of 15 days prior to shipment, unless the same have been chemically cured, or unless the same have originated in clean districts and loaded directly on board the ship without the possibility of rats gaining access to them. Hides chemically cured, and single or loosely baled, are less liable to harbor rats or rat fleas, and might be received as cargo.

17. All baggage of passengers or crew shipped at plague-infected ports, shall be subject to inspection and, if necessary, disinfected to destroy vermin.

SPECIAL REGULATIONS ON ACCOUNT OF SMALLPOX—FOREIGN.

18. Steerage passengers and crew coming from districts where smallpox prevails in epidemic form, or who have been exposed to smallpox, should be vaccinated before embarkation, unless they show satisfactory evidence of having acquired immunity to smallpox by previous attack, or successful vaccination within one year, and their baggage inspected and, if necessary, disinfected.

SPECIAL REGULATIONS ON ACCOUNT OF TYPHUS FEVER—FOREIGN.

19. The baggage of steerage passengers and crew who embark at places where typhus fever prevails, should be disinfected to insure the destruction of vermin.

SPECIAL REGULATIONS ON ACCOUNT OF LEPROSY—FOREIGN.

20. No one who is suffering from leprosy should be allowed to embark unless specially authorized to do so and he is proceeding to his own country.

REQUIREMENTS AT SEA.

The following requirements at sea are largely advisory in character, but a true and careful compliance with them will tend to relieve largely the stringency of the quarantine measures at the port of arrival.

21. The master of a vessel should observe the following measures on board his vessel:

(a) The water closets, forecabin, bilges, and similar portions of the vessel liable to harbor infection should be disinfected and frequently cleaned.

(b) Free ventilation and rigorous cleanliness should be maintained in all portions of the ship during the voyage, and measures taken to destroy rats, mice, fleas, flies, mosquitoes, and all vermin.

(c) A patient sick of a communicable disease should be isolated, and one member of the crew detailed for his care and comfort, who, if practicable, should be immune to the disease.

(d) Communication between the patient or his nurse and other persons on board should be reduced to a minimum.

(e) Used clothing, body linen, and bedding of the

patient and nurse should be immersed at once in boiling water, or in a disinfecting solution.

(f) The compartment from which the patient was removed should be disinfected and thoroughly cleaned. Articles liable to convey infection should remain in the compartments during the disinfection when gaseous disinfection is used.

(g) Any person suffering from malaria or yellow fever should be kept under mosquito bars, and the apartment in which he is confined closely screened with mosquito netting. All mosquitoes on board should be destroyed by fumigation with sulphur. Mosquito larvae (wigglers and wiggle tails) should be destroyed in water barrels, casks, and other collections of water about the vessel by the use of petroleum (kerosene); where this is practicable, use mosquito netting to prevent the exit of mosquitoes from such breeding places.

(h) In the case of plague, special measures must be taken to destroy rats, mice, fleas, flies, and other vermin on board.

(i) In the case of typhus, special measures should be taken in addition to disinfection to destroy vermin.

(j) In the case of cholera, typhoid fever, or dysentery, the drinking water should be boiled and the food thoroughly cooked. The discharges from the patient should be immediately disinfected and thrown overboard.

22. An inspection of the vessel, including the steerage, should be made by the ship's physician once each day.

23. Should cholera, yellow fever, smallpox, typhus fever, plague, or any other communicable disease appear on board a ship while at sea, those who show symptoms of these diseases should be immediately isolated in a proper place; the ship's physician should then immediately notify the captain, who should note same in his log, and all of the effects liable to convey infection, which have been exposed to infection, should be destroyed or disinfected.

24. The hospital should be disinfected as soon as it becomes vacant.

25. The dead, except those dead of yellow fever, should be enveloped in a sheet saturated with one of the strong disinfecting solutions, without previous washing of the body, and at once buried at sea or placed in a coffin hermetically sealed.

26. A complete clinical record should be kept by the ship's surgeon of all cases of sickness on board, and the record delivered to the quarantine officer at the port of arrival.

27. The following disinfecting solutions are recommended for use at sea: Bichloride of mercury, 1-1000; carbolic acid, five per cent. It is suggested that a vessel should carry for every 100 passengers: Bichloride of mercury, five pounds; carbolic acid, 10 pounds; alcohol, 10 pounds; formalin, 10 pounds; 100 pounds sulphur; 50 pounds pyrethrum, and 12 Dutch ovens, about 12 inches in diameter.

QUARANTINE.

28. Vessels arriving under the following conditions shall be placed in quarantine:

(a) With a quarantinable disease on board, or having had such a disease on board during the voyage.

(b) Any vessel which the quarantine officer considers infected with quarantinable disease.

(c) Vessels arriving from infected ports in which the regulations prescribed to be observed in foreign ports have not been carried out.

(d) In the case of vessels arriving from infected ports without sickness on board, the personnel shall be detained under observation at quarantine to the period of incubation of the disease against which quarantine is directed.

29. Vessels entering the port for the purpose of passing through the Canal without discharge of cargo or disembarking passengers at the ports of Balboa and Cristobal, or the ports of Panama or Colon in the Republic of Panama, will be given free *pratique* to proceed without detention, provided the special regulations prescribed for observation in foreign ports have been carried out and no diseases of a quarantinable nature have occurred during the voyage.

30. Passengers or crews on vessels falling under the heading (29) who disembark at the ports of Balboa or Cristobal, or the ports of Panama or Colon in the Republic of Panama, will be held under observation in quarantine a sufficient number of days to complete the period of the incubation of the diseases against which quarantine is directed.

31. Vessels entering the ports for passing through the Canal that have had cases of quarantinable diseases on board during the voyage, will be allowed to proceed to the port of destination after the persons sick of the quarantinable disease have been removed and the necessary disinfection carried out. In such cases, the vessel should be passed through the Canal in quarantine.

32. In the case of vessels coming under Section 31, a statement of the nature of the disease removed at quarantine and the measures of disinfection carried out, shall be communicated to the health officer of the next port to which the vessel is going; a sealed letter at-

tached to the bill of health, and forming a part of the ship's papers, should be addressed to the health officer of the port of destination, and the *pratique* granted the vessel shall have a notation of the facts entered thereon.

GENERAL REQUIREMENTS AT QUARANTINE.

33. Pilots will be detained in quarantine a sufficient time to cover the period of incubation of the disease for which the vessel is quarantined if, in the opinion of the quarantine officer, such pilots have been exposed to infection. The dunnage of pilots shall be disinfected when necessary.

34. No direct communication shall be allowed between any vessel in quarantine and any other vessel or place outside, and no communication whatever with the vessel in quarantine shall be had by any person, except by permission and under the supervision of the quarantine officer.

35. After a vessel has been rendered free from infection, it may be furnished with a fresh crew and released from quarantine, while all or part of the personnel are detained. Under these circumstances, the quarantine officer must exercise the greatest care that the vessel shall not become reinfected, especially by contact with persons in quarantine, or infected objects.

36. The form of certificate which shall be issued to a vessel by the quarantine officer when he releases her from quarantine shall be prescribed by the Governor of The Panama Canal, and shall embody the statement that the vessel has in all respects complied with the quarantine regulations prescribed by the Canal Zone Government, and that, in the opinion of the quarantine officer, she will not convey quarantinable disease, and that said vessel is granted free *pratique* to enter her port of destination, the name of which shall be embodied in the blank.

37. The persons detained shall be inspected by the physician twice daily, and be under his constant surveillance, and no intercourse will be allowed between different groups while in quarantine.

38. Cleanliness of quarters and of person shall be enjoined and daily enforced. Disinfection shall be practiced where there is any possibility of infection.

39. Water closets, urinals, privies, or troughs, shall be provided.

40. In any group in which communicable disease appears, the sick will be immediately isolated in hospital, and the remaining persons in the group and their effects, appropriately treated, and then removed to other quarters, if possible, and the compartments disinfected.

41. No convalescent shall be discharged from quarantine until after a sufficient time has elapsed to insure his freedom from infection, and this is to be determined by bacteriological examination when necessary.

42. No other person shall be discharged from quarantine until the period of incubation of the disease has elapsed since the last exposure to infection.

43. The body of no person dead of a quarantinable disease other than yellow fever shall be allowed to pass through quarantine until one and a half years have elapsed since death. Such bodies must be transported in hermetically sealed coffins, the outside of which have been carefully disinfected.

In the case of the bodies of such persons as may have died of quarantinable diseases other than yellow fever on the voyage, or upon arrival at quarantine, cremation should be resorted to if practicable and consented to; if not, the body should be wrapped, without preliminary washing, in a sheet saturated with a solution of bichloride of mercury 1.500 and buried, surrounded by caustic lime.

44. The quarantine officer shall report to the Chief Health Officer and Governor of The Panama Canal all violations of the quarantine laws.

45. The quarantine officer shall report to the collector of customs any vessel which arrives without the bill of health hereinbefore prescribed.

46. All vessels requiring inspection under these regulations, must present to the collector of customs at the port of entry the quarantine certificate above prescribed.

SPECIAL REGULATIONS ON ACCOUNT OF CHOLERA.

47. For the purpose of these regulations, five days shall be considered as the period of incubation of cholera.

48. If the vessel carry persons from cholera-infected ports or places, a bacteriological examination should be made of any cases of cholera, to exclude cholera, and such persons shall be subjected to bacteriological examination, in order to determine whether any are bacillus carriers, or not, and *pratique* will not be granted until these measures have been carried out.

49. Persons determined to be bacillus carriers will be isolated and treated as cases of cholera, and the quarantine of persons that have been in contact with the same will date from the isolation of such carriers.

50. If cholera has appeared on board, remove all passengers from the vessel and all of the crew, save those necessary to care for her; place the sick in hos-

pital. Carefully isolate those especially suspected, and segregate the remainder in small groups. No communication should be held between these groups. Those believed to be especially capable of conveying infection must not enter the place of detention until they are bathed and furnished with noninfected clothing; nor shall any material capable of conveying infection be taken into the place of detention, especially food and water.

51. Water and food supply must be strictly guarded to prevent contamination, and issued to each group separately.

52. Food of a simple character, sufficient in quantity, thoroughly cooked, shall be issued to those detained in quarantine. No fruit or uncooked vegetables shall be permitted.

53. The greatest care must be exercised to prevent the spread of the infection through the agency of flies or other insects.

54. The *dejecta* from all persons in quarantine on account of cholera shall be disinfected before final disposition.

55. The water supply of the vessel, if suspected of infection, must be disinfected or changed without delay, the casks or tanks disinfected, and, after thorough rinsing, refilled from a source of undoubted purity, or the water furnished must have been recently boiled.

56. The baggage or effects of passengers and crew that may have been exposed to infection must be disinfected.

57. Articles of cargo which have been exposed to infection and are liable to convey the same, must be disinfected.

58. Living apartments and their contents, and such other portions of the vessel as have been exposed to infection, must be disinfected.

59. Water ballast taken on at a cholera-infected port should be discharged at sea, or if discharged in fresh or brackish water, must previously be disinfected. Vessels arriving with water ballast presumably infected, must return to sea under guard, in order to discharge such ballast. If practicable, the tanks should be disinfected before being flushed and refilled with sea water.

SPECIAL REGULATIONS ON ACCOUNT OF YELLOW FEVER.

60. For the purpose of these regulations, six days shall be considered as the period of incubation of yellow fever.

61. A vessel aboard which a case of yellow fever has occurred at any time during the voyage shall be treated, as follows:

(a) Careful visual and thermometer inspection of all persons.

(b) The sick are to be immediately disembarked, protected by netting against the access of *stegomyia* mosquitoes, and transferred to a place of isolation.

(c) If the history of the case of sickness shows, in the opinion of the quarantine officer, that the infection was acquired on board from an infected ship, the personnel on such a ship should be disembarked, if possible and subjected to an observation of six days, dating from the day of last possible exposure.

(d) If the history of the case of sickness shows, in the opinion of the quarantine officer, that the infection was contracted on shore before embarkation, and a period of 10 days has not elapsed since the development of the case of yellow fever, the personnel of such a vessel need not be detained after the completion of the fumigation of the vessel.

(e) Persons under observation, presenting an elevation of temperature above 37.6° C., shall be isolated in a screened apartment.

(f) The ship shall be moored at least 200 meters from the inhabited shore.

(g) The ship shall be fumigated for the destruction of mosquitoes before the discharge of cargo, if possible.

62. A vessel which has lain in such proximity to the shore of a port infected, or suspected, as to render it liable to the access of *stegomyia* mosquitoes, is to be subjected to the measures which are indicated in (a), (c), and (g) of the preceding section.

63. All persons who can prove their immunity to yellow fever, to the satisfaction of the quarantine authorities, or who have not been exposed to possible infection of yellow fever, may be permitted to land at once.

64. For the destruction of mosquitoes, there shall be a complete and simultaneous fumigation of all parts of the vessel by sulphur dioxide gas, two per cent volume gas, two hours' exposure. Where sulphur is liable to injure articles, pyrethrum powder, camphor-phenol, or other approved culicides may be used instead.

SPECIAL REGULATIONS ON ACCOUNT OF PLAGUE.

65. For the purpose of these regulations, seven days shall be considered as the period of incubation of plague.

66. Ships aboard which plague has occurred in men or rats are to be subjected to the following treatment:

(a) Careful inspection.

(b) The sick, if any, are to be immediately disembarked and isolated.

(c) The destruction of rats on shipboard shall be effected as soon as practicable. Cargo must be partially or completely removed, if necessary, for effective destruction of rats. Proper precautions shall be taken to prevent rats getting ashore.

(d) All personnel to be held under observation not less than five days, which period may be extended to seven days.

(e) Soiled linen, personal effects in use, the belongings of crew and passengers, which, in the opinion of the quarantine officer, are considered as infected, shall be disinfected, and rendered free from vermin.

(f) In all cases, the quarantine officer shall assure himself that the vessel is free from rats and vermin before granting free *pratique*.

67. Vessels from ports infected with plague, in men or rats, which have docked or which have not taken precautions necessary to prevent the ingress of rats or vermin, and on which effective measures have not been taken to destroy same under the supervision of an accredited medical officer of the United States, shall, upon arrival be treated, as follows:

(a) Careful inspection.

(b) Fumigation for the destruction of rats.

(c) The personnel of such vessels may be subjected to observation for a sufficient length of time to cover the period of incubation of plague.

68. Treatment of vessels without cargo, for plague, shall be simultaneous fumigation with sulphur dioxide, not less than two per cent gas, for six hours' exposure.

69. Treatment of vessels with cargo shall be the fumigation with sulphur dioxide, four per cent gas, six to 12 hours' exposure, according to the stowing.

70. Infected vessels may require partial or complete discharge of cargo and fractional fumigation for efficient deratization.

SPECIAL REGULATIONS ON ACCOUNT OF SMALLPOX.

71. For the purpose of these regulations, 14 days shall be considered as the period of incubation of smallpox.

72. On all vessels arriving with smallpox on board, or having had smallpox on board during the voyage, any of the personnel who have been exposed to the infection of the disease must be vaccinated or detained in quarantine not less than 14 days since last exposure, unless they show satisfactory evidence of successful vaccination within one year, or of having had smallpox.

73. Vessels arriving with smallpox on board which has been properly isolated and other sufficient precautions taken to prevent the spread of the disease, need not be quarantined further than the removal of the sick, the disinfection of all compartments, baggage, and objects that have been exposed to the liability of infection, and such vaccination of the personnel as required in the preceding paragraph.

74. On vessels arriving with smallpox on board, and where the proper isolation and other precautions have not been taken, all those whom the quarantine officer believes to have been exposed to the infection will be detained, unless they have had smallpox, or unless they show satisfactory signs of having been properly vaccinated within one year.

75. Living compartments and their contents, or any other parts of the vessel exposed to the infection, must be disinfected.

76. The baggage and effects of passengers and crew that have been exposed to the infection, must be disinfected.

SPECIAL REGULATIONS ON ACCOUNT OF TYPHUS FEVER.

77. For the purpose of these regulations, 12 days shall be considered as the period of incubation of typhus fever.

78. Vessels in otherwise good sanitary condition, but having typhus fever on board which has been properly isolated, need not be quarantined further than the removal of the sick, and the compartments and their contents exposed to the infection, disinfected, and the destruction of vermin assured.

79. If the case has not been isolated, or the disease has spread on board from person to person, the vessel will be quarantined, the sick removed, and those who have been exposed to the infection detained under observation.

80. Vessels in bad sanitary condition on which the disease has appeared will be quarantined until thoroughly cleansed and disinfected and the destruction of vermin assured throughout; the sick will be cared for at isolated hospitals, and those exposed to the infection detained under observation.

81. The baggage and effects of passengers and crew, that have been exposed to the infection, must be disinfected, and the destruction of vermin assured.

82. Living compartments and their contents, or any other parts of the vessel exposed to the infection, must be disinfected and the destruction of vermin assured.

SPECIAL REGULATIONS ON ACCOUNT OF LEPROSY.

83. Vessels arriving at quarantine with leprosy on board shall not be granted *pratique* until the leper and

his baggage have been removed from the vessel to the quarantine station.

84. No alien leper shall be landed.

85. If the leper is an alien and a member of the crew and the vessel is from a foreign port, said leper shall be detained at the quarantine at the vessel's expense until taken aboard by the same vessel when outward bound. Such case of leprosy should be promptly reported to the collector of customs at the port of arrival of the vessel, and the collector shall exact a bond from the vessel for the resumption of the said alien leper upon the departure of the vessel.

SPECIAL REGULATIONS RELATING TO NAVAL VESSELS

86. Vessels of the United States Navy may be granted the hereinafter stated exemptions from quarantine regulations, but are subject to quarantine inspection upon arrival at a port of the Canal Zone, or the ports of Colon and Panama in the Republic of Panama.

87. The certificates of the medical officers of the United States Navy as to the sanitary history and condition of the vessel and its personnel, may be accepted for naval vessels by the quarantine officer boarding the vessel, in lieu of an actual inspection.

88. Vessels of the United States Navy having entered the harbors of infected ports, but having held no communication which is liable to convey infection, may be exempted from the disinfection and detention imposed on merchant vessels from such ports.

DISINFECTANTS AUTHORIZED BY THE UNITED STATES QUARANTINE REGULATIONS, AND THE PROPER METHODS OF GENERATING AND USING THE SAME.

PHYSICAL DISINFECTANTS.

89. *Burning*—Of unquestioned efficiency, but seldom required.

90. *Boiling*—Very efficient and of wide range of applicability. The articles must be wholly immersed for not less than 10 minutes in water actually boiling (100° C.). The addition of one per cent of carbonate of soda renders the process applicable to polished steel cutting instruments or tools.

91. *Steam*: (a) *Flowing steam* (not under pressure)—Flowing steam (not under pressure), when applied under suitable conditions is an efficient disinfecting agent. The exposure must be continued 30 minutes after the temperature has reached 100° C.

(b) *Steam under pressure without vacuum*—Steam under pressure will sterilize, provided that the process is continued 20 minutes after the pressure reaches 15 pounds per square inch. The air must be expelled from the apparatus at the beginning of the process. If impracticable to obtain the designated pressure, a longer exposure will accomplish the same result.

(c) *Steam under pressure with vacuum*—Steam in a special apparatus with vacuum attachment is the best method of applying steam under pressure, the object of the vacuum apparatus being to expel the air and to promote the penetration of the steam. The process is to be continued for 20 minutes after the pressure reaches 10 pounds to the square inch.

SULPHUR DIOXIDE.

92. Sulphur dioxide is efficient, but requires the presence of moisture. It is only a surface disinfectant, and is lacking in penetrating properties. An atmosphere containing 4.5 per cent can be obtained by burning five pounds of sulphur per 1,000 cubic feet of space. This amount would require the evaporation or volatilization of about one pint of water. Under these conditions, the time of exposure should be not less than 24 hours for bacterial infections. A shorter time will suffice for fumigation necessary to kill mosquitoes and other vermin.

93. The sulphur may be burned in shallow iron ovens (Dutch ovens), containing not more than 30 pounds of sulphur for each pot, and the pots should stand in vessels of water. Quicker and better results can be obtained from burning the same total amount of sulphur in a number of small shallow ovens (Dutch ovens), five to 10 pounds in each, than in a few large ovens. The sulphur ovens should be elevated from the bottom of the compartment to be disinfected, in order to obtain the maximum possible percentage of combustion of sulphur. The sulphur should be in a state of fine division, and ignition is best accomplished by alcohol; special care to be taken with this method to prevent damage to cargo of vessel by fire; or the sulphur may be burned in a special furnace, the sulphur dioxide being distributed by a power fan. This method is peculiarly applicable to cargo vessels.

94. Liquefied sulphur dioxide may be used for disinfection in place of sulphur dioxide generated as above, it being borne in mind that this process will require two pounds of the liquefied gas for each pound of sulphur as indicated in the above paragraphs.

95. Sulphur dioxide is especially applicable to the holds of vessels or to freight cars and apartments that may be tightly closed, and which do not contain objects injured by the gas. Sulphur dioxide bleaches fabrics or materials dyed with vegetable or aniline dyes. It destroys linen or cotton by rotting the fiber through

the agency of the acids formed. It injures most metals. It is promptly destructive to all forms of animal life. This property renders it a valuable agent for the extermination of rats, insects, and other vermin.

FORMALDEHYDE GAS.

96. Formaldehyde gas is effective if applied by one of the methods given below. Formaldehyde gas has the advantage as a disinfectant that it does not injure fabrics or most colors. It is not poisonous to the higher forms of animal life. It fails to kill vermin, such as rats, mice, roaches, bedbugs, etc. The method is not applicable to the holds of large vessels. Formaldehyde is applicable to the disinfection of rooms, clothing, and fabrics, but should not be depended upon for bedding, upholstered furniture, and the like, when deep penetration is required.*

97. Many formaldehyde solutions do not contain 40 per cent of formaldehyde, and all are apt to deteriorate with time. It is, therefore, necessary to use a quantity in excess of the amount prescribed in these regulations, unless the solution has been recently analyzed.

98. The following methods of evolving the gas may be used:

(a) Autoclave under pressure, three to 12 hours' exposure.

(b) Lamp generator, six to 18 hours' exposure.

(c) Spraying, 12 to 24 hours' exposure.

(d) Formaldehyde and dry heat in partial vacuum, one hour's exposure.

(e) Chemical, as formalin-permanganate method of Russel, (see Paragraph 104); formalin-aluminum sulphate-lime of Walker, (see Paragraph 104).

99. The minimum number of hours' exposure as given above applies to empty rooms of tight construction, containing smooth, hard surfaces; the minimum number of hours' exposure applying in all cases to textiles and other articles of a similar kind, requiring more or less penetration.

100. *Autoclave under pressure*—This method has considerable penetrating power when applied as detailed below. Rooms or apartments need no special preparation beyond the ordinary closing of doors and windows. Pasting, caulking, or chinking of ordinary cracks and crevices is not necessary. The doors of lockers and closets and the drawers of bureaus should be opened. In this apparatus, use formalin (40 per cent), with the addition of a neutral salt, such as calcium chloride (20 per cent.) The gas must be evolved under a pressure not less than 45 pounds. After the gas is separated from its watery solution, the pressure may be allowed to fall and steam projected into the compartment to supply the necessary moisture. Use not less than 10 ounces of formalin per 1,000 cubic feet, and keep the room closed for three to 12 hours after the completion of the process. For large rooms, the gas must be introduced at several points as far apart as possible. It is applicable to the disinfection of clothing and fabrics suspended loosely in such a manner that every article is freely accessible to the gas from all directions.

101. *Lamp or generator*—This method requires an apparatus producing formaldehyde by a partial oxidation of wood alcohol, and in using it the room or apartment should be rendered as tight as practicable. Oxidize 24 ounces of wood alcohol per 1,000 cubic feet, and keep the room closed for six to 18 hours, in accordance with the provisions of Paragraph 93. This method leaves little or no odor. When applied to clothing and textiles, the articles should be suspended in a tight room and so disposed as to permit free access of the gas. (See also Paragraph 100.) The wood alcohol should be of 95 per cent strength, and should not contain more than five per cent of acetone.

102. *Spraying*—The formalin (40 per cent) should be sprayed on sheets suspended in the room in such a manner that the solution remains in small drops on the sheet. Spray not less than 10 ounces of formalin (40 per cent) for each 1,000 cubic feet. Used in this way, a sheet will hold about five ounces without dripping or the drops running together. The room must be very tightly sealed in disinfecting with this process, and kept closed not less than 12 hours. The method is limited to rooms or apartments not exceeding 2,000 cubic feet. The formalin may also be sprayed upon the walls, floors, and objects in the rooms. This method is markedly interfered with by, and is not to be relied on, at low temperature, say, below 72° F. At 45.5° F., very little formaldehyde is liberated, the formaldehyde polymerized on the sheets.

103. *Formaldehyde with dry heat in partial vacuum*—This method has superior penetrating powers and is especially applicable to clothing and baggage. The requirements of this method are (1) dry heat at 60° C. sustained for one hour; (2) a vacuum of 15 inches; (3) formaldehyde evolved from a mixture of formalin with a neutral salt, in an autoclave under pressure, using not less than 30 ounces of formalin (40 per cent) for

* It should be noted that formaldehyde disinfection is more efficient in warm, moist, or still weather than in cold, dry, or windy weather.

1,000 cubic feet; and (4) a total exposure, under these combined conditions, of one hour.

104. *Chemical, as (a) Formalin permanganate method*—When formalin is poured over crystals of permanganate of potash, a vigorous reaction takes place, and a large quantity of formaldehyde gas is liberated. Reaction is over in a short time—five minutes—and if a proper proportion of substances is used, the residue is almost dry. The proportion is two pints of formalin to one pound of permanganate of potash. One pint of formalin for 1,000 cubic feet of space, should be used if the temperature is 60° F. or less; a less amount may be used for higher temperature, but not less than 10 ounces per 1,000 cubic feet. This method is extremely efficient on account of the rapidity with which the gas is liberated, but the danger of fire should be guarded against, as the formaldehyde gas, being in a comparatively dry state, is inflammable in the presence of a light, such as lighted matches, lamps, etc.

(b) *Formalin-aluminum-lime method*—Add one part sulphate of aluminum to two parts of hot water. One part of this solution is added to two parts of formalin (both by volume). One part of this second solution is poured on two parts of unslacked lime (quick lime), broken into small particles. The process of liberation of formaldehyde gas is completed in about 20 minutes. This method is not as efficient as the previous one, as less than half the amount of formaldehyde gas is yielded from the same amount of formalin. Two pints of formalin for 1,000 cubic feet of space should be used, if the temperature is 60° F., or less. Fire should be guarded against, but this danger is decidedly less than in the permanganate process, on account of the large amount of water vapor coming off with the gas.

105. The stated times of exposure to sulphur dioxide and formaldehyde are sufficient to destroy bacterial infection due to nonspore-bearing organisms, providing that the infection is present on the surface. If the room is of peculiar construction, so as to impede the diffusion of the gas, or if the room is a dirty one, or if on account of any other condition rendering the germicidal action of the gas more difficult, the time of exposure should be proportionately increased, or supplanted by other methods.

CHEMICAL SOLUTIONS.

106. *Bichloride of mercury*—Bichloride of mercury is a disinfectant of undoubted potency and wide range of applicability. It cannot be depended upon to penetrate substances in the presence of albuminous matter. It should be used in solutions of one to 1,000. The solubility of bichloride of mercury may be increased by using sea water for the solution, or by adding two parts per 1,000 of sodium or ammonium chloride to the water employed.

107. *Carbolic acid*—Carbolic acid, in the strength of five per cent, may be substituted for the bichloride of mercury, and should be employed in the disinfection of the cabins and living apartments of ships, to obviate injurious action on polished metals, bright work, etc.

108. *Formalin*—Formalin containing 40 per cent of formaldehyde may be used in a five per cent solution as a substitute for bichloride of mercury or carbolic acid, and is useful for the disinfection of surfaces, defects, fabrics, and a great variety of objects, owing to its non-injurious character.

APPLICATION OF DISINFECTANTS IN QUARANTINE WORK.

109. Holds of iron vessels, empty, shall be disinfected by:

(a) Sulphur dioxide generated by burning sulphur, five pounds per 1,000 cubic feet of air space, or liberated from 10 pounds of liquid sulphur dioxide, sufficient moisture being present in both cases; time of exposure, 24 hours. (See Paragraph 92.)

(b) Washing with a solution of bichloride of mercury, one to 1,000.

110. Holds of wooden vessels, empty, shall be disinfected by:

(a) Sulphur dioxide in the manner prescribed above, followed by—

(b) Washing with a solution of bichloride of mercury.

111. Holds of cargo vessels, when cargo cannot be removed, shall be disinfected in so far as possible by sulphur dioxide, not less than four per cent per volume strength, and where possible this should be generated from a furnace to minimize danger of fire in cargo.

112. Living apartments, cabins, and forecloses of vessels shall be disinfected by one or more of the following methods:

(a) Sulphur dioxide, the destructive action of the gas on property being borne in mind.

(b) Formaldehyde gas.

(c) Washing with solution of bichloride of mercury, 1:1,000, or five per cent solution of formalin, or five per cent solution of carbolic acid, preference being given to carbolic acid for application to polished woods, bright metals, and other objects injured by metallic salts.

(d) The forecabin, steerage, and other living apartments in bad sanitary condition must be disinfected by method (a) followed by method (c).

113. Mattresses, pillows, and heavy fabrics are to be disinfected by—

- (a) Boiling.
- (b) Flowing steam, i. e., steam not under pressure.
- (c) Steam under pressure.
- (d) Steam in a special apparatus with vacuum attachment.

(e) Clothing, fabrics, textiles, curtains, hangings, etc. may be treated by either of the above methods from (a) to (d) inclusive, as circumstances may demand, or by formaldehyde gas or sulphur dioxide where the article is of a character which will not be damaged by sulphur dioxide.

114. Articles that may be injured by steam, such as leather, furs, skins, rubber, trunks, valises, hats and caps, bound books, silks, and fine woolsens should not be disinfected by steam. Such articles should be disinfected by formaldehyde gas or by any of the agents allowed in these regulations which may be applicable thereto. Those which will be injured by wetting should be disinfected by a gaseous agent.

115. Clothing, textiles, and baggage, clean and in good condition, but suspected of infection, can be efficiently and least injuriously disinfected by formaldehyde gas, generated by one of the methods prescribed in Paragraph 98—(a), (b), or (d).

116. Textiles which are soiled with the discharges of the sick or presumably are deeply infected, must be disinfected by—

- (a) Boiling.
- (b) Steam.
- (c) Immersion in one of the germicidal solutions.
- (d) Cooking and eating utensils are always to be disinfected by immersion in boiling water or by steam.

AGENTS FOR THE DESTRUCTION OF MOSQUITOES, RATS, AND OTHER VERMIN, AND THEIR APPLICATION TO QUARANTINE WORK.

117. Sulphur dioxide (obtained as described in Paragraphs 92 to 95) destroys all animal life.

118. In the case of vessels, when treated for yellow fever infection, the process shall be a simultaneous fumigation with sulphur dioxide, two per cent volume gas, and two hours' exposure, in order to insure the destruction of mosquitoes.

119. In the case of vessels when treated for plague, the process with sulphur dioxide shall be, as follows:

(a) *Without cargo*—The simultaneous fumigation with sulphur dioxide gas, not less than two per cent, for six hours' exposure.

(b) *With cargo*—Fumigation with sulphur dioxide gas, four per cent, six to 12 hours' exposure, according to stowing.

(c) Infected vessels may require partial or complete discharge of cargo, and fractional fumigation for efficient deratization.

120. *Pyrethrum*—The fumes of burning pyrethrum may be used to destroy mosquitoes in places where there are articles liable to be injured by the use of sulphur. Four pounds per 1,000 cubic feet space for two hours' exposure; with this amount, all or practically all of the mosquitoes will be killed, but precautions should be taken to sweep up and destroy any that may have escaped. *Pyrethrum stains walls, paper, etc.*

121. (a) The oxides of carbon, as used at Hamburg, are efficient to destroy rats, but do not kill fleas or other insects. They are obtained by burning carbon, coke, or charcoal, in special apparatus, and the gas as produced consists of about five per cent carbon monoxide, 18 per cent carbon dioxide, and 77 per cent nitrogen.

(b) Twenty kilos of carbon, coke, or charcoal are used for every 1,000 meters of space. The gas is allowed to remain in the ship for two hours, and from seven to eight hours are allowed for it to leave it. This is about equivalent to 1½ pounds of carbon (coke) to 1,000 cubic feet of air space. As this gas is very fatal to man and gives no warning of its presence, being odorless, a small amount of sulphur dioxide should be added to give warning of its presence.

(c) As it does not kill fleas, it cannot be depended on for complete work, where there is evidence of plague among rats on the vessel, as the infected fleas would infect the rats coming aboard after the deratization.

122. The articles named as disinfectants which can obviously destroy animal life can be used for that purpose when applicable, as steam for bedding, fabrics, etc. Formaldehyde is not applicable for this purpose.

123. Where both disinfection and destruction of vermin are required for mattresses, pillows, and fabrics, the use of steam meets both requirements, and is especially applicable.

124. (a) Hydrocyanic acid gas is fatal to all forms of animal life and is not injurious to any material. It is best generated by mixing:

Cyanide of potash..... 4
Sulphuric acid..... 6
Water..... 9

(b) The acid should first be diluted, which must be done in some vessel capable of withstanding the heat. The whole amount of the cyanide of potash must be

put in the acid at once, and as the evolution of the gas is very rapid, the operator must be prepared to leave immediately. Fulton advises that the cyanide be tied in a bag, to be lowered into the acid by a cord passing outside of the room.

(c) About 10 ounces of cyanide of potash per 1,000 cubic feet.

(d) It is, of course, applicable when necessary to destroy mosquitoes or vermin (particularly in living quarters), but is too dangerous to be used except by those experienced in its use, and then under most rigid precautions. Though destructive to animal life, hydrocyanic acid gas is but of slight value as a germicide.

Ancon Quarry.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., May 23, 1914.

CIRCULAR No. 660-12:

Effective June 1, 1914, the operation of the Ancon quarry will be transferred to the Division of Terminal Construction.

Geo. W. GOETHALS,
Governor.

Accountable Officials, P. R. R.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., May 25, 1914.

CIRCULAR No. 59:

All concerned—Effective at once, the following are designated accountable officials for property of the Panama railroad:

Mr. F. R. Blunt, trainmaster.
Mr. M. B. Connolly, roadmaster.
Mr. J. D. Tysinger, superintendent of bridges and buildings.
Mr. W. H. Fenley, superintendent of telephones and signals.
Mr. R. W. Bergin, receiving and forwarding agent, Colon.
Mr. A. S. Jussen, receiving and forwarding agent, Balboa.
Mr. F. B. Clements, local auditor.
Mr. R. H. Wardlaw, local treasurer.

H. A. A. SMITH,
Auditor, Panama Canal.

Approved:

Geo. W. GOETHALS,
Governor.

Special Inspector, Supply Department.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., June 1, 1914.

CIRCULAR No. 131:

To all concerned—Maj. W. R. Grove, having reported for duty, will act as special inspector of the Supply Department.

R. E. WOOD,
Chief Quartermaster.

"Ancon" Sails Friday, June 12.

PANAMA RAILROAD COMPANY,
OFFICE OF SUPERINTENDENT,
COLON, R. P., June 8, 1914.

CIRCULAR No. 433:

All concerned—The sailing date of the steamship *Ancon* has been set for Friday, June 12, 1914, at 3 p. m., from pier No. 8, (old number, 17), Cristobal, C. Z.

C. H. MOTSETT,
Superintendent.

Delivery of Baggage at Panama Station.

PANAMA RAILROAD COMPANY,
OFFICE OF SUPERINTENDENT,
COLON, R. P., May 29, 1914.

CIRCULAR No. 432:

All concerned—For the information of all concerned the baggage room at Panama will be kept open from 7.30 p. m., until 11 p. m., in future on the evening before the date of sailing of Panama railroad ships. The transfer wagon will be kept at the station during these hours and will answer all calls. You are requested, therefore, to have your baggage delivered, if possible, for handling on train No. 4, leaving Panama at 7.30 a. m., thus avoiding any delay that might occur at Colon in having baggage checked to ships.

F. R. BLUNT,
Acting Superintendent.

Examinations by Board of Local Inspectors.

ANCON, C. Z., June 6, 1914.

The Board of Local Inspectors will conduct examinations at the Administration Building, Ancon, on Wednesday, June 17, 1914, beginning promptly at 2 p. m., for persons desiring the following classes of licenses: Pilots, masters, mates, marine engineers, chauffeurs, and navigators of motor boats. All applicants for license must procure from the office of the board, Ancon, forms of application and information respecting the filling out of the same, not later than the day previous to the examination. An addition, all persons desiring chauff-

feurs' licenses must provide themselves with automobiles with which to demonstrate their ability to properly operate the same.

NOTE.—The demonstration test for applicants for chauffeurs' licenses will be given on Tuesday, the day preceding the regular examination, at 2 p. m., at the Administration Building, Ancon; on Wednesday, the day of the regular examination, for out-of-town applicants, at 2 p. m., at the Administration Building, Ancon. No demonstration tests will be given at Cristobal, except by appointment.

By direction of the chairman of the board.

W. H. HYDE,
Clerk to the Board.

Misdirected Letters.

ANCON, C. Z., June 10, 1914.

The following insufficiently addressed letters originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured upon request of the addressees:

Anderson, Robert W.	Masquito, Mary
Christiansen, August	McDonald, Miss Cornelia
Davis, B.	Palmare, J. S.
Davis, Mrs. Captain R. H.	Pennock, J.
Dunning, James	Sanders, Robert M.
Glakley, Captain M.	Silvia, John
Howell, James E.	Tarman, E. H.
Huhlein, C. F.	Watson, H. J.
Kenny, Michael	Weymouth, E. J., Mrs.

Larrabee, Ralph

LETTERS UNCALLED FOR JUNE 3, 1914.

Barnes, T. W.	Hamilton, Gerald
Barnett, Charlie	Henry, Orville
Berkley, E.	Hodge, Mrs. C. G.
Bernard, Mrs. Geraldine	Hollar, Mrs. W. J.
Blackett, Miss Emma H.	Hopkins, Dan
Brown, Ellwood	Howard, R. C.
Burnside, G. A.	Johnson, J. H.

June 20.....	1.22	7.19	1.22	7.50	

75th meridian time.

HOTELS AND COMMISSARIES.

Change in Rates at Hotels Washington and Aspinwall—Price Changes.

Effective June 1 and continuing until December 31, 1914, the rates in effect at the Hotel Washington, Colon, have been cut in half.

Sale of Coupon Books at Ancon Commissary.

The sale of commissary and hotel books for cash at the new Ancon commissary has been authorized. At the present time, cash purchases of books by employees in Ancon can be made only at the office of the cashier of the Panama railroad at the railroad station in Panama, or at the Balboa commissary.

Identification Cards for Nonemployees.

Identification cards will be issued for the use of nonemployees who are granted the privilege of purchasing commissary and hotel coupon books for cash. These cards will be of a different color from those issued to employees.

Better Delivery Service.

An additional wagon was placed in service in connection with the Colon and Colon Beach commissary deliveries on Tuesday, June 2. This makes two wagons in this service.

Special Purchases by Employees.

The recommendation of the Chief Quartermaster that the depot commissary be permitted to act as broker or agent for employees who desire to place special orders for special articles not carried in regular stock at the commissaries, has been approved. These purchases will be made at a surcharge of 10 per cent over the regular price to cover clerical expense, exchange, etc. To this will be added the actual cost of freight at Canal rates from Colon to the actual point of destination.

Launch Service to Hotel Aspinwall.

Effective June 15, 1914, the launch *Louise* will make its trips between Balboa and the Hotel Aspinwall, Taboga, on Mondays, Thursdays, and Saturdays, instead of Tuesdays, Thursdays, and Saturdays. The *Louise* will leave from the dredge landing at Balboa at 9.50 a. m., as heretofore.

Rates and Rules for Hotel Aspinwall.

THE PANAMA CANAL,
OFFICE OF ASSISTANT CHIEF QUARTERMASTER,
CRISTOBAL, C. Z., June 6, 1914.

CIRCULAR No. 494-A:

The following rules and rates for the Hotel Aspinwall are published, effective June 11, 1914:

Rates for bed and board—Employee, \$2 per day; non-employee, \$2.50 per day; servants, and children under 12 years, \$1 per day.

The daily board and bed rate will be divided, as follows: Three meals at 50 cents each, and bed at 50 cents, for employees; three meals at 50 cents each, and bed at \$1, for nonemployees; three meals at 25 cents each, and bed at 25 cents, for servants and children under 12 years of age.

Persons at bed and board rates must pay for all meals, unless one day's meals, or more, are missed consecutively, in which case notice must be given to the clerk in advance, in order to secure credit.

When stay terminates in the morning, breakfast will be included in bill.

An extra charge of 25 cents per person will be made for meals served in rooms.

Nonemployees after staying 30 days will, for the rest of their stay, be given employees' rate.

Rates for meals—Breakfast, 50 cents; lunch, 75 cents; dinner, 75 cents.

Meal tickets will be purchased at the office before entering dining room, by all persons without rooms.

Charge on supply launch between Balboa and Taboga; one way—Employees, 25 cents; nonemployees, 50 cents; children under five years, free.

Open accounts will not be permitted.

Guests will be required to pay their bills upon leaving. Accounts of employees unpaid at time of leaving will be made up at the nonemployees' rate and sent to the Auditor, Panama Canal. Bills will be made up on the 7th, 14th, 21st, and last days of the month, and presented to all guests who have been at the hotel a week. All bills are due and payable on presentation. No variations from this rule will be made without authority from the Assistant Chief Quartermaster.

No employee of the hotel has authority to make any other rates or to modify any of the foregoing rules.

F. O. WHITLOCK,

Assistant Chief Quartermaster.

Orders for Cakes.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., June 6, 1914.

CIRCULAR No. 558:

Cakes will hereafter be baked to order, at prices given below. Orders must be received at this office at least three days before delivery is desired:

FRUIT CAKE.

1. 4½-lb., 4½ inches in diameter, each.....	\$1.00
2. 9-lb., nine inches in diameter, each.....	2.00
3. 22½-lb., 14½ inches in diameter, each.....	5.00
4. 4½-lb., 4½ inches in diameter, covered with almond paste, iced, and ornamented, each.....	1.25
5. 9-lb., nine inches in diameter, covered with almond paste, iced, and ornamented, each.....	2.50
6. 22½-lb., 14½ inches in diameter, covered with almond paste, iced, and ornamented, each.....	5.60

POUND CAKE.

7. Not less than four pounds each, per lb.....	.25
8. Not less than four pounds each, iced, and ornamented, per pound.....	.30

LAYER CAKE.

(Chocolate, white, yellow, or caramel.)

9. Iced, diameter nine inches, height, three inches, each.....	\$1.00
10. Iced, diameter 11 inches, height, four inches, each.....	2.00
11. Iced, diameter 15 inches, height, 4½ inches, each.....	3.00
12. Iced, diameter nine inches, height, three inches, ornamented, each.....	1.25
13. Iced, diameter 11 inches, height, four inches, ornamented, each.....	2.40
14. Iced, diameter 15 inches, height, 4½ inches, ornamented, each.....	5.60

Names, dates, etc., to be included in ornamentation. Estimates for larger cakes will be furnished on application.

BENJ. L. JACOBSON,

Approved: Depot Commissary.

F. O. WHITLOCK,

Assistant Chief Quartermaster.

Sales of Canned Goods.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., May 29, 1914.

CIRCULAR No. 123:

District quartermasters and commissary storekeepers: Gallon cans of fruit, tomatoes, 7-pound tins of jam, etc., heretofore sold only to hotels, may be sold to private individuals.

R. E. WOOD,

Chief Quartermaster.

Commissary Cold Storage.

The commissary stores are open during the following hours: From 8 a.m., to 12.30 p.m., and 3 to 6.30 p.m.

The gold departments of the Cristobal store will open at 2 p. m. on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open till 7 p. m.

Retail prices of cold storage provisions for the week beginning June 11, 1914:

Strawberries, per quart.....	15

* Indicates advance from preceding list.

† Indicates reduction from preceding list.

‡ Indicates 5 cents allowed for return of bottle.

§ Sold only from commissaries; no orders taken for delivery.

¶ Sold only from cold storage and not from commissaries.

Porterhouse roast includes any cut of hind quarter down to rump, and will not be cut if orders for steak will consume the supply.

Tenderloins on porterhouse will not be cut and sold separately.

Not less than 1/2 ham or 1/2 shoulder of fresh pork will be sold.

Daily cold storage orders will be filed and kept for at least one month.

Price Changes.

The following price changes of articles in stock at the commissaries are effective June 11, 1914.

ARTICLE.	PRICE CHANGE.

Lost—On Monday, June 8, between the Ancon post office and the Panama railroad station, an Elgin open face gold watch, with gold hands and the initials "S. W. C." engraved on the back. A reward is offered

for its return to the owner, Mr. Geo. W. Clawger, Corozal.

Supplies for the Canal.

The following steamers with supplies for The Panama Canal and the Panama Railroad Company arrived at the ports of Colon, Cristobal, and Balboa during the week ending May 30:

Colusa, May 24, from San Francisco, with 20,410 feet, board measure, redwood lumber, for Fortifications Division; 1,850,403 feet, board measure, fir lumber, for stock; 281 pieces untreated piling, for Division of Terminal Construction.

Prinz Eitel Friedrich, May 26, from New York, with 95 kegs bolts, for stock.

Carltago, May 27, from New Orleans, with 100 barrels ethyl alcohol, for medical storehouse; 540 pieces creosoted switch ties, for Panama Railroad Company; 10,264 feet, board measure, yellow pine, lumber, 2,994 feet board measure, oak lumber, 2,435 feet board measure, ash lumber, 65 pieces piling, untreated, for stock.

Metapan, May 27, from New York with five cases, 29 barrels lighting fixtures, for Fortifications Division; 25 crates, 41 pieces, three barrels, seven bundles, five cases chain fender material, 100 crates, 25 barrels, six cases insulators and pins, for Division of Erection; 7,176 pieces hollow tile, for permanent buildings.

Abangarez, May 28, from New Orleans, with 87 cases door and window frames, 40 boxes marble, for Division of Erection; nine boxes marble, for permanent buildings; 52,500 feet, board measure, yellow pine lumber, for Mechanical Division; 69 crates sinks, 165 boxes handles, 370 bags feed, for stock.

Oranian, May 28, from Liverpool, with 50 pieces, and two cases bucket links, for Dredging Division.

Medea, May 29, from Amsterdam, with 127 packages floating crane material, for Division of Terminal Construction.

Calamares, May 29, from New York, with seven barrels, 17 cases electrical material, for Mechanical Division; 250 pieces boiler tubes, for stock.

Panama, May 28, from New York, with 63 bars tool steel, 1,616 pieces steel plates, for Dredging Division; 217 pieces pipe, Division of Municipal Engineering; 34 crates tubes, 46 cases electrical material, for Mechanical Division; nine crates ventilators, 14 cases electrical material, for Fortifications Division; 6,000 bags C. W. cement, 110 boxes ranges, 90 crates steel shelving, 30 boxes glass shades, for permanent buildings; 16,000 bags Portland cement, 750 kegs nails, 97 barrels, 70 crates, six boxes, 25 pieces, two kegs, pipe-fittings, 45 rolls wire fencing, 50 barrels flour, 59 bales rubber hose, for stock; and a miscellaneous cargo, the whole consisting of 25,682 packages, weighing approximately 1,830 tons.

Ancon, May 30, from New York, with 15 boxes ventilating apparatus, 10 boxes sash operating apparatus, for Mechanical Division; 80 barrels lime, 800 barrels plaster, for permanent buildings; 134 pieces steel rail for Division of Terminal Construction; four towing locomotives, for Division of Erection; 25 cases water coolers, 110,278 bags Portland cement, for stock; and a miscellaneous cargo, the whole consisting of 111,831 packages, weighing approximately 5,885 tons.

Movement of Vessels at Port of Balboa.

The following vessels arrived at, or departed from, the port of Balboa during the week ending May 30:

Arrivals—May 25, *Isthmian*, from San Francisco; *Ucayali*, from Callao, Ecuador, to Guayaquil, Peru, (P. S. N.), from Callao; May 30, *Pléiades*, from San Francisco; June 1, *Mantaro*, from Callao.

Departures—June 25, *Pachitea*, to Callao, Aysen, to Valparaiso; June 28, *City of Para*, to San Francisco, May 29, *Rupanco*, to Guayaquil; June 1, *Peru* (P. M. S.), *Colusa*, to San Francisco; *Ucayali*, to Callao, Ecuador, to Guayaquil, Peru (P. S. N.), to Callao.

Sale of Combined Pool and Billiard Table.

THE PANAMA CANAL,

OFFICE OF THE DEPOT QUARTERMASTER,

MOUNT HOPE, C. Z., May 28, 1914.

Sealed bids will be received at the office of the Depot Quartermaster, Mount Hope, until 2 o'clock p. m., Saturday, June 13, 1914, when they will be opened in the presence of attending bidders, for one combined pool and billiard table complete, with one set billiard balls, one full set pool balls, fourteen (14) cues, one cue ridge, one cue rack, buttons, and chart.

The table may be seen on any working day at the Cristobal shop store (near the colored commissary building) between the hours of 7 and 11 a. m., and 1 and 5 p. m.

Bids must be plainly marked "Proposal to purchase combined pool and billiard table, to be opened June 13, 1914," and addressed to the Depot Quartermaster, Mount Hope, C. Z. The right is reserved to reject any or all bids.

C. H. MANN,
Depot Quartermaster.

MOVEMENTS OF OCEAN VESSELS.

The following is a list of sailings and scheduled arrivals of the Panama Railroad Steamship Line; of the Royal Mail Steam Packet Company; of the Hamburg-American Line, and of the United Fruit Company's Line:

*Will carry mail from the United States.

†Will carry mail to the United States.

‡Will carry mail for Alabama, Arkansas, Louisiana, Mississippi, and Texas.

Panama Railroad Company's steamers sail from Piers 8, 9, and 11, Cristobal, at 3 p. m.

Royal Mail steamers leave for New York on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct, leave on Thursdays at 3 p. m.; for New Orleans, viz Bocas del Toro and Havana, on Thursdays at 4 p. m.; ships for New York via Kingston, on Thursdays, at 2 p. m.; for New York direct, on Wednesdays at 2 p. m.; for Limon, on Saturdays at 4 p. m.; and for Port Limon direct, on Saturdays at 5 p. m.

The Hamburg-American steamers *Prinz Eitel Friedrich* and *Prinz Sigismund* sail from New York, via Kingston and Fortune Island, on Sundays at 2 p. m.; the *Prinz August Wilhelm* and *Prinz Joachim* sail for New York, via Kingston, Santiago de Cuba, and Fortune Island, on Tuesdays at 10 a. m.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,
THE CANAL RECORD,
Ancon, Canal Zone,
Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Division of Lighthouses Merged.

The Division of Lighthouses was transferred to the Division of Canal Transportation on June 16. The work remaining to be done on that date in connection with the lighting of the Canal was about, as follows: In addition to the beacon to be built at the outer end of the Toro Point breakwater, there are several more through the Canal and some of the buoys to be established. Owing to the constructive work, it has not been possible to complete these aids to navigation up to the present time, but they will be installed as rapidly as practicable. The districts for keeping the lights are three in number, as follows: The Atlantic section, including the lights from Gatun to Colon, with headquarters at Gatun; the Pacific section from Pedro Miguel to the sea, with headquarters at Balboa, and the Gatun Lake and Culebra Cut section, which, for the present, will be tended by the steam launch *Balboa*. Later, one of the French clippers in use by the Dredging Division will probably be converted into a lighthouse tender.

Closing Down of Empire Power Plant.

The electric light and power plant at Empire will be shut down about July 1, and thereafter, current for light and power will be supplied the towns on the west side of the Canal from the Miraflores steam plant. The Empire plant now supplies current for lights at Las Cascadas, Culebra, and Empire, and power for the operation of a few small motors at Empire and Culebra. In using current from the Miraflores plant, the existing overhead lines will probably be connected to the submarine cable which crosses the Canal at Cucaracha for the operation of the relay pumps on the west bank of the Cut in connection with the work of dredging. It will be necessary to change some of the transformers on account of the change in frequency from 60 to 25 cycles, but the transformers are

available, and the cost of the work will be small.

The air compressor plant at Empire will be continued in service for some time longer, in order to supply air to the Division of Erection for work at Pedro Miguel Lock, and to the municipal division for the operation of a small pump used in connection with the Gold Hill sluicing work. The Division of Erection estimates that they will have no further use for this service after September 15, and it is probable that the air compressor plant can be closed down soon after that date.

Increased Water Service at Exposition Grounds.

A 10-inch water main is being laid by the municipal engineering division from the Ancon service mains to connect with the present 8-inch main in Calidonia road, Panama, to increase the effectiveness of the pressure in outer Calidonia and the Panama exposition grounds. The work was begun on June 9, and one gold and about 50 silver men are engaged on it. The line is to lead from the base of the hill at the low service reservoir, on the north side of Ancon, across the former baseball park, under the Panama railroad, and across lots to the orphan asylum, fronting on the Sabanas road. It will be 4,400 feet long, and its estimated cost is about \$8,000. The Panama Canal is to pay for that part, slightly over 50 per cent, lying in the Canal Zone, and the Government of Panama will pay for the remainder. An auxiliary 10-inch line will be laid to a point near the present Ancon pumping station, to connect with the high service main. The high pressure is to be turned on when necessary for fire fighting, and check valves will be installed in the connections to prevent back pressure into the low service system.

Work of New Dipper Dredges.

The new dipper dredge *Paraíso*, excavating at the base of Cucaracha slide, is still in charge of a superintendent sent to the Isthmus by the Bucyrus Company, the contractor, to supervise the erection of the dredge's machinery and its initial operations. The superintendent is working the machinery slowly, to feel it out carefully under all combinations of strains. Before the expiration of the 30-day test period the dredge will be placed in charge of the Dredging Division and speeded up to normal performance.

Both the *Paraíso* and its twin, the *Gamboa*, are working in hard rock, excavating an outcropping dike of trap. This is an unusually hard, metallic rock, and a similar dike across the Pedro Miguel lock site caused considerable difficulty in excavation, by dulling drills and wearing out the teeth of steamshovels. The *Gamboa* and *Paraíso* are handling it with their 10-cubic yard dippers, provided with teeth of manganese steel. The 15-yard dippers can be used only in less exacting excavation. The *Gamboa*, which has been turned over to The Panama Canal and accepted, is

being worked to full capacity, and is getting out an average of about 6,000 cubic yards per day, in two 8-hour shifts.

Abandonment of New Gatun.

It has been decided that no licenses for stores in the village of New Gatun will be issued after June 30, 1914, and that licenses already issued for periods after June 30 be cancelled effective on that date. The merchants, however, will be permitted to carry on business without license from July 1 to August 31, in order that they may have an opportunity to close out their stocks. The land agent has been authorized to cancel all leases to lots in the village on August 1, and no rentals will be collected for periods after July 31. The owners of houses will be permitted to remain on the ground and occupy their houses until December 31, 1914, but after that date they will be required to move. Free transportation will be granted over the Panama railroad, together with their personal effects and building materials recovered from their houses.

Advance of Transisthmian Duct Line.

In the first two months of construction of the transisthmian duct line ending June 14, the line has been completed, with the exception of manhole covers, from Gamboa to a point over two miles south of Frijoles, which is more than 12 miles. Duct, unconsolidated has been laid about a mile further, and the trench has been dug about two miles further.

It is proposed to double the force on this work about July 1. A second construction division, made up like the present, of nine gold and approximately 425 silver employees, will begin work at the south end of the Gamboa bridge and advance toward Balboa.

Each division will be provided with its separate labor train, running out each morning from Colon or Panama. It is estimated that the field expenses of the two forces will aggregate about \$1,175 per day.

Progress on Fender Chain.

Three sections of fender chain, two of which were 158 feet long, and one of which was 110 feet long, all three making one complete chain, 426 feet in length, arrived on the Isthmus on June 10, on the steamship *Tenadores*. One chain is being installed between chain fender machines Nos. 824 and 825 at Pedro Miguel Lock, to protect the intermediate gate in the east chamber. With the delivery, three and two-thirds complete chains, out of the 24 required, have reached the Isthmus. Fifteen have been manufactured, most of them now being under test in the United States. The delivery of the chain operating machinery, built by the United Engineering and Foundry Company, has been completed.

The chain fenders are the last of the large items of the lock operating and protective devices to be installed. The delivery of the

chains, which are of unusual size and present many difficulties in manufacture, has been uncertain. Chains have been under order at three different American chain works simultaneously, and The Panama Canal is now inviting tenders from Europe for the remaining nine. The chains average from 418 to 434 feet in length, and the two for protecting the lower guard gates at Miraflores Locks are each 784 feet long, being specially arranged on account of the tidal fluctuation. They weigh about 85 pounds to the foot, nearly three times as much as the heaviest rails on the Panama railroad. The links are made from bars three inches in diameter, and each link in the principal part of the chain is 17 inches long by 10 $\frac{1}{4}$ inches wide. The chains are designed to withstand normally a tension of 220,000 pounds, or approximately 100 gross tons, which is about 50 per cent of their breaking load.

Working on Gatun Lake-Panama Water Supply System.

Work has been begun by forces of the Division of Municipal Engineering on the preparation of the site for the pumping station at the south end of the Chagres River bridge of the Panama railroad, by means of which water is to be pumped from Gatun Lake to Miraflores for purification and for distribution to all points south to the Pacific end of the Canal. The ground in the vicinity of the site has been cleared, a spur track has been laid from the main line of the Panama railroad, and excavation for the foundations of the pumping station is in progress. The force engaged in the work now includes three gold and about 50 silver employes.

Canvass of Canal Zone Population.

The Police and Fire Division is making, between June 16 and June 30, a house-to-house canvass of the population of the Canal Zone, which will vary slightly in form from the counts which the division has been making at approximately monthly intervals during the past year. The previous counts have classified Americans and all others, men, women and children in each division. The count in progress is to classify, in addition, employes of The Panama Canal and Panama railroad. The additional data have been requested by the Health Department. The canvass is made by Ancon, Empire and Cristobal police districts, each district being subdivided according to the centers of population, with a general count of the rural areas in between; in the count made between January 31 and February 10, 1914, eighty-eight places were included. The present count is to be reported by July 5.

PERSONAL.

Mrs. George W. Goethals sailed for New York on Wednesday, June 17, on the steamship *Tenadores*.

Under Joint Resolution No. 139 of the United States Senate, approved May 22, the President was authorized to grant leave of absence to an officer of the Corps of Engineers for the purpose of accepting an appointment under the Government of China on works of conservation and public improvement. Lieut.-Col. William L. Sibert, member of the former Isthmian Canal Commission and Division Engineer of the old Atlantic Division, has been selected for this mission, and on June 10, he

sailed for China. Mrs. Sibert and daughter, Miss Mary Sibert, will accompany him as far as Yokohama, Japan, where they will remain for a time. Lieutenant-Colonel Sibert will be one of a board of officers, to be designated by the Republic of China, to make an examination and report on the reclamation of the Huai River, and afterward will act as chief engineer of the Huai conservation work, in pursuance of an arrangement between the American Red Cross and the Chinese Government.

Mr. Charles H. Motsett, the new superintendent of the Panama Railroad, has been in railway service since he was 18 years of age, and has had varied experience, principally in connection with the actual moving of trains and freight. His first work was as a clerk with the Great Eastern fast freight line, in 1891, and after about a year he became yard clerk at Peoria, Ill., for the Chicago, Rock Island and Pacific Railway. For the following 12 years he served alternately as yard clerk and switchman; in 1904, he was made assistant night yardmaster for the company at Rock Island, Ill. His subsequent positions have included general yardmaster for the same company at the joint terminals for Rock Island and Moline, Ill., and Davenport, Ia.; general yardmaster at Council Bluffs, Ia.; general yardmaster at Des Moines, Ia., at the Des Moines and Valley Junction terminals; and trainmaster with the Minneapolis and St. Louis Railway, with headquarters at Des Moines. He resigned from the last named position on February 16, 1908, to accept the position of freight trainmaster of the New York division of the New York, New Haven, and Hartford Railroad. On September 15, 1909, he was appointed trainmaster of freight terminals at Harlem River, with jurisdiction over the Harlem River branch, the New York freight stations, the East River piers, and the lighterage department. On September 15, 1913, he was appointed division superintendent of the New York division of the New York, New Haven, and Hartford, which position he held until May 20, 1914, when he resigned to come to Panama.

Mr. Charles E. Weidman, who was chief of the Division of Fire Protection until April 15, when it was merged with that of Police and Prisons, sailed for New Orleans on the *Atenas* on Thursday, June 11, and from there

Estates Being Settled.

The following estates of deceased employes of The Panama Canal or the Panama Railroad Company are now in process of settlement by this office, and any claims against these estates, or any information which might lead to the location of heirs, or to the recovery of property, bank deposits, postal savings or

proceeded to his former home in Lincoln, Neb. He arrived on the Isthmus and assumed the duties of fire chief on December 1, 1905; at that time no regular organization for fighting fire in the Canal Zone had been established. The location of fire stations in the various Zone settlements as they then existed, and the organization of both paid and volunteer companies, together with the purchase of the requisite equipment to bring the service up to its present modern standard, were accomplished during his administration. Prior to coming to the Isthmus, he had been identified for many years with the Lincoln fire department, first, as fireman, and afterward rising, through successive promotions, to be its chief.

Mr. George A. Greenslade, who was until recently general superintendent in the Fourth Division in charge of terracing operations on the east bank of the Cut at Culebra, and other work, sails on the *Turrialba*, on Thursday, June 18, for New Orleans. He expects to go into private business on the Isthmus upon his return.

Mr. F. C. Clark, superintendent of Pedro Miguel and Miraflores Locks, sailed for the United States on June 12, on 42 days leave.

Missing Men.

Any one having information regarding the whereabouts of the following men are requested to communicate with Mr. J. L. Caldwell, Box 147, Empire, in order that books being held for them may be delivered: Vernon Thompson, J. A. V. VanDyck, and P. L. Roberts.

Any one having information regarding the whereabouts of Mr. E. P. Robb, who is supposed to be on the Isthmus, is requested to communicate with Mr. H. R. Wilford, General Agent, United Fruit Company, Colon, R. P.

Any one having information regarding the whereabouts of Mr. Joseph Cornell, who is supposed to be on the Isthmus, is requested to communicate with his brother, F. Cornell, Corozal.

Ancon Social Club.

The Ancon Social Club holds its regular dances on the first and third Wednesday evenings of each month at Ancon lodge hall.

W. E. MURTACH, *President*.

ANCON, C. Z., June 16, 1914.

SOCIAL LIFE OF THE ZONE.

High School Play.

The Canal Zone high school is making the tour of the clubhouses with a 3-act farce, entitled "The strange adventures of Miss Brown." It is a bright comedy, one entirely within the scope of the capabilities of the young students of the high school. In casting the play the principal parts were given to the members of the senior class. The following is the cast of characters:

Major O'Gallagen of the —th, British Army William Fraser, '14
Mrs. O'Gallagen, his wife..... Dorothy Magnuson, '14
Captain Courtney, of the —th regiment James Loulan, '14
Herr von Moser, the music master..... Fred Whiston, '15
Sergeant Tanner Hartman Stevens, '16
Mike Dougherty..... Dewey Mitten, '16
Angela Brightwell, an heiress. Gladys Mergendoller, '14
Miss Romney, head mistress in a boarding school for young ladies Marion Stevens, '14
Millicent, Clara, Matilda, schoolgirls..... Blossom Compton, '14; Dorothea Hill, '16; Esther Francis, '15
Emma, a maid..... Mildred Herman, '17

Senior Class Day Entertainment.

The senior class of the Canal Zone high school held class day at the Pedro Miguel clubhouse on Friday evening, June 12. The entertainment hall was decorated in the school colors, black and gold, with pennants, and roses. The program consisted of original papers by the class of '14, musical selections, and was followed by an informal dance. The Guatemalan orchestra furnished the music. Invitations were sent to the parents and friends of the students. This is the first time that class day has been observed in the Canal Zone high school.

College Entrance Examinations.

College entrance examinations are being conducted this week in Ancon by Mr. A. R. Lang, superintendent of schools. Two members of the high school senior class are candidates. The first college entrance examination conducted in the Canal Zone was in 1911, when there were four candidates. The following year six applications were made by Canal Zone students. The examination papers issued by the College Entrance Examination Board, with headquarters in New York City, admits successful students to the colleges and universities in the East. The Canal Zone is the center for such examinations for students from Colombia, Costa Rica, Guatemala, and other countries of Central and South America.

The "Zonian."

The annual number of the Canal Zone high school paper, *The Zonian* has been printed and placed in circulation. The cover design shows a variation from the usual gray and black, being carried out in the high school colors, black and gold. The contents include contributions by the members of the senior class and the underschool a department devoted to athletics, an attractive photograph of the Ancon high school, and separate photographs of the members of the graduating class. The money accruing from the sale of the paper is to be devoted to defraying the expenses of its publication.

Visit of Bishop Knight.

The Rt. Rev. Albion W. Knight, D. D., Bishop of Cuba and vice-chancellor of the University of the South, will arrive on the Isthmus for his annual visitation to the Panama mission of the Episcopal church on Wednesday, July 1, coming from Havana, where

he is attending the annual convocation of bishops. He will preach at St. Luke's Hospital chapel on Sunday, July 5, at the 10 o'clock service.

Camp Fire Girls at Pedro Miguel.

A movement to form a Camp Fire Girls organization in Pedro Miguel has been started, the request for the organization having been made by a number of schoolgirls residing in the village. Mrs. Fred Zane has been asked to be the guardian of the camp.

Red Cross Activities.

A Red Cross course of lectures for women on first aid is being arranged; the official list now contains 14 names. The lectures will be held in Ancon, and they will be begun as soon as ratification of the names and the appointment of the lecturer have been received from Red Cross headquarters in Washington.

Tennis Tournament.

A "Free for all singles" tournament was held at Ancon on May 30-31, and June 7. The results were, as follows:

Preliminaries—Fechtig defeated Bartholomew, 6-1; 6-2. Wells defeated Ohlson, 6-2; 7-5. Russell defeated Wechsler, 7-5; 4-6; 6-4. Shropshire defeated Erbe, 6-3; 6-2. Nevius defeated Force, 6-2; 7-5.

Second round—Fechtig defeated Smith, 6-2; 6-0. Wells defeated Russell, 6-0; 6-0. Nevius defeated Shropshire, 6-4; 6-0. Hall defaulted to Hart.

Semifinals—Fechtig defeated Wells, 6-4; 6-1. Hart defeated Nevius, 6-3; 3-6; 9-8. Nevius defaulting on account of heat exhaustion.

Finals—Fechtig defeated Hart, 6-0; 6-1.

Fourth of July Arrangements.

Two meetings of the chairmen of the Fourth of July committees have been held during the past week, the first, on Wednesday, June 10, at the Hotel Washington in Colon, and the second, on Monday, June 15, at the Hotel Tivoli in Ancon. A number of details were agreed upon at these meetings, and the arrangements, in general, including the patriotic exercises, and athletic and aquatic events are well in hand.

The train schedule will provide for the running of trains from both terminals about every two hours, with a shuttle service between Las Cascadas and Pedro Miguel connecting with all main line trains in either direction.

Refreshments will be served free on the dock, as in previous years. The Cristobal hotel will be kept open for as many hours during the day and evening as practicable, for the serving of meals at 30 cents each in either coupons or cash. Sandwiches will be sold

throughout the day at the Canal clubhouse, and a special holiday service will be provided for at the Hotel Washington.

Provision will be made for dancing in the afternoon, as well as in the evening, and a space on the dock 200 feet in length and full width will be reserved for this purpose. The chairman of this committee has engaged the Colon municipal band, in addition to the Tenth Infantry band, to furnish music during the day and evening.

The chairman of the printing and publicity committee has been authorized to send invitations and complimentary transportation to business men and others in Panama and Colon who subscribed to the Fourth of July fund in previous years.

The Hon. William Jennings Price, United States Minister to Panama, has been invited to deliver the oration, and has accepted. A school chorus is being arranged in connection with the patriotic exercises by the superintendent of schools, who requests that all elementary schoolchildren above the third grade, who expect to be present on that day, drill on the following songs: "America," "Star spangled banner," and "Red, white and blue." Badges will be given those taking part.

The final meeting of the chairmen of the general committees will be held at the Hotel Washington in Colon on Thursday, June 25.

PROGRAM OF ATHLETIC EVENTS.

At a meeting of the committee on entertainment held at Cristobal on June 13, the following athletic events were decided on for the Fourth of July meet:

1. 100-yard dash (preliminaries and finals.)
2. 75-yard dash for boys.*
3. 12-pound shot put.
4. 100-yard low hurdles.
5. Running high jump.
6. 220-yard run.
7. Potato race.*
8. Running broad jump.
9. Pole vault.
10. 400-yard run.
11. Boys' relay, 75 yards, four boys in each team.*
12. 880-yard run.
13. Wall scaling contest. (Coast Artillery and Tenth Infantry.)*
14. Three-legged race.*
15. Tug-of-war. (eight men on a team.)*
16. One mile relay. (four men on a team.)

An entry fee of 25 cents must accompany each entry blank, this fee to be returned if the person competed. The events marked (*) are special events; all others are regular events. No one entered in the regular events can compete in the special events. In all events, except the tug-of-war, and the wall scaling contest, the prizes will be gold, silver, and bronze medals. The age limit of boys will be 16 years, and entry must be signed by parent or guardian. Boys will not be allowed to compete in the regular events. All entries accompanied by fees must be sent to A. N. Kjellander (clerk of course), care of Y. M. C. A., Empire, C. Z.

Competitive Pistol Shoot.

The results of the firing in the competitive

pistol shoot held by the police division at the Empire range on Saturday, June 6 were, as follows:

Order.	Name.	Rank.	SCORE.*		Aggregate
			Bullseye target.	Moving target.	
1.....	Y. L. Harvill.....	1st-class policeman.....	134	44	178
2.....	O. G. Walters.....	1st-class policeman.....	130	38	168
3.....	J. M. Davis.....	Corporal.....	125	41	166
4.....	L. A. McIntyre.....	Sergeant.....	123	29	162
5.....	J. M. Feeley.....	Corporal.....	125	36	161
6.....	A. Durham.....	1st-class policeman.....	126	32	158
7.....	C. W. Barber.....	Chief of division.....	108	41	149
8.....	E. F. Ball.....	1st-class policeman.....	122	25	147
9.....	E. J. Krueger.....	1st-class policeman.....	104	34	138
10.....	Syd. King.....	Policeman.....	116	21	137
11.....	P. F. Lewis.....	1st-class policeman.....	83	45	128
12.....	M. Healey.....	1st-class policeman.....	81	24	105

*Possible score 200.

The contestants making the three highest scores will be awarded medals.

SANITATING PANAMA.

Methods Undertaken to Safeguard the Public Health.

The Panama Health Officer has established a score card system in connection with the inspection of bakeries, hotels, restaurants, bottling works; in fact, any place where food and drinks are prepared, or served. The requirements enumerated on these score cards vary to some extent, dependent on the character and necessities of the place, and in this manner, the regulations for bakeries differ in some respects from those for hotels. One hundred is regarded as a perfect score, and each requirement listed on the card is represented by a certain division of the whole number. The score card for the bakeries, which is more or less typical of all of them, provides, in addition to the name of the bakery, address, owner, date of scoring, and score, the following:

	Perfect score.
Room free from contaminating surroundings.	4
Tight, smooth floors.	2
Tight, smooth walls and ceiling.	2
Light (Sunlight, 4; electric light, 2; gaslight, 1)	4
Ventilation.	2
Large, convenient sinks.	4
Convenient furnishings and machinery.	2
Cleanliness of floors.	6
Cleanliness of walls.	4
Cleanliness of ceiling.	2
Cleanliness of tables and furnishings.	10
Cleanliness of sinks, 4; shelves, 2.	6
Utensils-mixers.	4
Utensils-pans, 2; knives and cutters, 2.	4
Clean cloths for rolling jelly rolls, etc.	2
Freedom from flies, cockroaches, and other insects.	12
Attendants' aprons and overalls.	4
Attendants' personal cleanliness.	4
Storage for materials—flour.	2
Storage for materials—milk, eggs, etc.	2
Washroom and lockers.	2
Water closet.	2
Patio, yard, or alleys.	2
Disposal of refuse.	4
Storage of baked goods.	4
Transportation—wagon.	2
Transportation—drivers and methods.	2
Total.	100

It will be noted that the largest number of points credited to any individual item is 12 for freedom from insects; by far the greater number of points is credited to cleanliness in its various forms. Fifty is the minimum score

was practiced in respect to the above conditions, and in 10 cases fines were imposed. Inspection of all places of business mentioned above are to be made regularly, and by means of the score cards, an accurate tab can be kept on the sanitary conditions of the premises.

STANDARD TYPE GARBAGE CAN.

Pursuant to Section 14 of decree No. 14 of 1913, issued by the President of Panama, the Panama Health Office has approved the type of garbage can to be used in the future. The can must be strongly built of galvanized metal, 19 by 25 inches in size, and must be provided with a selfclosing cover, which shall fit over the top of the can perfectly. These cans are to be placed in an approved location, and where the floor is sloping, as in the patios of most buildings, on a concrete foundation; these bases must be at least two inches high. The covers to the cans are of wood, home made, fitted to two hinges fastened to the wall of the building, and to prevent them from staying back, when opened, a wooden check is fastened to the wall at a point where it will strike the covers about midway. The accompanying sketch shows how the can appears when in proper position.

Under the new arrangement, it is mandatory on the property owners to provide their premises with these cans at their expense, whether occupied by themselves, or by tenants, and a reasonable length of time from the posting of the notice will be allowed in which to comply. Garbage cans will hereafter be sold at \$5.25, Panama silver, each, and the selfclosing covers at \$1, Panama silver, each. The concrete foundations will be installed by the health authorities at actual cost.

The adoption of a standard type of garbage can, and making its use mandatory, will do away with the heterogeneous collection of containers which, in the past, has offended the eyes and nose of the passerby on Panama city streets at about 10 o'clock in the evening, and will tend to greatly improve sanitary conditions, as under the tolerated custom above referred to, a large proportion of the contents

tricts; two collections in others, and one in the residence section. The practice indulged in by the garbage collectors ever since the collection of garbage was first begun, namely, of throwing the cans to the sidewalk or street with all the force at their command, after emptying them, has been discontinued, and this historic nuisance is now subject to a fine. MILK AND DAIRY INSPECTION AND TUBERCULIN TESTS.

A first inspection has been completed of all the dairies and their product in the environs of the city, the Health Officer extending his jurisdiction, however, only to those dairies and keepers of cows that produce milk for local resale and consumption. Only two keepers of cows were found that did not come up to the proper standard, and these did not produce milk for public sale. On the whole the quality of the milk was found to be good, this being aided by the fact that most of the dairy-men stall feed their cows. The containers which the retailers use for keeping the milk have been looked upon in some quarters with suspicion, but the investigations of the Health Office show that, as a rule, they are regularly and properly cleansed, and generally free from contamination. Many retail dealers boil the milk upon its delivery to them to keep it fresh longer; many Panama housekeepers also boil the milk as a safeguard.

The Health Office is now preparing to make a tuberculin test of dairy cows and meat cattle, and has arranged with the Panama authorities, whereby the city will furnish the services of its official veterinarian, while the Health Office will supply the tuberculin, loan the instruments, and employ one man as assistant. The few tests made to date show surprisingly few infected cattle.

SALE OF LARVICIDE.

Arrangements have been made whereby larvacide will be sold to residents of the cities of Panama and Colon at cost. The price will be 50 cents, United States currency, per gallon, or 15 cents, United States currency, per liter. The containers in amounts less than one gallon will be supplied by the health authorities free; containers of one gallon capacity, or over, must be supplied by the purchaser, or paid for. The use of larvacide is particularly valuable around hotels and restaurants as a destroyer of flies.

VACCINATION.

The vaccination campaign is still on, and has been made to include the adult population, as well. Over 4,000 persons in the city of Panama have been treated to date.

Obituary.

Clarence O. Hobson, an American living at Mount Hope, died at a private hospital in Colon on Wednesday, June 10. He arrived on the Isthmus and entered the Canal service as a fireman on November 5, 1906; in September, 1907, he was promoted to steamshovel crane-man, and on September 1, 1910, to steamshovel engineer, a position he held until he resigned on May 26, 1912 to go into private business. Prior to coming to the Isthmus, he served six months as a private, six months as a corporal, and two years as a sergeant in the 7th Artillery. He was born at Marion, Ind., was 32 years of age, and married. He is survived by his wife and two children. His father, J. H. Hobson, lives at Delong, Ind. The funeral services will be held on Sunday, June 21, at 2 p. m., at the Union chapel, Cristobal. The Masonic burial service will be read.

SELF-CLOSING GARBAGE CAN AND STAND IN USE IN PANAMA CITY.

permissible; all owners of bakeries who fall below this standard upon an inspection are subject to a fine, or the closing up of their places of business. In an inspection made recently of the bakeries in Panama city, it developed that, in many cases, gross negligence

of the cans fell out, or the cans were kicked over into the street before the garbage wagon made its rounds. In order to adequately care for the garbage, the Health Officer has arranged that, in future, three collections in every 24 hours will be made in certain dis-

PERMANENT QUARTERS.

Reduction in the Number to be Built Owing to Insufficiency of Funds.

Owing to a curtailment of the allotment of funds for the construction of permanent buildings at the new Balboa townsite for the fiscal year beginning July 1, 1914, a reduction in the number of permanent quarters previously planned has been decided on. The plans contemplated the erection of 30 quarters of the 4-family type, and 15 of the 2-family type. The change will reduce the number of the 4-family type houses to 28, and the number of 2-story, 2-family type houses to nine; work is in progress by the permanent building division on all of these quarters at the present time. Only one of the new buildings has been completed to date, namely, a 4-family quarters, house No. 702, one of the first to be begun. It is now occupied, assignments to space in it having been made by the district quartermaster to employees of the Mechanical Division.

The new quarters vary but little from each other in the details of construction, the differences being principally confined to the front steps and entrances, the design of which conforms to the topography of the ground on which the building stands. The walls on the interior of house No. 702 were finished in white cement, but in the remainder of the buildings a hard white plaster coat will be applied. In the 4-family houses, each family is provided with a sitting room, dining room, two bedrooms, a large front porch, bathroom, and kitchen. The washing is done on the kitchen veranda, and the drying may be done in the basement, to which access is had by the occupants of the house by a common stairway descending partly in the interior, and partly on the exterior of the building. All the houses of the permanent 4-family type are to be numbered from 700 up, and the 2-family houses from 800 up; the numbers 500 to 700 in the Ancon-Balboa district are reserved for the buildings in the silver settlement at La Boca, and the numbers below 500 for the wooden buildings in this district existing, or hereafter to be erected.

The curtailment of funds will also affect some of the proposed public buildings. The only structures in the new town of Balboa of a permanent type authorized and remaining to be erected are the railroad station, the cost of which is to be borne by the Panama railroad, the commissary, the cost of which will be paid out of the commissary funds, a combined police station and courthouse, and a fire station. A concrete motor garage had been planned, but this has been changed to a wooden building. The schoolhouse will be built of material in four Type-5 buildings to be taken down in the line settlements.

Joint Land Commission.

No cases have been set for hearing for the week ending June 27, as the time of the commissioners will be fully occupied with the consideration of cases already heard. On Friday, June 19, the commissioners will hear the arguments on the question of squatters' rights.

Suction Dredge "Culebra" Returns to Pacific Side.

The suction dredge *Culebra* returned to Balboa from the Atlantic side on Sunday, June 14, leaving Cristobal Harbor at about 8 a. m., and arriving at Balboa at about 5 p. m. The passage of the locks was made successfully

and the trip was without special incident. The dredge has been set at work deepening the berth of vessels alongside the Panama railroad steel pier, and when this has been completed, it will be used in other dredging operations in the Pacific entrance. The *Culebra* was accompanied by the tug *Mariner*, two barges loaded with coal, and a coal hoist. This is the first continuous passage of a vessel the size of the *Culebra* through the Canal.

Notice Relative to Accrued Leave Payment.

It is the intention to pay the tickets for accrued leave earned to March 31, 1914, in July, at the same time the June tickets are paid. Accrued leave will be paid in cash unless request is received by the paymaster not later than June 25 for a Treasury check. Each ticket will be paid in full either in cash or by check and not part in cash and part by check. If a part in cash and a part by check be desired, the pay receipt will be cashed and a Treasury check in "Exchange for funds" given for the amount desired. Cash may be deposited at any pay office for a check in "Exchange for funds". All Treasury checks are signed at Empire and will be forwarded the next day to the pay office where money was deposited for delivery. This provision relates to the accrued leave payment only, and will not prevail except for that payment.

It is requested that each department designate one person or more to prepare lists of employees in that department desiring a Treasury check for his accrued leave pay, so that each employee will not have to 'phone, or write, direct to the paymaster.

JOHN H. MCLEAN,

Approved: Paymaster.

GEO. W. GOETHALS,
Governor.

EMPIRE, C. Z., June 3, 1914.

The "Santa Clara" May Try the Pacific Locks.

The *Santa Clara* of W. R. Grace and Company's steamship service, which is due to arrive at Balboa on Thursday morning, June 18, may be taken through the Pacific locks to Culebra Cut and return, soon after its arrival, for a trial similar to that made by the steamers *Allianca* and *Ancon* at Gatun Locks. The *Santa Clara* is of 6,000 gross tons, and was built at the Cramp shipyards at Philadelphia in 1913. It has a length of 404.5 feet, breadth, 53.8 feet, and molded depth of 28 feet. It is loaded with two and one-half million feet of lumber for the Panama Canal.

Increased Accommodations at Colon Detention Station.

The building formerly occupied as nurses' quarters at Colon Hospital will be turned over to the Quarantine Service, to be used as an annex to the Colon detention station, the capacity of which has been overtaxed. The employment of three attendants and one maid additional has been authorized in this connection.

Whistle Signal for Fire Alarm Service.

The following whistle signal for fire alarm service in the Canal Zone has been adopted as standard: Four prolonged blasts of from four to six seconds duration repeated three times. This signal will be sounded on whistles at power plants, when alarms are received, either by the ringing of gongs, or by telephone. Tugs claps, and other vessels

equipped with pumps and under orders to serve at fires will report at the scene promptly upon receiving an alarm and render service under the direction of the officer or fireman in charge of the district in which the fire occurs. When the above whistle is sounded by a vessel, it will indicate that there is a fire on board of it.

Results in "Telephone" Athletic Meet.

Two hundred and eleven boys and girls participated in the public school athletic "Telephone" meet held at the Balboa, Corozal, Empire, Gatun, and Cristobal clubhouses on Friday evening, June 12. The winners in the different events were, as follows:

EVENTS FOR GIRLS.

75-lb. class.

Standing broad jump—Horne, Corozal, distance, six feet three inches.

Potato race—Horne, Corozal, time, 13 2/5 seconds.

15-yard dash—Coffee, Corozal, and Brugge, Cristobal, time, 2 3/5 seconds.

90-lb. class.

Standing broad jump—Steele, Cristobal, distance, six feet 3 1/2 inches.

Potato race—Appleton, Cristobal, time, 12 2/5 seconds.

15-yard dash—Morton, Balboa, and Appleton, Cristobal, time, 2 3/5 seconds.

110-lb. class.

Standing broad jump—Clausen, Cristobal, distance, six feet 3 1/2 inches.

Potato race—Campbell, Empire, time, 18 3/5 seconds.

15-yard dash—Farrell, Cristobal, and Hall, Empire, time, 2 3/5 seconds.

140-lb. class.

Standing broad jump—Morrison, Corozal, distance, six feet two inches.

Potato race—Morrison, Corozal, time, 20 2/5 seconds.

15-yard dash—Morrison, Corozal, time, 2 3/5 seconds.

EVENTS FOR BOYS.

75-lb. class.

Standing broad jump—Miller, Corozal, distance, six feet 10 inches.

Potato race—Golden, Empire, time, 11 3/5 seconds.

15-yard dash—Golden, Empire, time, 2 2/5 seconds.

90-lb. class.

Standing broad jump—Appleton, Cristobal, distance, seven feet seven inches.

Potato race—Christian, Gatun, time, 16 2/5 seconds.

15-yard dash—Appleton, Cristobal, time, 2 2/5 sec.

110-lb. class.

Running broad jump—Engelke, Empire, distance, 15 feet.

Running high jump—Engelke, Empire, distance, four feet 6 3/4 inches.

Potato race—Watson, Corozal, time, 22 2/5 seconds.

15-yard dash—Engelke, Empire, time, 2 1/5 seconds.

140-lb. class.

Running broad jump—Penman, Corozal, distance, 15 feet 3 1/2 inches.

Running high jump—Cotton, Cristobal, distance, four feet 7 1/2 inches.

Potato race—Penman, Corozal, time, 36 1/5 seconds.

15-yard dash—Penman, Corozal, time, 2 2/5 seconds.

SUMMARY OF POINTS.

Corozal—Boys, 74; girls, 93. Total, 167.

Cristobal—Boys, 57; girls, 89. Total, 146.

Empire—Boys, 61; girls, 34. Total, 95.

Gatun—Boys, 44; girls, 17. Total, 61.

Balboa—Boys, 29; girls, 31. Total, 60.

Pedro Miguel—Boys, 11; girls, three. Total, 14.

The total number of contestants was 211, divided, as follows: Boys, 109; girls, 102.

Privileges to Colored Teachers During Vacation.

The colored teachers in the Canal Zone schools will be granted the commissary privilege, and will be allowed to retain any Government quarters they may now occupy, during the three months' school vacation, provided they are selected for the teaching staff during the ensuing school year, and provided further, that they fail in procuring other employment during this period.

Order of Isthmian Conductors.

The next regular meeting of the Order of Isthmian Conductors will be held on Sunday morning, June 21, at 9.30 o'clock, in Ancon lodge hall.

GEO. B. ALLEN, Secretary.

COROZAL, C. Z., June 15, 1914.

OFFICIAL CIRCULARS.

Notice to Mariners.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 17, 1914.

CIRCULAR No. 643-2:

OUTER, OR BAY ANCHORAGE, PORT OF BALBOA.

1. The outer, or bay anchorage, for the port of Balboa is designated, as follows:

South of latitude 8° 55', within the arc of a circle having channel buoy No. 1 as a center and a radius of three miles.

Vessels anchoring off this port should be careful to keep within these limits.

GEO. W. GOETHALS,
Governor.

Passes for Employees Working at a Distance from Their Quarters.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 3, 1914.

CIRCULAR No. 608-1:

1. An employee on the gold roll occupying family quarters of The Panama Canal at a point other than his official station may be granted a weekly pass to visit his family under the following conditions:

2. In cases where an employee occupies quarters at his official station and is transferred at the instance of The Panama Canal to a point where quarters are not immediately available.

3. In cases where an employee, who formerly occupied quarters accessible to his official station, is subsequently transferred at the instance of The Panama Canal to a distant point. For example, an employee occupying quarters at Corozal or Ancon and working at Balboa would be regarded as accessible to his official station, but if subsequently transferred to Cristobal, he would be granted a weekly pass.

GEO. W. GOETHALS,
Governor.

Measuring of Sand, Gravel and Stone.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 1, 1914.

CIRCULAR No. 637-2:

In order to simplify accounting, Circular No. 637-1 amending Circular 637 as regards the measurements of large and small Western dump cars, will be considered effective as of June 1, 1914.

GEO. W. GOETHALS,
Governor.

Caution Against Unauthorized Climbing of Track-span Bridges.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., June 10, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

Attention is called to the placing into service of two lighthouse circuits, which have been run on the transmission line bridges (1) between New Gatun and Mindi (west side) and (2) between Gamboa station and old Tower R (east side). These two circuits will be made alive at 2200 volts on June 15, 1914. Unauthorized climbing of track-span bridges will probably result in accident.

GEO. W. GOETHALS,
Governor.

Preparation of Material for Annual Report.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., June 12, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

It is desired that annual reports for the fiscal year ending June 30, 1914, be in this office not later than August 1. The reports will be submitted in quintuplicate, on the same size and kind of paper as that used for previous annual reports, viz., 8 by 14 inches.

Reports will be submitted to the Governor, by the Engineer of Maintenance for the Division of Erection, Electrical Division, Division of Municipal Engineering, Division of Lighthouses, and the Office Engineer; by the Division of Canal Transportation; the Division of Terminal Construction; the Dredging Division; the Mechanical Division; the Fortification Division; the General Construction Division; the Purchasing Department; the Supply Department; the Accounting Department; the Health Department; the Executive Secretary; the Washington Office; the Costkeeping Accountant, and the Special Attorney.

In cases where certain duties or certain parts of the construction work have been transferred from one department or division to another, or where new departments or divisions have been created, the department or division in which the work or duties are lodged as of June 30, 1914, will render report for the entire fiscal

year, securing any necessary data from the official formerly in charge of the work.

The official photographer will take the necessary photographs to illustrate the report. Those departments or divisions whose reports require illustration should notify this office immediately what photographs will be required, so that the work may be planned properly. The photographs are intended to show the progress of the work, especially new features, and no photograph will be included the subject of which was sufficiently covered in a former report.

GEO. W. GOETHALS,
Governor.

Accountable Official.

THE PANAMA CANAL,
OFFICE OF THE AUDITOR,
EMPIRE, C. Z., June 8, 1914.

CIRCULAR No. 60:

All concerned—Effective this date, Mr. F. C. Nichols, assistant engineer, Division of Terminal Construction, is designated an accountable official.

H. A. A. SMITH,
Auditor, The Panama Canal.
Approved: GEO. W. GOETHALS,
Governor.

List of Numbered Panama Canal Circulars.

THE PANAMA CANAL,
OFFICE OF EXECUTIVE SECRETARY,
CULEBRA, C. Z., June 12, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

For the convenience of officials and employees who are keeping a file of Panama Canal circulars, the following list of numbers of circulars issued to date is given to enable a check to be made against the various files:

600 to 600-3, inclusive.	630 to 630-1, inclusive.
601 to 601-8, inclusive.	631 to 631-1, inclusive.
602 to 602-7, inclusive.	633 to 636, inclusive.
603 to 603-3, inclusive.	637 to 637-1, inclusive.
604 to 607, inclusive.	638.
608 to 608-1, inclusive.	639 to 639-1, inclusive.
609 to 613, inclusive.	640 to 642, inclusive.
614 to 614-1, inclusive.	643-1 to 643-2, inclusive.
615 to 617, inclusive.	644 to 649, inclusive.
618, 618-Rev.	651 to 659, inclusive.
618-1.	660 to 660-14, inclusive.
619 to 622, inclusive.	661 to 661-9, inclusive.
623 to 623-1, inclusive.	662 to 665, inclusive.
624 to 629, inclusive.	666, 666-Rev.
	667 to 673, inclusive.

C. A. McILVAINE,
Executive Secretary.

Corral Charges to be Paid in Advance.

THE PANAMA CANAL,
OFFICE OF EXECUTIVE SECRETARY,
CULEBRA, C. Z., June 9, 1914.

Attention is called to the provisions of Circular No. 672 that corral charges must be paid in advance, and not later than the 5th of each month.

C. A. McILVAINE,
Executive Secretary.

Acting Superintendent of Pacific Locks.

CULEBRA, C. Z., June 12, 1914.

To all concerned—During the absence of Mr. Frank C. Clark on vacation, Mr. Ernest E. Lee, in addition to his other duties, will act as superintendent of the Pacific locks.

H. F. HODGES,
Engineer of Maintenance.

Sailing of the "Advance" and "Cristobal."

PANAMA RAILROAD COMPANY,
OFFICE OF SUPERINTENDENT,
COLON, R. P., June 15, 1914.

CIRCULAR No. 434:

All concerned—The steamship *Advance* will sail from Pier 11, Cristobal, on Friday, June 19 at 3 p. m., instead of June 22, as scheduled.

The steamer *Cristobal* will sail from Pier 8, Cristobal, on Monday, June 22, at 3 p. m., instead of June 18, as scheduled.

C. H. MOTSETT,
Superintendent.

Northern District, Division of Municipal Engineering.

GATUN, C. Z., June 10, 1914.

To all concerned—During the absence on leave of Mr. E. H. Chandler, superintendent, northern district, effective June 12, 1914, Mr. W. F. Ashton will be in charge of the municipal engineering work in that district, as acting superintendent.

GEO. M. WELLS, Resident Engineer,
Division of Municipal Engineering.

Supplies for the Canal.

The following steamers, with supplies for The Panama Canal and the Panama Railroad Company, arrived at

the ports of Colon, Cristobal, and Balboa during the two weeks ending June 13, 1914:

Origen, May 31, from Mobile, with 297 pieces creosoted switch ties, for stock.

Prinz August Wilhelm, June 2, from New York, with 60 barrels carbolineum, for Division of Terminal Construction.

Ucedia, June 3, from New Orleans, with 53 boxes window frames, sash, etc., for Division of Erection; 12,511 feet B. M., oak lumber, for Division of Terminal Construction; 11,568 feet B. M., yellow pine lumber, for Mechanical Division; 57 pieces untreated piling, 46 barrels rosin, for stock.

Zacapa, June 3, from New York, with 29 cases electrical material, for Panama Railroad Company; 255 bars steel, for stock.

Alhauca, June 3, from New York, with 32 packages chain fender material, for Division of Erection; 20 cases machinery, 31 boxes ventilators, for Division of Fortifications; 60 pieces pipe, for Division of Municipal Engineering; 58 bundles pipe, for Panama Railroad Company; 5,500 pieces hollow tile, for permanent buildings; 38 cases nuts, 160 bundles wheelbarrows, 12 barrels metallic oil, 32 cases paint, 34 cases rubber hose, 17 barrels soap, 27 cases files, 70 crates galvanized iron pails, for stock; and a miscellaneous cargo, the whole consisting of 6,344 packages, weighing approximately 208 tons.

Atenas, June 4, from New Orleans, with 81 packages wire screen partitions, 2,072 pieces oak lumber, for Mechanical Division; 10 pieces untreated piling, for Division of Terminal Construction; 163 pieces untreated piling, 56 crates paste, 11 cases rubber, for stock.

Pastores, June 5, from New York, with 16 reels cable, for Mechanical Division; 147 packages steel shelving, for stock; nine crates valves, six pieces pipe, for Division of Municipal Engineering; 46 packages lighting and ventilating material, for Division of Fortifications; 49 packages chain fender material, for Division of Erection.

Thelma, June 5, from Brunswick, Ga., with 870 pieces untreated piling, for Division of Terminal Construction.

Ilro, June 6, from Gulfport, with 150 pieces oak lumber, 39 barrels oil of creosote, 6,825 pieces standpipe and fittings, 1,603 pieces cast iron pipe, for stock.

Cusco, June 9, from San Francisco, with 735,798 feet B. M., fir lumber, 732 feet B. M., sugar pine lumber, for stock.

Prinz Sigismund, June 9, from New York, with 222 coils manila rope, for stock.

Porismina, June 10, from New Orleans, with 16,548 feet B. M., oak lumber, 12,548 feet B. M., yellow pine lumber, for Mechanical Division; 1,800 feet B. M., oak lumber, 15,535 feet B. M., yellow pine lumber, 54 pieces untreated piling, for stock.

Almirante, June 10, from New York, with 22 pieces, and two boxes pump parts, for Dredging Division; 20 boxes warehouse trucks, for Panama Railroad Company; 33 packages lighting fixtures, for Division of Fortifications.

Turrialba, June 11, from New Orleans, with 252 barrels brick, for Panama Railroad Company; 54,977 feet B. M., yellow pine lumber; 43,455 feet B. M., poplar; 17,403 feet B. M., oak lumber, for Mechanical Division.

San Mateo, June 11, from New York, with 247 barrels lime, for permanent buildings; 10,560 bags cement, for stock.

Cristobal, June 11, from New York, with 52 boxes electric lamps, 200 pieces angle iron, 42 bundles bar iron, 143 barrels clay, for Mechanical Division; two towing locomotives, for Division of Erection; 115,440 bags cement, 25 boxes tools, 1,209 bales hay, 283 coils wire, 616 boxes bolts, 305 kegs bolts, for stock; and a miscellaneous cargo, the whole consisting of 118,529 packages, weighing approximately 6,185 tons.

Tenadores, June 12, from New York, with 31 kegs copper nails, two cases copper nails, for permanent buildings; three fender chains, for Division of Erection; 40 crates cant hooks, 40 cases candles, 200 cases linseed oil, for stock.

Stages of the Chagres River, Gatun Lake, and Miraflores Lake.

Maximum heights of the Chagres River, Gatun and Miraflores Lakes for the week ending midnight, Saturday, June 13, 1914. All heights are in feet above mean sealevel:

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

GENERAL.

The schedule for moving pictures for the week, June 22 to 27 is, as follows: Monday, Corozal; Tuesday, Balboa and Gatun; Wednesday, Culebra; Thursday, Pedro Miguel; Friday, Cristobal; Saturday, Empire.

COROZAL.

The high scores on the bowling alleys for the week ending June 13 were, as follows: *Tenpins*—Parkis, 244; Thirsk, 230, 211; C. Sims, 224; Davis, 206. *Duckpins*—Parkis, 131, C. Sims, 131; Phillips, 115, 102; Ruggles, 106, 103; Davis, 102, 100.

PEDRO MIGUEL.

The Tenth Infantry band gave a concert on Thursday evening, June 11.

The following high scores were recorded in duckpins last week: Braw, 106, 102, 100; Davis, 110, 102, 102; Van Fleet, 104; Kent, 104; Pendry, 102; Whiston, 100. The ragtime duckpin tournament closed with Murray and Whiston in the lead, with a score of 587. The high individual score was made by Vandeburgh, 121. Gold medals will be given for the doubles, and a silver medal for the individual high score. A pair of shoes will be given for high tenpin score during June. Farrar is leading with a score of 231.

Probably the last game of duckpins of the season was rolled on the local alleys on the evening of June 11, between Corozal and Pedro Miguel. The score follows: Corozal, 404, 424, 451; Pedro Miguel, 437, 446, 454.

EMPIRE.

Mr. W. H. Warr, who has been secretary of the Empire clubhouse since September 23, 1911, has resigned to take effect June 21. Mr. A. N. Kjellander has been appointed acting secretary. The Empire clubhouse is to be reerected at Balboa, and it is likely that the work of demolition will start in July. Since the time of its opening in 1907, the clubhouse has been well patronized by employees and their families. The largest membership recorded was 410 on August 31, 1913, and the highest percentage of membership, according to the male gold population, was 71 per cent recorded in September, 1912. The average membership since the date of opening has been 354.

GATUN.

A farewell reception was given at the clubhouse on Saturday evening, June 13, in honor of the officers and men of Companies I and M of the Tenth Infantry. The clubrooms were appropriately decorated with American flags, bunting, ferns, flowers, etc. An outdoor band concert was given between 7.30 and 8.30 p. m. An indoor baseball game between Cristobal and Gatun followed, which resulted in a victory for the latter; score, Gatun 13; Cristobal 11. At 9.30, an informal reception was held on the first floor, when the following program was given: Remarks, by the secretary; piano solo, Mrs. D. R. Walker; tenor solo, Private Haas Wiedemann; recitation, Sylvia Marie Edwards; Spanish recitation, Private Goldenthal; bass solo, Louise Cantor; monologue, Private Thompson; baritone solo, Private Menery; hand balancing, Private DeFeld; closing remarks, W. C. Gayer, chairman of the executive council. After the program, home made cake and punch were served, following by general singing.

The standing in the ragtime tenpin tournament is, as follows:

SCORE JUNE 8 TO JUNE 12, INCLUSIVE.

Humphrey.....	169	178	137—484
O'Meara.....	175	173	175—523—1,007
Conley.....	134	174	135—443
Humphrey.....	157	189	144—490—933
O'Meara.....	187	170	188—545
Gray.....	129	104	124—357—902
Ley.....	145	127	102—374
Hodges.....	156	165	204—525—899
Easter.....	138	168	159—465
Hodges.....	177	141	114—432—897
Conley.....	155	140	179—474
Kiger.....	117	166	139—422—896
Schandler.....	123	191	131—445
Conley.....	131	169	138—438—883
Ley.....	138	146	118—402
Humphrey.....	161	187	130—478—880
Gray.....	150	97	129—376
Schandler.....	136	130	193—459—835
Bullock.....	105	130	143—378
Hodges.....	166	143	141—450—828

The standing in the tropical pool tournament is, as follows: Wright, 764; Duffy, 682; Conley, 610; Feehan, 434; Goree, 382; Loulan, 303; Kerruish, 300.

The chess match between Cristobal and Gatun on Saturday, June 13, resulted in a tie 2½ and 2½. Gatun, however, won the rubber, making the results 3½ and 2½. The players were Verner and Brown for Cristobal, and Marquand and Morgan for Gatun.

Messrs. Wright and Sales gave piano and drum music

at the motion picture entertainment on Tuesday evening, June 16.

CRISTOBAL.

The "Doves" defeated the "White Sox" on Tuesday evening, June 9, in the indoor baseball league; score, 19 to 7.

Minot Cotton broke the Cristobal indoor record for the high jump for boys, when he cleared the bar at four feet, seven and one half inches, during the recent school telephone meet.

An interesting feature of the consideration of the state of affairs in Mexico before the discussion club, on Thursday, June 11, was the large number who took part in the discussion. The preponderance of sentiment seemed to be that Mexico will not have peace until the United States brings it about. The debate scheduled for June 25 is on the proposed treaty with Colombia.

The checker match between Culebra and Cristobal, on Saturday, June 13, resulted in a victory for Culebra. The scores follow:

Culebra.	W.	L.	D.	Cristobal.	W.	L.	D.
Barte.....	5	4	1	Moore.....	1	9	0
Armstrong.....	6	3	1	Stevens.....	0	8	2
Rattiner.....	8	1	1	Larsen.....	4	5	1
Dr. Dunn.....	8	1	1	Morgan.....	2	8	0
Whaler.....	5	4	1	Knight.....	6	2	2

Totals... 32 13 5 13 32 5

The members of the girls' clubs and gymnasium classes gave Mr. and Mrs. Brittin a surprise in the form of a reception on Wednesday, June 17.

Mr. H. D. Brittin, assistant secretary of the Cristobal clubhouse, sails on the *Cristobal* on a 60-day leave of absence. Mr. Brittin proposes to spend most of his time while away at the Harvard summer school, finishing his course there; also, as one of the faculty.

The high duckpin scores for the week were: Harper, 114; Margon, 110; Claherty, 103; Bevington, 106; Gill and Collins, 104; G. Butters, 103; Goebel and C. Cotton, 102; Russell, 101; Kaunitz, 100.

The regular single folks' duckpin tournament will be held on Monday, June 22.

Misdirected Letters.

ANCON, C. Z., June 17, 1914.

75th meridian time.

COMMISSARY DEPARTMENT.

Ancon Commissary Opened.

The new commissary at Ancon was opened for business on Monday, June 15. The force at present is nine gold and 25 silver employees. The cold storage will not be consolidated with the rest of the commissary for about a month, as the ice box in the new building will probably not be completed before then. Mr. T. H. Hurst, formerly manager of Cristobal commissary, has been placed in charge.

Strawberries.

Owing to the fact that strawberries are poor keepers even under the best of conditions, shipments by the commissary department to the Isthmus have been nearly always attended with loss. This season, the commissary has made more than the usual effort to supply its patrons. Two shipments have been received to date, and if the market is favorable, there will probably be two more. The *Alliance* on its last trip down brought 5,984 quarts, but of this quantity only 3,665 quarts were sold; 19 quarts were used to refill boxes, and 2,300 quarts were condemned. The spoiled berries caused a net loss to the Supply Department on this shipment.

Special Orders for Supplies Not in Stock.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., June 9, 1914.

CIRCULAR No. 564:

This office will hereafter accept special orders, from persons entitled to commissary privileges, for special material and supplies not carried in the regular stock. Such material and supplies will be sold to patrons at cost price, plus 10 per cent to cover clerical expense, exchange, etc., and actual cost of transportation on the Isthmus.

Orders should be accepted only for specified articles obtainable from specified firms, and will not be subject to return or exchange if the specified article is found not to be in accordance with specifications; and no orders should be accepted for special brands or articles when similar articles are carried in the regular stock, without reference to this office.

All orders must be transmitted to this office in writing, accompanied by cash, check, or money order made payable to the commissary cashier, Cristobal, Canal Zone, in an amount equal to the estimated value of the articles, plus 10 per cent.

Patrons must be informed that it requires from four weeks to four months to obtain articles for special deliveries. Actual estimates of time may be obtained from this office in each case, by telephoning the requisition desk, No. 169, Cristobal.

BENJ. L. JACOBSON,
Depot Commissary.

Approved:

F. O. WHITLOCK,
Assistant Chief Quartermaster.

Sale of Palm Beach Suits.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., June 15, 1914.

CIRCULAR No. 565:

All storekeepers—A small supply of Palm Beach suits has been received at this depot.

Please post this circular conspicuously and telephone customers' orders to this office, phone No. 163.

Furnish in each case the chest measurement, waist measurement, and inseam trouser length, and if the size is in stock the order will be filled and shipped on the supply train that night.

Suits made of plain cloth (not striped) on hand. Price \$6.

BENJ. L. JACOBSON,
Depot Commissary.

Commissary Cold Storage.

The commissary stores are open during the following hours: From 8 a. m. to 12.30 p. m., and 3 to 6.30 p. m. The gold departments of the Cristobal store will open at 2 p. m. on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open till 7 p. m.

Retail prices of cold storage provisions for the week beginning June 18, 1914:

* Will carry mail from the United States.
† Will carry mail to the United States.
† Will carry mail for Alabama, Arkansas, Louisiana, Mississippi, and Texas.
Panama Railroad Company's steamers sail from Piers 8, 9, and 11, Cristobal, at 3 p. m.
Royal Mail steamers leave for New York on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct, leave on Thursdays at 3 p. m., for New Orleans, via Boca del Toro and Havana, on Thursdays at 4 p. m.; for New York direct, on Wednesdays at 2 p. m.; ships for New York, via Kingston, on Thursdays at 2 p. m.; for Limon and Boca del Toro on Saturdays at 4 p. m.; and for Limon direct on Saturdays at 5 p. m.

The Hamburg-American steamers *Prinz Eitel Friedrich* and *Prinz Sigismund* sail for New York, via Kingston and Fortune Island, on Sundays at 2 p. m.; the *Prinz August Wilhelm* and *Prinz Joachim* sail for New York, via Kingston, Santiago de Cuba, and Fortune Island, on Tuesdays at 10 a. m.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,

THE CANAL RECORD,

Ancon, Canal Zone,

Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Reclamation of Swampy Area Near Panama.

The Dredging Division is preparing to begin, about July 1, a fill in a swampy area just north of the San Miguel district of the city of Panama. The fill is made at the instance of the Health Department, and is expected to render easy the prevention of mosquito breeding in an area, contiguous to Panama and Ancon, which has heretofore required a considerable amount of draining and oiling. The area extends about 1,500 feet north of the present outer limit of habitation. It is bounded on the west by the Panama railroad and enclosed on the north and east by low hills. The eastern limit is about 1,600 feet from the railroad embankment. The natural surface of the basin is at an average elevation of about nine feet above sealevel, and it is proposed to raise the surface to 14 feet above sealevel. The operations will require about 600,000 cubic yards of spoil.

This area is a part of the originally extensive flats along the course of the Curundú River. The flats between the railroad and the Canal, and between Ancon Hill and Diablo, have been extensively reclaimed, with wet and dry filling. The operations about to begin will extend the reclamation to the limit of the flats, at the bases of the hills. With the fills completed and a lagoon northeast of the cabin at Balboa Junction drained, the Curundú will be confined to narrow courses, and the places for mosquito breeding reduced to a minimum. Sheet piling is being driven along the south bank of the river, where it borders the area about to be filled, in order to preserve a clear course.

Spoil will be supplied by pipeline suction dredge No. 85, excavating in the inner harbor at Balboa. The length of discharge line to reach to the center of the area will be slightly over 8,000 feet, which is the longest discharge pipe yet used in the Canal operations. Two relay stations will be used to assist the pumping. One of them is now situated on the west

toe of the abandoned Sosa dam, and the second is being installed in the reclaimed area north of Ancon Hill, northeast of the new administration building.

Wider Footwalk on Calidonia Bridge.

Due to the steady increase in population along Calidonia road, and in the districts of Guachapali and San Miguel, the footwalk over the bridge spanning the Panama railroad is frequently congested to the point of discomfort. This is especially so in the mornings and evenings when the laborers are going to or returning from work, and on Sundays when the travel is at its greatest. To remedy the situation, the Panama Railroad Company has been authorized to build a new footwalk not less than 10 feet in width, and in case it is constructed of wood, the material will be treated with a preservative to add to its life.

Docking Charge for Small Boats at Gatun Removed.

The charge of 50 cents gold for docking cayucas at the concrete wharf near the Panama railroad station at Gatun has been cancelled. This action was taken in response to a request by the Minister of Foreign Relations of Panama on behalf of the inhabitants of the district of Siri, who have been bringing their produce to Gatun. It was found that the use of the wharf by the natives entailed no cost to the Government; no shelter was provided for them, and they were prevented, in the interests of regulation, from landing at any other place; also, that the quantity of produce brought in each boatload was so slight as to make the charge more than is equitable.

Contract for Structural Steel.

A contract was entered into with the United States Steel Products Company on May 16 for furnishing 3,000,000 pounds of structural steel for use in decking Sections d-e and e-f of the quay wall at the Balboa terminal docks. The contract price was \$0.0196 a pound, the total of the order amounting to \$58,800. The steel is to be delivered on the Isthmus on or before September 13, 1914; its erection will be performed by forces of The Panama Canal.

Land Commissioners Make Tour of Inspection.

Messrs. Federico Boyd, Levi M. Kagy, and David Marks of the Joint Land Commission, accompanied by Special Attorney Frank Feuille, District Attorney W. K. Jackson, Inspector Irwin, and William Taylor, secretary of the commission, made a tour of inspection, on Saturday, June 20, of certain lands adjoining Gatun Lake, and the Rio Gatun and Rio Chilibre. Commissioner Lewis was unable to accompany the party. The trip was for the purpose of acquainting the American commissioners with the conditions of the flooded area, and to afford them an opportunity of obtaining informa-

tion regarding the type of *fincas* being cultivated by the natives, and their mode of living, at first hand. The party left Paraiso landing in the launch *Search* early in the forenoon, went up the Rio Chagres for some distance, and afterward through Gatun Lake as far as the old site of Bohio. It returned to Panama about 5.30 p. m., having covered about 75 miles by launch during the day.

No cases have been set for hearing for the coming week, enough cases having already been heard to occupy the commissioners' time for some days.

New Railroad Timetable.

A new timetable (No. 18) will go into effect on the Panama railroad on Sunday, June 28, at 12.01 a. m. Under the new schedule, there will be only three passenger trains each way daily, with the exception of Saturday, on the main line, the trains now leaving Panama and Colon at 7.25 and 9.30 p. m., respectively, having been annulled. On Saturday nights, a train will leave either terminal at 11.30 o'clock, arriving at Colon at 1 a. m. on Sunday morning, the running time being one hour and a half. The departing time of the morning and evening trains out of Colon, and the evening train out of Panama, has been changed slightly.

Five trains only will be operated each week day in the Panama-Pedro Miguel Junction shuttle train service; on Sundays two additional trains will be run.

On the Las Cascadas branch, (Las Cascadas to Pedro Miguel Junction), six trains will be operated on week days and two additional trains on Sundays. Nos. 47 and 48 on this schedule will make connections with the evening trains out of Panama and Colon.

The number of trains on the Colon-Gatun shuttle schedule has been reduced from six to four, with some changes in time from the present hours of arrival and departure at terminals. The new timetable includes Balboa in the main line and Panama-Pedro Miguel Junction services.

Canal Excavation in May.

The grand total of Canal excavation to June 1, 1914, was 221,940,499 cubic yards, leaving 10,412,501 cubic yards remaining to be excavated, under the revised estimate of July 1, 1913.

The total excavation for the month of May was 1,115,412 cubic yards, as compared with 1,223,925 cubic yards for April. The wet excavation amounted to 923,531 cubic yards, and the dry excavation to 191,881 cubic yards.

In the Atlantic section, the total excavation for May was 141,125 cubic yards, all by dredges. Of this amount, 138,581 cubic yards were removed from the Atlantic entrance by the suction dredges *Caribbean* and *Culebra*, and 2,544 cubic yards were taken out at the coaling basin.

Of the 635,731 cubic yards excavated in the Central section, comprising Culebra Cut and

the Chagres territory, 473,381 cubic yards were removed by the dredges, 87,100 by hydraulic monitors, and 75,250 cubic yards were taken out by steamshovels on the west bank of Culebra Cut, south of Culebra village, in relieving the pressure as a preventive against slides.

In the territory of the old Pacific Division, operations by dredges resulted in the removal of 113,543 cubic yards from the inner harbor, and 78,382 cubic yards from the Pacific entrance. Dry excavation in this section amounted to 116,631 cubic yards, of which 116,156 cubic yards were excavated at the terminal site, and 475 cubic yards were plant excavation for the terminal construction.

A detailed statement of excavation for the month of May, follows:

By "Work" excavation is meant excavation actually made for one of the constituent parts of the Canal, such as prism, diversions, locks, etc.; that is, it represents material taken from the area to be occupied by the Canal and constitutes excavation useful for the completed Canal.

By "Plant" excavation is meant excavation outside any of the constituent parts of the Canal, such as

prism, diversions, locks, etc. It includes material necessary to be excavated for construction purposes only, and is chargeable against the particular plant item for which it is performed, such as prism, diversions, locks, etc.

PERSONAL.

Mr. Edward Schildhauer, accompanied by Mrs. Schildhauer and their two children, returned from leave on Sunday, June 21.

Mr. Henry Schoellhorn, assistant engineer in charge of the erection of the 250-ton floating cranes, returned from Germany, by way of New York, on Sunday, June 21.

Mr. W. J. Holmes, who resigned as superintendent of transportation in the Division of Terminal Construction on June 15, sailed on Thursday, June 18, on the *Turrialba*, for New Orleans, and from there will proceed to Pasadena, Cal. He entered the Canal service as trainman on January 9, 1908, coming here from Chattanooga, Tenn. He was promoted to conductor on March 23, 1908; to yardmaster on August 1, 1908; to trainmaster on September 1, 1909; and to superintendent of transportation in the Second Division on November 1, 1913. During the greater part of his period of Canal employment he was with the former Pacific and Fifth Divisions, his transfer from the latter division to the Second Division taking place on October 11, 1913. Prior to coming to the Isthmus he was for 19 years connected with the Erie, Queen and Crescent, and Seaboard Air line railroad systems in various capacities.

Mr. Harry E. Bovay, chief clerk in the Health Department, has resigned to take effect June 26, and will sail on the steamship *Heredia* for New Orleans, via Havana, on Thursday, June 25, proceeding from there to his former home at Rodney, Mich. He was appointed to the Canal service as a stenographer in the former Department of Sanitation on March 7, 1905, and arrived on the Isthmus on March 14. On February 8, 1906, he was promoted to chief clerk of the department, a position he has held continuously since.

Civil Service Examinations.

Examination will be held, probably on July 26, for the positions of stenographer and typewriter, Isthmian Canal Service; stenographer and typewriter, Philippine Service; and typewriter, Isthmian Canal Service. Applications will not be received after July 15; this date

Estates Being Settled.

The following estates of deceased or insane employees of The Panama Canal or the Panama Railroad Company are now in process of settlement by this office, and any claims against these estates, or any information which might lead to the location of heirs, or to the recovery of property, bank deposits,

may be changed if necessary. Persons interested should request a copy of Form 1424, which contains information in regard to the abovenamed examinations.

The place and date of examination should be omitted in application forms. A card of admission will be sent to those found eligible to be admitted, just before the examination.

Competitors must bring their own type-writing machines to the examination room.

In answer to questions as to residence applicants must show residence in a State or Territory of the United States, and county thereof, to the time of filing application.

ISTHMIAN CIVIL SERVICE BOARD.

CULEBRA, C. Z., June 20, 1914.

Strangers Club Activities.

An old time patriotic "Stag" dinner will be given at the Strangers Club on Fourth of July Eve. Festivities will begin promptly at 8.30 o'clock. Reservations must be made in advance for the event.

A dinner concert from 6 to 8.30 will be the event for the evening of July 4, although "Open house" will be the rule all day. The Board of Governors has authorized club privileges to visitors on this day, and special visitors' cards may be had from any member. Special accommodations for ladies will be provided, and a matron will be on duty in the ladies' cloak room; ladies are invited to use any facilities available for rest or recreation.

The hours for dining will be: Breakfast, from 6 to 9; luncheon, from 11.30 to 2; dinner, from 6 to 8.30. Sandwiches, coffee, etc., may be had at any time.

The next informal dance is scheduled for Saturday evening, June 27.

FRANK SCOTT,
Chairman on Entertainment.

Metal Trades Council.

The next regular meeting of the Panama Metal Trades Council will be held on Sunday afternoon, June 28, at 1.30 o'clock, in the Balboa clubhouse.

H. A. S. LEVERING, Secretary.

Knights of Columbus.

A regular meeting of Cristobal Council, No. 1689, will be held in the lodge hall, building No. 1, Cristobal, on Sunday, June 28, at 2 p. m.

A. P. E. DOYLE,
Grand Knight.

postal savings or postal money order deposits, or any other moneys due them, should be presented at this office at once, in order that the estate may be settled as soon as possible. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once:

SOCIAL LIFE OF THE ZONE.

Odd Fellows Give Farewell Reception to the Retiring District Deputy Grand Sire.

The various lodges on the Isthmus of the Independent Order of Odd Fellows, together with the Rebekah Lodge, No. 1, held a farewell reception in honor of Deputy Grand Sire Benjamin F. Sisson, and Mrs. Sisson, in Ancon hall on Sunday evening, June 21. The entertainment began with a program of music and recitations in which the following people took part: Mrs. Martin, Mrs. Keyser, Miss Bewley, Miss Cranfill, Miss McCann, and Messrs. Dohrman, Beetham, and Rall. On behalf of the lodges, Past Grand A. Dunlop presented the retiring deputy grand sire with a hand-carved teakwood desk, and on behalf of the auxiliary, Past Noble Grand Mrs. Janet Martin presented a handsome chair of teakwood to Mrs. Sisson. Refreshments were served by the Rebekah lodge, and the evening closed with expressions of good fellowship.

Mr. Sisson, who, with his family, is leaving for his home in Fall River, Mass., has been on the Isthmus since September, 1905. He has been actively engaged in the work of the Independent Order of Odd Fellows since 1906, when, in Gorgona, a committee was formed of which he was appointed secretary, to petition for a charter to organize a lodge in the Canal Zone. This charter was granted in July, 1907; at the same time Mr. Sisson received the appointment of special deputy grand sire. He instituted Isthmian Canal Lodge, No. 1, Gorgona, on September 10, 1907. In November of the same year, Mr. Sisson was made deputy grand sire of the sovereign grand lodge in full charge of all the work of the order in the district of Panama, which appointment has been ratified each year since. The history of the Odd Fellow lodges since the appointment of the deputy grand sire to the present time is, as follows: Mr. Sisson has instituted four subordinate lodges, and one Rebekah lodge, namely: Cristobal Lodge No. 2, at Cristobal, on May 16, 1908; Canal Zone Lodge, No. 3, at Empire, on May 29, 1908; Pacific Lodge, No. 4, at Ancon, on April 30, 1910; Gatun Lodge, No. 5, at Gatun, on July 15, 1910; Isthmian Canal Rebekah Lodge, No. 1, at Gorgona, on October 10, 1908.

On March 14, 1913, Cristobal Lodge surrendered its charter and consolidated with Gatun Lodge, No. 5. On July 19, 1913, Isthmian Canal Lodge, No. 1, removed from Gorgona to Empire, and Canal Zone Lodge, No. 3, surrendered its charter and became consolidated with Isthmian Canal Lodge, No. 1. On April 7, 1914, Isthmian Canal Lodge, No. 1, removed from Empire to Ancon, and Pacific Lodge, No. 4, surrendered its charter and became consolidated with Isthmian Canal lodge, No. 1. As deputy grand sire, Mr. Sisson attended 60 installations and installed nearly 900 officers during his period of service.

Mrs. Miriam Beetham, past noble grand of the Isthmian Canal Rebekah Lodge, No. 1, has been appointed to install the officers of the lodge for the term beginning July 1, 1914, and Mr. Charles H. Beetham, past grand, has been appointed to install officers in Isthmian Canal Lodge, No. 1, and Gatun Lodge, No. 5, for the term beginning July 1, 1914.

Sunday School Bazaar.

The Sunday school of the Union church at Cristobal, assisted by the ladies' aid society of the church held a bazaar at the Government

clubhouse on Saturday afternoon and evening, June 12. The sale was opened at 3 o'clock, and continued until 10 o'clock, at which hour the announcement was made that all the articles had been sold. There were offered at the various booths, fancy articles, boudoir caps, crocheted handbags, pincushions, and home made candies, fruit punch, and ice cream. An attractive tea table was set in the center of the room. Other features were a gypsy fortune teller, and a fish pond. The total receipts amounted to \$134.34. This money will be used for the purchase of additional books for the Sunday school library. The chairman of the bazaar was Mrs. J. P. Dovell.

Closing Week of School.

The closing examinations in all grades of the Canal Zone schools, including the high school, are being conducted this week. The school work so far as the pupils are concerned will close for the summer vacation after the sessions on Friday, June 26. On the 29th and 30th, the teachers will make up their reports. On the 30th, the pupils will receive their classification cards and report cards at the school.

Train Schedule for High School Commencement Exercises.

The following special train service has been arranged for the convenience of those attending the high school commencement exercises in Panama on Friday, June 26:

A special coach on train leaving Colon for Panama at 4.45 p. m.; a special coach on train leaving Empire for Panama at 7.22 p. m.; a special coach on train leaving Panama for Empire at 10.30 p. m.; a special train leaving Panama for Colon at 10.30 p. m., arriving at Colon before midnight. No fares will be collected on these special coaches, and no form of ticket will be required. The only regular stop for the Colon special will be at Gatun. This train will not stop at Corozal, Miraflores, or Pedro Miguel. Stops will be made at New Culebra, Frijoles, Monte Lirio, and Mount Hope only on notice to the conductor.

Fourth of July Events.

The program of water sports to be held in connection with the Fourth of July celebration at Cristobal will be, as follows:

MORNING.

1. 9.00—Gasoline boat race. Gasoline boats *Dixie*, *Psyche*, and *Lirio*. Distance, about five miles. Triangular course around flag buoys. Start and finish at outer end of slip between Piers 8 and 9. Prizes, \$15 and \$10.

2. 9.15—Lifeboat race. Four-oared, single scull, and coxswain. Distance, one mile. Start from outer end of slip between Piers 8 and 9. Prizes, \$25 and \$15.

3. 9.30—Sailing canoe race. Distance, 2½ miles. From buoy off Pier 8 around flag buoys in bay and return. Prize, pennant.

4. 9.45—Gasoline boat race. Free for all. Distance about five miles. Triangular course around flag buoys. Start and finish at outer end of slip between Piers 8 and 9. Prize, \$15.

5. 10.00—Paddling canoe race. Distance, one mile. Course, from end of slip around flag buoy and finish at end of slip between Piers 8 and 9. Prizes, two gold, two silver, and two bronze medals.

AFTERNOON.

6. 1.15—Submarine descent. In slip between Piers 8 and 9.

7. 1.30—50-yard swimming dash for men. Course, between Piers 8 and 9. Prizes, gold, silver, and bronze medals.

8. 1.40—50-yard swimming race for women. Course, between Piers 8 and 9. Prizes, gold, silver, and bronze medals.

9. 1.45—50-yard swimming race for boys under 16 years of age. Age must be reliably vouched for. Course between Piers 8 and 9. Prizes, \$10, \$5, and \$3.

10. 1.50—50-yard tub race. Course, between Piers 8 and 9. Prizes, \$10 and \$5.

11. 2.00—880-yard swimming race for men. Course,

between piers 8 and 9. Prizes, gold, silver, and bronze medals.

12. 2.10—Greased spar. Free for all. Projecting from deck of lighter. Winner to take flag from outer end of spar by walking, running, or sliding on feet from lighter to flag. Prize, \$25.

13. 2.20—60-foot form dive. Each contestant to make three dives. Prizes, gold, silver, and bronze medals.

14. 2.30—Swimming race for men. Distance, one mile. Course, between Piers 8 and 9. Prizes, gold, silver, and bronze medals.

15. 2.30—Fancy diving contest for men. Height, 10 feet. Each contestant will have five dives, three specified, front, back, and 1½; two optional. Prizes, gold, silver, and bronze medals.

16. 2.30—Aquatic wrestling match. Free for all. To take place on greased 30-foot floating platform between Piers 8 and 9. Winner to be last man on platform. Prize, \$25.

17. 2.45—100-yard swimming race for men. Course, between Piers 8 and 9. Prizes, gold, silver, and bronze medals.

18. 2.50—440-yard swimming race for men. Course, between Piers 8 and 9. Prizes, gold, silver, and bronze medals.

19. 3.15—Relay swimming race for men. Distance, 200 yards. Course, between Piers 8 and 9. Prizes, four gold medals to winning team.

Address all requests for information, or correspondence in regard to entries, to the chairman, committee on water sports, Dock 13, Cristobal.

Children's Races.

There will be a new departure in field sports at the Fourth of July celebration. The smaller boys and girls of the Canal Zone schools will be given an opportunity to show their ability in this direction, and a program beginning at 3.30 p. m., and continuing until 5 p. m. has been arranged, as follows:

BOYS.

75 lbs.—60-yard dash; potato race (four potatoes); Relay race (300 yards); running high jump.

90 lbs.—75-yard dash; potato race (five potatoes); relay race (300 yards); running high jump.

110 lbs.—75-yard dash; potato race (six potatoes); relay race (360 yards); running high jump.

130 lbs.—75-yard dash; potato race (eight potatoes); relay race (360 yards); running high jump.

GIRLS.

75 lbs.—50-yard dash; potato race (four potatoes); relay race (200 yards); hop step, and jump, relay, (three to a team).

90 lbs.—50-yard dash; potato race (five potatoes); relay race (240 yards); Hop step, and jump, relay, (three to a team).

110 lbs.—60-yard dash; potato race (five potatoes); relay race (300 yards); hop, step, and jump, relay, (three to a team).

130 lbs.—75-yard dash; potato race (six potatoes); relay race (300 yards); hop step and jump, relay, (three to a team).

Each contestant will be weighed at Pier 9, between 1 o'clock and 3 o'clock on the afternoon of the Fourth of July, in the same costume in which they intend to compete. Contestants weighing a fraction of an ounce over weight are ineligible to compete in that class and will enter the next class. No competitors will be permitted weighing over 130 pounds.

It is recommended that each school select a school color. There will be no entry fee. First, second, and third prizes will be awarded in the form of printed ribbons.

Notice to Contestants in Athletic Meet.

Every effort is being made by the athletic committee to have all equipment ready, as per schedule, to be arranged for the Fourth. All officials will be instructed and expected to conduct contests on schedule time.

All contestants are hereby notified that no event will be held or delayed on account of failure of contestants to appear at starting point. Race or contest will be started as near as possible per schedule, and entry of those failing to appear on time cancelled. Usual calls will be made at dressing room on field; those failing to observe (or hear) will have no redress. Be governed accordingly.

F. G. SWANSON, Referee.

Approved:

A. B. DICKSON,
Chairman, Athletic Committee.

LABOR FORCE AND QUARTERS IN MAY.

The force report for May 27 shows the actual working force of The Panama Canal on that date to have been 26,250; of the Panama railroad, 4,771, and of the contractors, 29, a total effective working force of 31,050, a decrease of 644, as compared with the statement for April 29, and a decrease of 11,483, as compared with the force report for May 28, 1913. The gold force on the Canal work, composed almost exclusively of white Americans, was 4,366, divided, as follows: The Panama Canal, 3,901; Panama railroad, 448; contractors, 17, a decrease of 91, as compared with the statement for April, and of 436, as compared with May of last year. A statement of The Panama Canal force, by departments, follows:

DEPARTMENT OR DIVISION.	SILVER EMPLOYES*											Total silver.	Total gold.	Grand total.	
	Artisans.					European laborers.		West Indian laborers.							
	Monthly	44 cents.	32 cents.	25 cents.	20 cents.	16 cents.	20 cents.	16 cents.	20 cents.	16 cents.	13 cents.				10 cents.

(5) Includes Empire, Las Cascadas, and Bas Obispo. (6) Includes eight American negroes. (7) Includes Colon Beach and Colon Hospital. (8) Includes 18 East Indians, nine American citizens, and 272 Panamanians. (9) Includes 120 Coast Artillery men Gold force of contractors (included above), 44 bachelors.

Native Sons of the Golden West.

All native Californians that are employed on the Isthmus and belong to the order known

as the Native Sons of the Golden West are requested to send their names and the number of the parlor to which they belong, to E. C. Turner, Box 338, Cristobal, C. Z.

OFFICIAL CIRCULARS.

Work Formerly Under General Superintendent, General Construction Division.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., June 15, 1914.

CIRCULAR No. 660-15:

1. Effective June 16, 1914, the following disposition will be made of the work now under the supervision of Mr. George A. Greenslade, general superintendent, General Construction Division:

WATER AND AIR SERVICE.

2. Water and air service, with the exception of that in connection with the Balboa terminals, will be transferred to the Division of Municipal Engineering.

MIRAFLORES SAND SERVICE.

3. The Miraflores sand service will be turned over to the Division of Terminal Construction.

BALBOA DUMPS.

4. The work on the Balboa dumps will be continued under the supervision of General Foreman Thomas O'Brien, reporting direct to the Governor.

NAOS ISLAND BREAKWATER.

5. The work on the Naos Island breakwater will be continued under the supervision of General Foreman Will B. Casey, reporting direct to the Governor.

GEO. W. GOETHALS,

Governor.

Division of Posts.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., June 20, 1914.

CIRCULAR No. 660-16:

Effective July 1, 1914, the Division of Posts of the Executive Department will be abolished and the work heretofore handled in that division will be transferred to the Division of Civil Affairs.

The Chief of the Division of Civil Affairs will be, *ex officio*, Director of Posts.

GEO. W. GOETHALS,

Governor.

Sales of Materials.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., June 12, 1914.

CIRCULAR No. 630-2:

SURCHARGES.

Effective at once, the following surcharges will be added on material sold from regular stock of the Supply Department:

Fifteen per cent—To churches, lodges, and charitable organizations; detachments of the United States Army, Navy, or Marine Corps (including wireless stations) located on the Isthmus; and to sales which are payable from Canal Zone or U. S. M. C. A. funds.

Twenty per cent—To employees (when material is for personal use); naval vessels; steamship companies or their agents; other branches of the United States Government; contractors with the United States Government or Panama Railroad Company, when material is for use in connection with such contract; and to sale of stock material when purchased in connection with second-hand equipment or material.

Thirty per cent—To all other sales of stock material

GEO. W. GOETHALS,

Governor.

Departamentos Para Las Familias de los Empleados del Rol de Plata.

CANAL DE PANAMA,

OFICINA EJECUTIVA,

CULEBRA, C. Z., 1º de Abril, 1914.

CIRCULAR No. 628:

1. En los puntos donde se cobra alquiler, se destinarán departamentos para las familias de los empleados casados del rol de plata, y el alquiler será fijado y cobrado de acuerdo con las siguientes reglas y reglamentos:

2. Los cuarteles maestros de los distritos llevarán una lista metódica de los peticionarios cuyas peticiones serán archivadas a medida de su recibo. Las peticiones se harán sujetándose a las reglas generales que reglamentan la cesión de departamentos para las familias de los empleados del rol de plata.

3. Los departamentos no podrán ser subarrendados y serán ocupados únicamente por los empleados a quienes se entregarán y a la familia o parientes que dependan de dichos empleados.

4. Una vez ocupado el departamento, este y los terrenos adyacentes deberán conservarse aseados y en buenas condiciones sanitarias. Los empleados y sus familias estarán obligados a cumplir con todos los reglamentos de sanidad y a someterse a las reglas que rigen la ocupación de departamentos.

5. A los empleados que ocuparen un departamento al dejar su empleo, ya sea por destitución, ya sea por su

propia voluntad, les será permitido continuar en la hasta que concluya el período de alquiler pagado ya antes de su separación del empleo, debiendo al terminarse el alquiler desocupar el departamento.

6. Un arriendo mensual se cobrará por cada departamento. Los precios de arriendo y las fechas de estos serán fijados junto con una copia de los reglamentos sobre cada edificio para arrendar.

7. El período de arriendo principiará el día 16 del mes y terminará el día quince del mes siguiente. El arrendamiento deberá pagarse por adelantado al representante autorizado del "Panamá Canal," ó sea antes del primer día del período de arriendo mensual. Un recibo de dicho pago será entregado en debida forma, y deberá ser conservado como comprobante del derecho de tenencia. Estos recibos tendrán que ser presentados a petición del representante del "Panamá Canal."

8. En caso de que la ocupación principie en otra fecha que la del 16 del mes, un valor diario equivalente a una trigésima parte de la renta mensual se cobrará por cada día de ocupación del departamento, con la excepción siguiente: Por toda fracción de la mensualidad que principie después del 16 de Febrero el arriendo se calculará deduciendo del valor de la mensualidad una trigésima parte por cada día entre el 15 de Febrero y la fecha en que principiará la ocupación.

9. Al dejar el empleado de cumplir con las reglas y reglamentos arriba mencionados se le obligará a desocupar inmediatamente su departamento y no se le hará devolución alguna de dinero por los días de arriendo que faltaren por cumplir.

GEO. W. GOETHALS,
El Gobernador.

Accountable Officials.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., June 20, 1914.

CIRCULAR No. 62:

All concerned—Effective June 16, 1914, Mr. F. R. Blunt, superintendent of railroad transportation, is designated an accountable official of The Panama Canal, and as such, will account for all Panama Canal equipment in the service of the Panama railroad.

H. A. A. SMITH,
Auditor, Panama Canal.
Approved: GEO. W. GOETHALS,
Governor.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., June 15, 1914.

CIRCULAR No. 61:

All concerned—Effective this date, Mr. T. B. Möniche, engineer of docks, is designated as an accountable official of the Panama railroad.

H. A. A. SMITH,
Auditor, The Panama Canal.
Approved: GEO. W. GOETHALS,
Governor.

Assistant Engineer, Fortifications Division.
THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 22, 1914.

CIRCULAR No. 661-10:

Effective June 24, 1914, First Lieutenant A. H. Aeber, U. S. A., assistant engineer, will be placed in charge of the fortification work on the Isthmus, vice First Lieutenant Geo. R. Goethals, U. S. A.

GEO. W. GOETHALS,
Governor.

Energization of Transmission Line Between Miraflores and Balboa.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., June 22, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

In order to carry the additional relay pump load at Balboa, it is necessary to energize the west transmission line between Miraflores station and Balboa at 11,000 volts, effective July 1, 1914. All concerned are notified to use due caution to avoid coming in contact with the live wires.

GEO. W. GOETHALS,
Governor.

Shipments of Material and Claims for Losses.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., April 1, 1914.

CIRCULAR No. 632:

INSTRUCTIONS FOR CONSIGNORS.

1. All material loaded direct by consignor, in box or flat cars, must be properly stowed, staked, or fastened in a manner suitable to prevent damage to the shipment from the ordinary handling of the car in transit. Piling, or other material of sufficient length to require loading on two or more cars, must be loaded in accordance with master car builders' standard, and in no case must

the load extend to exceed five feet two inches from center of track. In moving pile-drivers, steamshovels, or other equipment, their width must conform to the above unless otherwise specifically authorized.

2. Shipments of glass shall be stowed on edge; sewer and water pipe securely staked to prevent motion; lumber, piling, and timber securely staked, and, when necessary, cross-staked to prevent motion in transit; part carloads must be secured against motion, and all reasonable precautions observed to insure shipments arriving at destination in good condition.

3. The chains used by the Panama railroad as auxiliary couplings between cars on which is loaded material that extends over the ends of the cars, such as piling, must be returned to the Panama railroad by the official or employee responsible for unloading such cars, or by the inspector removing chains from cars at the terminal.

4. Chains will be waybilled on separate billing (making notation on original waybill of number of chains) by forwarding agent to the consignee of shipments, with a charge of \$5. United States currency, for each chain used. Waybill must show, as reference, the initial and number of cars, waybill number, and date of shipment.

5. Receiving agent will make out regular expense bill in duplicate, delivering one copy to consignee and retaining one copy, on which he must obtain consignee's receipt for chain, which will be kept until chain is returned, if returned within 30 days. If chain is not returned within 30 days, the receipted expense bill will be sent to the auditor, taking credit for amount of charges on the same.

6. When chains are returned, agent will turn over to consignee original expense bill on which he has given receipt and forward chain on company's billing to receiving and forwarding agent, or to the local agent at Colon or Balboa, giving reference on waybill to original and chain waybill number and date, name of consignee, numbers of cars on which chains were used, advising the auditor what action has been taken, and taking credit for the value of the chains.

7. Chains used on cars loaded with freight in transit will be billed to receiving and forwarding agents, who will be responsible for return of the same.

8. Car inspectors will report promptly to forwarding agent all chains used on cars, giving car numbers, number of chains used, and lading of cars.

9. Any employee failing to obey these instructions will be held responsible for the value of the chains.

10. It will be considered negligence on the part of a shipper to forward on flat cars material which, following good railroad practice, should be loaded in box cars.

11. Small packages, articles of a valuable nature, material subject to damage from weather, loose articles, packages containing fragile material, packages containing liquids, and similar items, shall be loaded in box cars, except in cases of extreme emergency where there are no box cars available. Whenever shippers are unable to procure box cars for small packages, articles of a valuable nature, etc., they shall deliver the packages to the nearest agent and take his receipt therefor.

12. Any losses incurred through improper loading, as above outlined, shall be the basis of a proper claim against the shipper. In such cases, shipper must produce necessary evidence of his efforts to procure a box car.

13. Shipments shall be packed in a manner sufficient to insure goods arriving at destination in good condition. Articles of a fragile nature must be securely boxed, or crated, and other items boxed, crated, bundled, or sacked (according to the nature of the shipment), and each package properly marked showing shipper, destination, and consignee.

14. Box cars loaded by consignors shall be properly sealed, and cars so loaded must be carded showing shipper, destination, and consignee.

15. Consignors, shall forward an invoice to the consignee at unloading point in time to arrive at destination with the goods. This invoice shall contain particulars of the shipment and shall be used by the consignee for an unloading check. Agents, however, will check items, such as boxes, barrels, etc., as shown on the waybill. Shipment of bulky materials, such as rails, ties, lumber, piling, or other material of large size, should be carded, card being placed on car containing material, showing exact amount of material on car.

INSTRUCTIONS FOR CONSIGNEES.

16. It shall be the duty of the consignee, or his authorized representative, to unload and check all shipments promptly upon arrival, noting the condition of the seals, and any discrepancies in quantities or conditions.

17. It is hereby directed that all departments shall keep a record of all seals on cars, this record to show the following data:

- (a) Number and initial of car.
- (b) Number and initial of seals.
- (c) Date removed or applied.
- (d) By whom removed or applied.
- (e) Condition of end doors must be shown, whether cleated, bolted, or sealed.

(f) When loading carload lots, all old seals must be removed and new seals applied.

18. When cars are placed to be opened, the seals must be examined carefully to ascertain if they are in good order before removing them. All cases of seals being found broken or out of order must be reported promptly by telegraph to the superintendent of the Panama railroad and the consignor.

19. (a) In cases of damage being noted, the consignee shall have the damage verified by an agent of the Panama railroad. The consignee and the agent shall determine, if possible, whether the damage was occasioned through the fault of the railroad or from defective loading by the consignor.

(b) If consignee and agent agree as to responsibility, they will immediately fill out, sign, and forward Form AI 349 to the consignor, superintendent of Panama railroad, and surveying officer.

(c) If consignee and agent cannot agree as to responsibility, the matter will be referred to the surveying officer, but there shall be no delay to the car on which shipment is made.

20. In cases of shortages in expendable material not exceeding \$3 in value, the consignee will accomplish all papers pertaining thereto, including expense bill and receipts in full, and the accountable officer will drop the article or articles found short from his return, on certificate of the consignee that such articles were short and less than \$3 in value. In cases of shortage of nonexpendable material and articles of all classes exceeding \$3 in value, the consignee will call for the action of the surveying officer, and hold papers for his disposition.

21. In case the car is received with the original seals intact, it will be considered evidence that the short material was never shipped and shall be the basis of a claim against the shipper. In case the seals are not intact, the matter should at once be reported as per Paragraph 18. If the Panama railroad's seal record shows that car was delivered on a Panama Canal interchange track with seals intact, the Panama railroad shall not be held for any loss or damage. Written report in full shall be sent to the accountable officer of the department or division of the consignee, the superintendent of the Panama railroad, and the consignor, and no claim will be entertained unless inaugurated within 48 hours.

22. Material loaded by the consignor and accepted by the railroad at "Shipper's load and count" exempts the railroad from any loss by shortage, unless it can be proven that car was received with seals broken.

23. Any shortage developing when shipment is received with seals intact, when billed "Shipper's load and count," shall be borne by shipper, after verification of the shortage by the surveying officer.

24. Concealed damages, that is, damages that are not visible when packages are unloaded, but which are disclosed after the shipment has been unpacked, are to be treated as indicated in Paragraph 20.

25. Articles accepted by the railroad only at owner's risk are shipped with the distinct understanding that the railroad will not entertain any claim for damages or losses, except it can be proved that the car received rough handling in transit.

26. Shipments of glass, sewer and water pipe, liquids, and similar articles are handled only at owner's risk, and claims for damages from losses shall not be made against either the shipper or the railroad, except as hereinafter noted:

(a) Claims shall be made against the railroad when it can be proved that the car received rough handling.

(b) Claims shall be made against the shipper when it can be proved that the loss occurred through improper loading and packing.

(c) When a claim is to be presented against the Panama railroad, the claimant should refer to the Panama railroad freight expense bill, giving its pro number, name of station shipped from, name of station making delivery, date of way bill, number of way bill, car initials and number, as shown on the Panama railroad form AI 274 Rev., and seal record to which it refers.

GEO. W. GOETHALS,
Governor.

Oils, Lubricants, and Waste.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., April 1, 1914.

CIRCULAR No. 655:

STANDARD OILS AND LUBRICANTS.

1. The following list of illuminating oils, and lubricating oils and greases will be considered as standard for The Panama Canal, and will be used only for purposes indicated, excepting only as indicated in paragraph No. 8 of this order. All requisitions on the Supply Department shall specify the oil or lubricant desired, either by the "P. C." number given below or by name, or by both, and no name other than that given below for each particular oil or lubricant shall be used in designating the same on requisitions, etc. No oils or lubricants will be requisitioned for unless the same are included in the following list, until after application

for authority to procure the same, showing the necessity therefor, has been first submitted to, and approved by the Governor.

2. The metal drums in which most of the lubricating oils are furnished are the property of the oil contractors, and have to be returned to them in good condition. Care should, therefore, be exercised in their handling to prevent both damage and loss of oil, and in no case should they be used as a continuous container for the same or any other oils, but when empty should be returned promptly to the Supply Department.

3. The prices given below indicate the actual cost of all oils, and lubricants, delivered at Cristobal, under the present annual contract (cost of drums not included), and are not intended to supersede the prices given in the price book of the Supply Department, and should not be used in the material accounts.

4. *Lubricating oils—* Cost per gal.
P. C. No. Drums. Cans.

1. Valve oil.....\$0.25.....
For the internal lubrication of steam valves and cylinders on all classes of equipment.

2. Air compressor cylinder oil......20.....
For the internal lubrication of air cylinders of air compressors, and for pneumatic hammers and drills.

3. Marine engine oil......22.....
For marine engines, but not in crank cases, where it would be agitated and mixed with water, for being a compound oil, it would emulsify if so used; also, for the block bearings of suction dredges.

4. Stationary engine oil......17.....
For stationary engines, electric dynamos, and motors, wood and metal working machinery, and for the general lubrication of machinery; also, for dies of bolt cutters, turret lathes, etc., except where the use of lard oil is permitted. (See note under lubricant No. 11.)

5. Locomotive engine oil......15.....
For all locomotives, running gear of all locomotive cranes, deck machinery of dredges (except engines), and for cold saws in machine shops.

6. Turbine engine oil......13.....
For all step bearings of turbines in the Miraflores and Gatun power plants only. This oil is also known as step bearing oil.

7. Gas engine oil......20.....
For the cylinders of internal combustion engines. The use of Monogram engine oil is permitted on motor boats and motor cars only.

9. Car oil......13.....
For the journals of all cars, passenger coaches, locomotive tenders, and rolling stock generally; for steamshovel bearings where not equipped with grease cups, and for tripod drills and switches. Nylor car oil shall be standard lubricant for crank cases of Westinghouse vertical compound and other engines.

10. Transformer oil......28.....
For use in the electrical subdivision in air cooled transformers only.

11. Lard oil......6575.....
For hand torches for illuminating purposes only on marine equipment. On land, for shop use on pipe-threading machines; and it may be substituted for stationary engine oil (P. C. No. 4) when necessary, on dies and turret machines and on bolt cutters, when working refined iron or tough machinery steel. The use of this oil should be minimized to the greatest possible extent on account of its high cost.

12. Ammonia cylinder oil......35.....
For the internal lubrication of cylinders of ammonia compressors only.

13. Crude oil......0262.....
For the lubrication of steamshovel chains, cables where designated, and general purposes where oils and greases have been used as a preservative.

5. *Lubricating greases—* Cost per lb.
In bbls.

20. Nonliquid oil......045.....
This is an oil of the consistency of vaseline, for the lubrication of sheaves of carriages on the Lidgerwood cableways at Gatun, for air brake cylinders and triple valves, and such pneumatic drills and motors as may be equipped for the use of grease.

21. Cup grease (yellow)......065.....
For all classes of lubrication where grease is used in compression cups. This grease is being received in two consistencies, No. 3 and No. 5, the No. 3, of less consistency, to be used on machinery subject to normal temperature, and the No. 5, of heavier consistency, to be used on machinery subject to higher temperatures.

22. Gear grease......027.....
For all classes of lubrication requiring grease for which compression cups are not adapted. This includes the center and

side bearings of cars, cranes, and steamshovels, also wire cables, both standing and running, etc.

23. Cable grease......04.....
For the "Interlocked-wire" track cables of the Gatun cableways exclusively.

24. Crank pin grease......085.....
For use on locomotive crank pins only where pressure cups are used. Care should be exercised not to confound this grease with cup grease Nos. 3 and 5 (P. C. No. 21), which is not suitable for this purpose.

6. *Illuminating oils—* Cost per gal.
Drums. Cans.

30. Signal oil......44.....
For use in railroad lanterns only, and in the cab lights of engines.

31. Kerosene oil......102 .169.....
For use in locomotive headlights, passenger coach, and similar lamps, ordinary lanterns, and for cleaning purposes.

7. *Gasoline—* Cost per gal.
Drums. Cans.

40. Gasoline......254 .318.....
For use on gasoline launches, motor cars, blow torches, cleaning, etc.

8. Substitutions of cheaper grades of the standard lubricants given above, may be approved by the traveling engineer whenever practicable, the above circular defining in a general way their accepted uses.

STANDARD CONTAINERS.

9. Hereafter, the following hand oilers and oil containers only shall be used, and shall be considered as the P. C. standard. Any other hand oilers or oil containers that may be in stock, however, may be used until the supply is exhausted. All replenishment of the same shall be in accordance with the following list:

No. 40. Twenty-four-inch spring hand oiler, for use on standard gage locomotives only, capacity, two pints.

No. 41. Locomotive tallow pot, for use on locomotives, steamshovels, pumps, portable, and stationary plants, and at power plants for filling lubricators, etc., capacity, two quarts.

No. 42. Stationary engine oilers, for general use around stationary power plants on air compressors and marine engines, etc., capacity, two pints.

No. 43. Standard squirt oiler (length of nozzle 4-7/8 feet, diameter 4-3/32 inches), for use on floating equipment, on portable and stationary plants, and on machinery in general, capacity, one pint.

No. 44. Oil can with screw cover and spout, for use on locomotives and small equipment, capacity, one gallon.

No. 45. Oil can with screw cover and spout, for use on locomotives and small equipment where 1-gallon can is not suitable, capacity, two gallons.

No. 46. Oil can with screw cover, for use on steamshovels and floating equipment, capacity, five gallons.

No. 47. Eighteen-inch spring hand oiler (same as type No. 40), for use on dredges, cranes, cableways, steamshovels, narrow-gage locomotives, and smaller equipment, capacity, two pints.

10. All hand oilers and oil containers shall be plainly marked with the standard number given in the above list and with the name of the oil contained. They shall be kept clean and in good repair.

11. Requisitions for the above will be honored by storekeepers only for the purpose indicated, and they may be specified on requisition either by number or by name.

CARE AND USE OF LUBRICANTS, LUBRICATORS, AND EQUIPMENT.

12. The following instructions in regard to the care and use of lubricants, lubricators, and equipment, are issued for the guidance of all concerned:

(a) *No. 1. Valve oil—*For the internal lubrication of steam valves and cylinders on all classes of equipment.

A. The points that govern the condition of valve and cylinder lubrication are: The condition of the surfaces, the steam pressure, the amount of moisture in the steam, speed, type of engine, weight and fit of moving parts. Dryness of the steam is a very important factor in cylinder and valve lubrication, engines taking steam from foaming of priming boilers, or through long and uncovered steam pipes, usually require more oil than an engine supplied with dry steam. Wet steam is considered one of the greatest causes for complaint in the lubrication of valves and cylinders.

B. The engineer who is studying the subject of valve and cylinder lubrication, can determine accurately the amount of oil required to sufficiently lubricate the particular equipment under his charge, by the following method: For instance, an engineer wishes to determine, as near as possible, the number of drops to feed per minute to obtain satisfactory lubrication; he will feed, say, six drops per minute, and finding that the valves work free and smooth, the number of drops will be reduced to, say, four drops per minute. After feeding four drops per minute for some time, and finding that the conditions are the same as when feeding six drops per minute, with reference to the eccentric rods develop-

ing quiver, and the groaning of the valves (which is an indication of insufficient lubrication), it could then be safely assumed that six drops per minute would be excessive lubrication. Further experiments could be conducted along this line to accurately determine the exact drops per minute to feed to obtain satisfactory lubrication.

C. A very reliable and simple test to determine the lubrication of the valves and cylinders is, to wipe them over with several thicknesses of tissue paper, and note the number of thicknesses that has been saturated by the oil; the greater number of sheets showing evidences of oil would determine the amount of oil on the surfaces.

D. Intelligent and economical results cannot be obtained unless the engineer in charge knows the rate at which the oil is being fed through the lubricator.

E. If a small quantity of valve oil is placed in the lubricator, it should either be filled up with warm water, or sufficient time be allowed for the condensation to fill the cup and raise the oil to the top of feed pipes before the feed valves are opened.

F. Immediately after the oil is placed in lubricator, the steam and condenser valves should be opened, the steam valve should always be opened first and full, and should be shut last. By bearing this particularly in mind, it will be found that most of the trouble will disappear, the water in the feed glasses will remain clear, and there will be no loss of oil by syphoning. If the feed glasses become dirty, they may be cleaned by rubbing a swab, saturated with either turpentine, glycerine, or kerosene. In doing this, always use a wooden stick. A very common cause of trouble is the clogging up of feed glasses, caused by waste or foreign matter getting into the feed passages. This may, in part, be prevented by the proper care being given to oiling equipment and supply cans; also, in the filling of the lubricator, to see that dirt or waste is not allowed to enter.

G. All unions, valve stem, and screw joints should be perfectly tight, as a slight leak may affect the proper working of the lubricator.

(b) *No. 2. Air compressor oil (cylinder)—*For the internal lubrication of air cylinders of all compressors, and for pneumatic hammers and drills.

A. In the lubrication of the interior of air compressor cylinders, conditions are different than in the lubrication of steam cylinders on account of the heat being a dry heat, while in the steam cylinder, moisture is always present to a more or less degree, and this moisture has a tendency to wash the oil off the surfaces, while in the case of air compressor cylinders, the heat is dry, and the oil adheres to the surfaces better and longer, so that so large a quantity of oil is not necessary to keep the surfaces lubricated.

(c) *No. 3. Marine engine oil—*For use in marine engines, but not in crank cases, where it would be agitated and mixed with water, as, being a compounded oil, it would emulsify if so used; also, for the block bearings of suction dredges.

A. This oil is used for heavy work, and will retain its viscosity, or body, longer, under high temperatures than other oils for external uses, and should be confined to the use of the equipment only. This oil should be filtered and reused whenever possible to do so.

(d) *No. 4. Stationary engine oil—*For use on stationary engines, electric dynamos, and motors, wood and metal working machinery, and for the general lubrication of machinery; also, for dies of bolt cutters, turret machinery, etc., except where the use of lard oil is permitted. This oil is also used as dynamo oil on the Isthmus. This oil is especially adapted for external lubrication of stationary engines, and it is of such a quality that it will permit of being filtered and reused, which should be done wherever possible.

(e) *No. 5. Locomotive engine oil—*For all locomotives, running gears of all locomotive cranes, deck machinery of dredges (except engines), and for cold saws in machine shops.

The general use of this oil is confined to locomotives, the journals of which are lubricated by sponging in the cellars, and a small quantity is received from the top of the driving box. As the wear of these parts, and the jar received from the roadbed tends to create space between the journals, and the sponging in cellars (wool waste), it requires frequent inspection and loosening up or replenishing of the sponging to avoid hot journals. The cavity in the top of the box should be filled with cotton waste, this waste acting as a container for oil, which feeds gradually through the oil holes in the top of the box. The sponging in oil cups on eccentric straps and rocker boxes should be loosened up frequently, so as to prevent its becoming clogged with dirt. When oiling, do not overfill oil holes or oil cups, as it does no good and is wasteful and expensive. When oiling the bottom guides, it should be poured crosswise, so as to permit the crosshead to distribute it over the entire surface. When guide or piston rod cups are equipped with adjustable thumb feeds, they should be closed when the engine is not in use. This would also include the noon hour.

(f) *No. 7. Gas engine oil—*For the lubrication of internal combustion engines. In the lubrication of gas

engines, the cylinders do not require as much oil as steam engines of the same size, on account of their being subjected to a dry heat. Too much lubrication in the cylinders will cause carbon to be formed, resulting in the igniting apparatus becoming fouled; also, undue amounts of carbon in the cylinders becoming heated will cause premature explosions of gases.

(g) *No. 9. Car oil*—For the journals of all cars, coaches, locomotive tenders, and rolling stock generally; for steamshovel bearings, where not equipped with grease cups; for tripod drills, and switches. In the lubrication of the journals of all cars, coaches, locomotive tenders, and rolling stock generally, the conditions met with are entirely different with reference to other methods of lubrication. The journals of this class of equipment receive their lubrication from oil-soaked waste, placed in journal box underneath, and about half way up the journal, the oil feeding through the waste, by capillary attraction, to the journal. The preparing of this waste is of great importance, both for the successful and economical lubrication of this class of equipment. In preparation, wool waste should be soaked in clean oil at least 24 hours, and then placed upon a screen for 12 hours, allowing the surplus oil to drain off; after this, it may be placed in the journal box for lubrication, as follows: In the correct packing of journal boxes, all of the old waste should be removed and the journal examined, care being exercised to see that no dirt or foreign matter remains in the box. In the packing of the box, take a large wad of saturated packing or waste, twist it up, and squeeze out all the surplus oil until there is a long roll of packing, sufficient to reach two-thirds ($\frac{2}{3}$) of the way around the journal, shove this back to the rear end of the journal box, and let it come up around to form a dust guard in the rear. This packing is not intended to lubricate the journal, but to form a dust guard, preventing dirt from getting into the journal. Then take a piece of packing that has been thoroughly loosened or shaken out, and put it in the box under the journal, bringing it up around the sides, not higher than the center line of the journal. As many pieces of this packing should be put as are necessary to fill the space between the collars of the journal, and care should be taken to get this packing so that the space is entirely filled, and yet it should not be put in so tight as to squeeze the oil out of it. Space between the outside collar and the opening of the journal box should be filled with one large piece of packing, which acts as a wedge to prevent the packing from working out from under the journal. Care should be exercised where new brasses are placed in cars, to see that the waste does not settle away from journal, on account of the slight wear that occurs on new brass. Where waste that is removed from journal boxes is to be used over again, it should be thoroughly shaken out and worked, and, if found too dry, should be reoiled for future use.

(h) *No. 21. Cup grease (yellow)*—For all classes of lubrication where grease is used in compression cups. This grease is used in two (2) consistencies, Nos. 3 and 5. The No. 3, of the lesser consistency, to be used on machinery subject to normal temperatures; the No. 5, of the heavy consistency, to be used on machinery subject to higher temperature.

A. The use of this lubricant is confined to pressure cups, in the use of which, care should be taken to not compress the grease so as to force it out of the bearings, thereby causing waste. Frequent attention, with a slight compression of the grease, will give better and more economical results than heavier compression at long intervals. This grease should not be confounded with crank pin grease, as it is not suitable for this purpose. Crank pin grease is restricted to use on certain locomotives.

B. Points that govern all classes of lubrication are, the pressure, speed, temperature, composition, and condition of the moving parts. In addition to the above, dry steam is an important factor in the lubrication of steam valves and cylinders, and should receive careful attention.

C. Points to be recognized in effecting economy in the use of all oils and lubricants, are careful oiling. Do not overfill oil holes or cups, as it is wasteful and does no good, and when guides with oil cans, place the oil crosswise on guides, so as to permit the crosshead to distribute the oil over the entire surface.

(i) *Reclaiming of oil and filtering*—Drip cans should be placed wherever necessary for the purpose of reclaiming the oil, and all oils so collected to be filtered for further use.

(j) *Care and cleanliness of the oiling system and tanks*—Oiling systems and tanks should not be allowed to become dirty or clogged up, and care should be taken in the use of waste around these parts, and all joints should be kept tight and well packed.

(k) *Containers and oiling equipment*—These should be kept clean and in good order with reference to leaks, and the keeping of all tops on supply cans to prevent dirt from accumulating.

A. Special care should be taken to see that all oils are removed from the 50-gallon drums, and, wherever

possible, these drums should be set in a warm place to drain.

B. While economy is desired in the use of all lubricants, it should be remembered that the proper care of the machine or equipment should be the first consideration.

C. In the use of cotton waste, considerable saving can be effected by its conservative and intelligent use, and the more attention given to cleanliness with regard to oils will also effect a noticeable saving in the above.

STANDARD ALLOWANCES.

ROLLING EQUIPMENT.

13. The following rules will govern the lubrication of all locomotives, steamshovels, unloaders, spreaders, trackshifters, cranes, and piledrivers of The Panama Canal. No lubricants will be issued or used for the different equipment, except as listed below. The regular allowance given covers a working day of eight hours.

14. Locomotives—

(a) Valve oil—

Narrow gage engines, per day, one pint.
All other engines per day, one and one-half pints.

(b) Engine oil—

French narrow gage and small American engines, per day, two pints.
Large American engines, per day, three pints.
Headlight oil, per month, one gallon.

(c) Cup grease—

Narrow gage engines, per month, four pounds.
Waste, per day, one-half pound.

(d) Each engine will be furnished with one 2-gallon can marked for and containing one gallon of valve oil, and with one 2-gallon can marked for and containing one gallon of engine oil. This oil will be considered emergency oil and will be used only in case of necessity.

(f) Engineers will be expected to exercise economy in the use of oil, and if any saving can be made in the regular allowance, the oil remaining should be put into the emergency cans.

(g) Any headlight oil in addition to the regular allowance, required on account of night work, may be issued on ticket signed by the engineer, stating reason for which oil is required. Engines equipped with electric headlights will be issued the necessary amount of dynamo oil in 1-gallon cans, and the engines will be equipped, in addition, with a 1-pint oiler.

(h) White lead, graphite, tallow, and soap may be issued in small quantities, when required, only on requisition approved by the traveling engineer.

15. Steamshovels—

Valve oil, per day, one gallon.
Car oil, per day (to be used for lubrication of bearings), three quarts.
Crude oil, per day (to be used for lubrication of chains), two gallons.

Kerosene, per day, one-half gallon.
Cup grease, per day, two pounds.
Gear grease, per day, one pound.
Graphite, every six months, 5-pound can.
Cotton waste, every day, one and one-half pounds.

(a) Steamshovel engineers will be expected to effect as much economy as practicable in the use of lubricants and make any saving possible. If the work requires the use of oil in excess of the regular allowance, an explanation will be required. The allowance is based on the requirements of the 70 and 95-ton steamshovels in the old Central Division, and of shovels working under similar conditions and making an equivalent output. A material reduction in consumption of lubricants will be expected for smaller shovels, and for larger shovels under other conditions.

16. Lidgetwood unloaders—

Valve oil, per day, one quart.
Engine oil, per day, one quart.
Kerosene, per month, one gallon.
Gear grease, per month, 25 pounds.
Cotton waste, per month, 15 pounds.

17. Spreaders—

Car oil, per month, five gallons.
Gear grease, per month, 15 pounds.
Cotton waste, per month, six pounds.

(a) The above allowance is based on the requirements of the large Mann-McMann spreaders. The consumption for other spreaders should be in proper ratio.

18. Trackshifters—

Valve oil, per month, two and one-half gallons.
Engine oil, per month, two and one-half gallons.
Kerosene, per month, one gallon.
Gear grease, per month, 10 pounds.
Cotton waste, per month, 10 pounds.

19. Locomotive cranes (25 tons and under)—

Valve oil, per month, five gallons.
Engine oil, per month, seven and one-half gallons.
Kerosene, per month, two and one-half gallons.
Cup grease, per month, 10 pounds.
Cotton waste, per month, 20 pounds.

20. Locomotive cranes (75 and 100 tons)—

Valve oil, per month, three and one-half gallons.
Engine oil, per month, two and one-half gallons.

Kerosene, per month, 50 gallons.
Cup grease, per month, five pounds.
Car oil, per month, five gallons.
Cotton waste, per month, 25 pounds.

21. Piledrivers (Bay City)—

Valve oil, per month, five gallons.
Engine oil, per month, five gallons.
Kerosene, per month, five gallons.
Cup grease, per month, 10 pounds.
Cotton waste, per month, 25 pounds.

22. Piledrivers (Moonbeam)—

Valve oil, per month, two and one-half gallons.
Engine oil, per month, two gallons.
Kerosene, per month, one gallon.
Gear grease, per month, five pounds.
Cotton waste, per month, 10 pounds.

EQUIPMENT.

23. Each steamshovel shall be furnished with the following:

Two 5-gallon oil containers for valve and car oil.
One 1-gallon oil container for kerosene.
Two 24-inch spring hand oilers of standard locomotive size.

One standard size locomotive tallow pot.
One 2-gallon galvanized bucket.
One long handled chain brush.

(a) Oilers and oil containers furnished other equipment shall be standardized in the same manner.

MARINE EQUIPMENT.

24. The following rules will govern the lubrication of marine equipment designated below. No lubricants will be issued or used on such equipment, except as listed hereinafter. The allowances given are monthly allowances, unless otherwise stated, and are based on the maximum requirements of the largest vessels in the classes shown when operated continuously. A corresponding reduction in the consumption of lubricants will be expected on the smaller vessels of a class, and when vessels are not at work the entire month:

25. SEAGOING SUCTION DREDGES.

Marine engine oil, per month, 375 gallons.
Locomotive engine oil, per month, 50 gallons.
Stationary engine oil, per month, 100 gallons.
Valve oil, per month, 20 gallons.
Kerosene oil, per month, 100 gallons.
Lard oil (see Note 2 below), per month, five gallons.
Ammonia oil (see Note 1 below).
Yellow lubricating grease, per month, 100 pounds.
Gear grease, per month, 200 pounds.
Graphite, per month, five pounds.
Cotton waste, per month, 350 pounds.

26. LOADER AND DIPPER DREDGES.

Marine engine oil, per month, 60 gallons.
Locomotive engine oil, per month, 20 gallons.
Stationary engine oil, per month, 25 gallons.
Valve oil for ladder dredges, per month, five gallons.
Valve oil for dipper dredges, per month, 20 gallons.
Kerosene oil, per month, 75 gallons.
Lard oil (see Note 2 below), per month, five gallons.
Yellow lubricating grease, per month, 50 pounds.
Gear grease, per month, 125 pounds.
Graphite, every three months, five pounds.
Waste, cotton, per month, 100 pounds.

27. SUCTION PIPELINE DREDGES.

Locomotive engine oil, per month, 50 gallons.
Stationary engine oil, per month, 50 gallons.
Valve oil, per month, 20 gallons.
Kerosene oil, per month, 75 gallons.
Lard oil (see Note 2 below), per month, two and one-half gallons.

Yellow lubricating grease, per month, 50 pounds.
Gear grease, per month, 50 pounds.
Graphite, per month, five pounds.
Waste, cotton, per month, 100 pounds.

28. TUGS.

Marine engine oil, per month, 100 gallons.
Stationary engine oil, per month, 15 gallons.
Valve oil, per month, 15 gallons.
Kerosene oil, per month, 25 gallons.
Lard oil (see Note 2 below), per month, two and one-half gallons.

Yellow lubricating grease, per month, 25 pounds.
Graphite, every three months, five pounds.
Waste, cotton, per month, 100 pounds.

29. CLAPETS.

Marine engine oil, per month, 30 gallons.
Locomotive engine oil, per month, five gallons.
Stationary engine oil, per month, five gallons.
Valve oil, per month, five gallons.
Kerosene oil (when equipped with dynamo), per month 15 gallons.

Kerosene oil (when not equipped with dynamo), per month, 60 gallons.
Lard oil (see Note 2 below), per month, two and one gallons.

Fish oil (see Note 1 below).
Yellow lubricating grease, per month, 25 pounds.
Graphite, every three months, 5-pound tin.

Waste, cotton, per month, 75 pounds.

30. STEAM LAUNCHES.
Marine engine oil, per month, 20 gallons.
Valve oil, per month, five gallons.
Kerosene oil, per month, 15 gallons.
Waste, cotton, per month, 20 pounds.

NOTE 1. The quantity of ammonia cylinder oil used in refrigerating machinery on vessels is so small that no specific allowance of the same has been made; it may be obtained upon requisition in the usual manner from the Supply Department, as required. This also applies to fish oil.

NOTE 2. Lard oil shall be used for hand lamps only.

Motor boats, rock breakers and drill boats, being considered special equipment and working under widely different conditions, no specific allowance for them has been made. No other than the foregoing standard lubricants, however, shall be used on them.

31. Colored waste is to be standard for all general purposes; the use of white waste will be confined to such special purposes as motor cars, filters, etc., for which colored waste is not suitable.

32. The Supply Department will arrange to carry a suitable amount of the oils, lubricants, and waste listed above at the proper storehouses. The different divisions interested will arrange for the issue of same to engineers on their requisitions. In case engineers make requisition for a greater amount than shown on this schedule covering the periods given, an explanation will be required.

33. Lubricant request (Form C. E. 303) must be used by engineers or other employees in charge of equipment when ordering lubricants. The form will be placed on file at the supply station where it is filled. At the end of the month, they will be used in compiling report on forms C. E. 273-a and 273-b, of oils and lubricants consumed on each item of equipment.

34. A copy of this circular shall be posted prominently in each storehouse issuing oils and aboard each vessel.

GEO. W. GOETHALS,
Governor.

Panama Railroad Transportation.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., April 1, 1914.

CIRCULAR No. 608:

1. The following forms of transportation on the Panama railroad will be issued:

- Annual and periodical complimentary card passes.
- Complimentary trip passes.
- 120-trip tickets.
- Official business trip tickets.
- Employees' 24-trip tickets.
- School passes.
- Half rate mileage books.

2. Rules and regulations governing the issuance of transportation on the Panama railroad:

(a) Annual and periodical complimentary card passes will be issued to such officials of The Panama Canal and others as may be designated by the Governor.

(b) Complimentary trip passes will be issued by the Executive Secretary in such special cases as he may deem advisable, and by the district quartermasters at Cristobal and Balboa to the families of employees arriving on the Isthmus.

(c) 120-trip tickets (first and second-class) will be issued by the Governor's office, upon regular application through head of department or division, to employees who average at least three trips per week on official business, and in such other cases as may be directed by the Governor. This form of transportation will not be validated for use on Sundays and holidays, except in cases when the employee is compelled to travel regularly on those days on official business.

(d) Official business trip tickets (first and second-class), will be issued for the following purposes: To employees traveling on official business, to be issued by all departments; to employees traveling as patients to and from Canal hospitals, to be issued by the Health Department; one first-class round trip per month to each employee on the gold roll acting as volunteer fireman, who has attended at least one fire drill during the preceding month, to be issued by the Executive Secretary; one first-class single trip ticket from residence on the Isthmus to port of embarkation to an employee on the gold roll upon termination of service, to be issued by department in which employed; an employee's family may also be included on last mentioned ticket; one first-class single trip ticket to each new appointee on arrival from the United States, to point of destination, on the Isthmus, when identified as such by appointment papers, to be issued by the district quartermaster at Cristobal and Balboa; one single trip ticket to an employee's family returning from leave of absence; one single trip ticket to an employee when transferred from one station to another, to be issued by department in which employed (in such cases, free transportation for employee's family will be furnished by the local district quartermasters). Tickets must not be made

good for a longer period than sufficient to cover the requirements in each case. The nature of the business upon which employee is traveling must appear on every ticket issued. Stopover privilege is allowed on this form of transportation.

(e) Employees' 24-trip tickets (one book containing 24 single trip coupons) will be issued on the first of January of each year by the Governor's office to each employee on the gold roll and citizens of the United States on the silver roll. This transportation is furnished the employee gratuitously for his personal use and covers his monthly allowance of transportation for the year in which issued. Lost books should be reported immediately to the office of the Governor and bulletin will be issued. No stopover privilege is allowed on this form of transportation. On termination of service, tickets must be surrendered before issuance of time voucher.

(f) School passes will be issued by the Executive Secretary to the children of employees attending school at points other than their residence.

(g) Employees' half rate first-class mileage books—Five and 10-dollar first-class mileage books (200 miles, \$5, and 400 miles, \$10) will be sold to all employees on the gold roll and citizens of the United States on the silver roll, for the personal use of themselves and (a) relatives residing with them on the Isthmus who are not engaged in independent business; (b) relatives visiting the Isthmus, whether residing with the employee or not; (c) servants, when accompanying the employee or a member of his family. An employee desiring to purchase a mileage book must fill out in duplicate a form provided for that purpose and forward the same direct to the chief clerk, office of the Governor. After being checked and validated, one copy of the request will be returned to the employee and will be his authority to purchase a mileage book upon presentation to the local station agent of the Panama Railroad Company. In order that the issue of books may not interfere with the sale of other tickets, the station agent may, at his discretion, refuse to sell mileage books within 15 minutes prior to the departure of trains. Blank forms for requesting mileage books will be distributed to the various department and division offices, so that they may be easily obtainable by any employee desiring them. Unused mileage remaining in a book upon which the time limit has expired, or upon termination of service, will be redeemed upon presentation to the Accounting Department.

BAGGAGE ALLOWANCE.

3. All first-class transportation issued by The Panama Canal carries a baggage allowance of 250 pounds per adult passenger. There is no baggage allowance on second-class transportation unless indorsed "Good with baggage," and in such cases the allowance is limited to 150 pounds.

GEO. W. GOETHALS,
Governor.

Operation of Hydroelectric Station.

CULEBRA, C. Z., June 18, 1914.

To all concerned—Effective June 18, the Division of Erection will be relieved and the Electrical Division will take charge of the operation of the hydroelectric station.

H. F. HOGGES,
Engineer of Maintenance.

Change on Form P. C. 171-2.

THE PANAMA CANAL,
OFFICE OF EXECUTIVE SECRETARY,
CULEBRA, C. Z., June 22, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

On "Termination of service blank for employees on the gold roll" (P. C. 171-2) in the note on "Workmanship" and conduct ratings, is the sentence:

The rating "Good" indicates "Fairly satisfactory service."

The use of "Fairly" in this connection has been construed as diminishing the strength of "Good." This is not the intention. Circular No. 604, Paragraph 7, Section "d" gives the definition of the rating "Good" as when workmanship and conduct are average.

In order that there may be no misapprehension on this point, you are directed to have the word "Fairly" on form P. C. 171-2 inked out.

By direction of the Governor.

C. A. MCILVAINE,
Executive Secretary.

Major Wildman Detailed for Duty in the Canal Zone.

WAR DEPARTMENT,
WASHINGTON, June 5, 1914.

SPECIAL ORDERS
No. 131

(Extract.)

36. Maj. Leonard D. Wildman, Signal Corps, now on temporary duty at El Paso, Tex., is relieved from further duty at Fort Leavenworth, Kan., and will proceed from El Paso to this city for consultation with the Chief Signal Officer, and upon the completion thereof will proceed to the Canal Zone and report in person to

the Governor of The Panama Canal for duty pertaining to the preparation of estimates of signal corps material for fire control installation for the Canal defenses in Balboa and Cristobal. The travel is necessary in the military service.

(2171483 A. G. O.)

By order of the Secretary of War,

W. W. WOTHERSPOON,
Major General, Chief of Staff.

GEO. ANDREWS,
The Adjutant General.

Manual Block Signal at Corozal Station.

PANAMA RAILROAD COMPANY,
PANAMA, R. P., June 17, 1914.

TRANSPORTATION BULLETIN No. 6:

To all concerned—A manual block signal will be erected at the Corozal station and the operators transferred to this point. The interlocking plant at Corozal cabin will be disconnected, blades and lamps removed from the home and dwarf signals, and the plant placed out of service at 12 noon, on Sunday, June 21.

F. R. BLUNT,
Superintendent of Transportation.

Conductors' Instructions to Flagmen.

PANAMA RAILROAD COMPANY,
PANAMA, R. P., June 17, 1914.

TRANSPORTATION BULLETIN No. 7:

To all concerned—It has come to my notice that conductors are not always furnishing their flagmen with proper instructions when sending them back to flag, especially on work trains, or in case of track difficulties and other unusual occurrences. Effective at once, whenever work train conductors send their flagmen back, they will give them written instructions which can be shown to any train, engine, or motor car which may be flagged. In case of track difficulties or other unusual occurrences, conductors will give their flagmen written instructions which they must instruct flagmen to show to all trains, engines, or motor cars held up.

F. R. BLUNT,
Superintendent of Transportation.

Work Performed on Panama Canal Tracks.

PANAMA RAILROAD COMPANY,
OFFICE OF THE ROADMASTER,
COLON, R. P., June 19, 1914.

CIRCULAR No. 137:

To all foremen—Whenever you perform any work on Panama Canal tracks, you will send me a daily report showing the number of hours worked at the different rates, and statement of material used.

M. B. CONNOLLY,
Roadmaster.

Examinations by Board of Local Inspectors.

ANCON, C. Z., June 20, 1914.

The Board of Local Inspectors will conduct examinations at the Administration Building, Ancon, on Wednesday, July 1, 1914, beginning promptly at 2 p. m., for persons desiring the following classes of licenses: Pilots, masters, mates, marine engineers, chauffeurs, and navigators of motor boats. All applicants for license must procure from the office of the board, Ancon, forms of applications and information respecting the filling out of same, not later than the day previous to the examination. In addition, all persons desiring chauffeurs' licenses must provide themselves with automobiles with which to demonstrate their ability properly to operate the same.

NOTE.—The demonstration test for applicants for chauffeurs' licenses will be given on Tuesday, the day preceding the day of examination, at 2 p. m., at the Administration Building, Ancon; on Wednesday, the day of the regular examination, for out of town applicants, at 2 p. m., at the Administration Building, Ancon. No demonstration tests will be given at Cristobal, except by appointment.

By direction of the chairman of the board.

W. H. HYDE,
Clerk to the Board.

Applicants for Family Quarters on May 31.

DISTRICT.	List No. 1.	List No. 2.
Ancon.....	89 (75)	457 (197)
Ancon Hospital.....	9	25

Cristobal.....	1	138 (35)
Total.....	119 (100)	1,105 (402)

NOTE.—The figures in parentheses show the number of applicants already occupying regular or nonhouse-keeping family quarters at stations other than those at which applications are filed.

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

GENERAL.

The total membership on May 31 was 1,519. Eight thousand five hundred and seventy three games were rolled on the bowling alleys, 21,514 games of pool and billiards were played, 175 men were enrolled in gymnasium work, 45 men were members of chess and checker clubs, 63 entertainments were held, with a total attendance of 11,991, and 1,275 books were drawn from the library.

The moving picture schedule for the week June 29 to July 4 is, as follows: Monday, Culebra; Tuesday, Empire and Balboa; Wednesday, Corozal; Thursday, Pedro Miguel; Friday, Cristobal; Saturday, Gatun.

BALBOA.

S. T. Smith is leading in the handicap pool tournament with eight games won and one lost. J. Dubendorf is second, having won seven and lost one, and J. O'Rourke, third, with eight won and two lost.

As soon as the first 10 lessons in the Spanish class are finished, a beginners' class will be started for the benefit of those who did not have a chance to start with the first class. Information and rates can be procured from the secretary.

A rack for the phonograph records has been installed in the lobby; also, a hat rack.

A checker tournament will be started soon. All those interested are requested to hand their names in at the desk.

The private pool cue rack just installed is for the benefit of members who wish to have a private cue. Racks are rented at the rate of 25 cents per month.

PEDRO MIGUEL.

About 50 new books of the latest fiction have been added to the library.

In the boys' duckpin tournament just ended Richard Roberts won first place, with Pfisterer in second place. Fourteen boys were entered in the tournament.

Ladies' night was observed in the bowling alleys on Tuesday, June 16. The best score was made by Mrs. Landers and Mr. Davis, with a total of 532 pins.

Mr. C. B. Russell, secretary of the local clubhouse, returned from his vacation on Sunday, June 21.

The following names have been entered for a handicap pool tournament: Ludlum, Smith, Eggleston, Murray, Campbell, Turner, Dennis, Kent, Wieben, and Abramson.

CULEBRA.

High scores in bowling for the past week were, as follows: *Tenpins*—Warner, Sr., 202; Moore, 222. *Duckpins*—Mrs. Cook, 102; Ewing, 106.

It is requested that the games remaining in the handicap tenpin tournament be rolled off as soon as possible.

The Y. M. C. A. checker club is desirous of arranging a match with any other club or combination of checker clubs at the other clubhouses.

GATUN.

Instruction on the piano is given at the clubhouse every Tuesday and Friday of each week, and violin instruction on Fridays. New pupils may be taken on at any time.

The baseball game between Cristobal and Gatun held on Saturday evening, June 20, was won by the Gatun team; score, 14 to 8. The captains were McSparren for Cristobal; Thompson for Gatun. The referees were Peters and Rothgeb.

A band concert by the Tenth Infantry band will be given in front of the clubhouse on Friday evening, June 26, at 7.30 o'clock.

The Victrola, formerly at the Empire clubhouse, has been transferred to the Gatun clubhouse.

Since the arrival of Companies A and C of the Tenth Infantry the clubhouse has been filled every evening.

The first basketball practice of the season was held on Thursday evening, June 18. A number of the old-timers were out. Joseph Mitchell is acting as coach of the team.

Indoor baseball is becoming one of the most popular activities of the association.

A large number of members have already entered the 2-man ragtime tenpin tournament, and some creditable scores are being made. Chandler and Humphreys lead with 1,070.

Sales and Wright gave special drum and piano music at the motion picture entertainment on Tuesday, June 16.

CRISTOBAL.

Baseball interest has been keen all of the week. The "Doves" defeated the "Giants" on June 16, 23 to 8. On Wednesday night, June 17, Cristobal defeated Gatun 18 to 8. The battery work of Roberts and McSparren was especially good in this game. On Friday night, June 19, the "White Sox" defeated the "Giants" 12 to 11.

Dr. S. T. Darling of Ancon entertained a good-sized

audience with a talk on Africa at the meeting of the discussion club on Thursday night, June 18. He stated that the purpose of the trip was to make an investigation, at the invitation of the Johannesburg Chamber of Mines, of the cause of the diseases that were doing so much damage to the natives in the gold mines on the Rand. The doctor also gave a description of the diamond mines at Kimberly.

Interest is maintained in the local duckpin tournament. The "Senators" are in the lead, with 17 games won and 10 lost.

A local ragtime tournament will be held on Wednesday, July 1. All men interested in bowling are invited to participate. Refreshments will be served.

Corozal has issued a challenge, which has been accepted, for a series of five bowling matches. The first series of games will be rolled at Cristobal on Saturday, June 27.

The high duckpin scores for the week were: Gill, 109; C. Cotton, 108; Smith, 104; Claherty, 102.

Culebra will play volleyball at Cristobal on Saturday, June 27.

Rainfall, June 1 to June 20, 1914, Inclusive.

LOST—On the morning of Wednesday, June 17, on the Empire-Balboa labor train, an open face gold watch with silver fob, with the name of F. P. Obee engraved on the back. Reward for its return to F. P. Obee, Paraiso, C. Z.

COMMISSARY DEPARTMENT.

Commissary Operations In May.

The Chief Quartermaster's report for May on the operation of the commissaries is, as follows:

"The new organization of the commissary division was practically put into effect on May 1. The depot commissary, Mr. Benj. L. Jacobson, is now replenishing the stock which was allowed to run down. Efforts have been made to improve the service in the line commissaries. Suggestions were asked from the patrons, and a large number of helpful and practical replies were received. As many of these were adopted as were feasible. The Rio Grande commissary was closed effective May 1. Service at the Paraiso commissary is more unsatisfactory than at any other point along the line on account of the inadequacy of the building.

The commissary accounts for the quarter ending March 30 were closed and show a net profit for the three months of \$4,595.22. This is a profit on operations only and does not include depreciation on the manufacturing plant, line commissaries, and equipment. Such depreciation amounts to approximately \$2,500 per month, so the commissaries show a loss of \$3,000 for the last quarter."

Detaching Commissary Coupons.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., June 16, 1914.

CIRCULAR No. 156:

*District quartermasters and commissary storekeepers—*Gold customers will be permitted to detach their own coupons, if they desire to do so, when making payments to solicitors, and in commissaries where there are no cashiers. Coupons must be detached in the presence of the sales person or the solicitor. Previously detached coupons will not be accepted.

To avoid unnecessary issues of change checks, care should be taken by patrons not to detach too many coupons and to always detach the largest possible denominations; as, for a purchase of 93 cents, three 25-cent, one 10-cent, one 5-cent, one 2-cent, and one 1-cent coupon should be detached.

R. E. Wood,
Chief Quartermaster.

Bread Shipments.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., June 18, 1914.

CIRCULAR No. 568:

The bakery at this depot will hereafter be closed on Saturday. Bread baked on the Friday night shift will be shipped on the Saturday morning supply train for use on Saturdays and Sundays. Bread baked on the Sunday night shift will be shipped, as heretofore, on the Monday morning supply train for use on that date. The shipment to hotels on Saturday morning, June 20, will therefore, include the order for that date and for Sunday June 21, and this arrangement will be followed weekly thereafter.

BENJ. L. JACOBSON,
Depot Commissary.

Sale of Ice to Silver Employees.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., June 22, 1914.

CIRCULAR No. 47-1:

*District quartermasters, commissary storekeepers—*Effective at once, all silver employees will be permitted to purchase ice. Ice will not be delivered to the quarters of such employes, but must be called for at commissary platform.

Silver employees desiring to purchase ice must pay for same not later than the 28th of each month for the following month. Orders for less than a full month will not be accepted.

R. E. Wood,
Chief Quartermaster.

Commissary Cold Storage.

The commissary stores are open during the following hours: From 8 a. m., to 12.30 p. m., and 3 to 6.30 p. m. The gold departments of the Cristobal store will open at 2 p. m. on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open till 7 p. m.

(Continued on next page.)

(Commissary Department continued.)

* Indicates advance from preceding list.

† Indicates reduction from preceding list.

**Indicates 5 cents allowed for return of bottle.

†Sold only from commissaries; no orders taken for delivery.

§ Sold only from cold storage and not from commissaries.

Purchasers desiring crown roasts will be charged for actual cost of materials used and \$1 extra for labor. When the following are desired: French lamb chops, mutton saddle, tenderloin roast larded, rib roast boned and rolled, a charge of six cents per pound will be made, based on the original weight and actual cost of the materials used in larding.

Porterhouse roast includes any cut of hind quarter down to rump, and will not be cut if orders for steak will consume the supply.

Tenderloins on porterhouse will not be cut and sold separately.

Not less than 1/2 ham or 1/2 shoulder of fresh pork will be sold.

Daily cold storage orders will be filed and kept for at least one month.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,

THE CANAL RECORD.

Ancon, Canal Zone,

Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Governor's Report.

A report of the Governor of the Panama Canal to the Secretary of War, of operations in May, is published in this issue of THE CANAL RECORD. It recounts the operations on the Isthmus during May, and gives the status of the principal features of the Canal construction at the close of the month.

Pooling of Launches at Cristobal.

Effective July 1, all launches in the Atlantic terminal port were transferred to the Department of Transportation, and operated under the direction of the captain of the port, Cristobal.

The launches will rendezvous at Cristobal boat landing between piers 8 and 9, and will be dispatched from there by telephone orders from the captain of the port's office, when required by representatives of the various divisions. When a launch is required for official use by any representative of a division, the procedure will be to telephone to the captain of the port's office, telephone No. 32, Colon, stating the hour and place for reporting, and nature of service required. The captain of the port will then detail the most suitable launch available for the service required.

The cost of launch service will be at an hourly rate, to be fixed by the costkeeping accountant. For this purpose, the launches are to be divided into three classes, as follows;

Class A—Patrol, Mary S.

Class B—Psyche, Dixie, Vedette.

Class C—Bonito, Toro Point, Aranal.

The above classification is in accordance with probable expense of operation.

Lightning Strikes Range Tower at Gatun.

During an electrical storm at Gatun at about 4 p. m., on Tuesday, June 23, lightning discharged through the range tower on the center-wall. An investigation showed three

or four places in the roof where the concrete had been knocked off exposing the reinforcement irons, and the curved glass window was cracked in several places. The extension light was punctured and the fuse blown on the grounded side at lighting cabinet in the operating tunnel. The path to the ground for the discharge appeared to be from the ball and point through the reinforcement irons down to the floor on which the light standard is fastened through the extension light to grounded side of lighting cabinet in the operating tunnel.

Canal Zone Supreme Court Dissolved.

The Supreme Court of the Canal Zone held its last session on Tuesday forenoon, June 30, from 9.30 to 10 o'clock, when the organization was formally dissolved and an adjournment was taken *sine die*. Following the session, a photograph was taken of the retiring justices, H. A. Gudger, Chief Justice; Thomas E. Brown, Jr., and W. H. Jackson, Associate Justices, together with other court officers. The Panama Canal Act of August 24, 1912, authorized the President to continue the Supreme Court of the Canal Zone and retain the judges thereof in office for such time as to him seemed necessary to determine finally any causes and proceedings which might be pending therein. The Executive Order of the President carried this plan into effect, and since April 1, the date the Canal law became operative, all business before the Court has been closed up. An article on the establishments of the Courts of the Zone was published in THE CANAL RECORD of April 8, 1914.

Life Boats for Lock Approaches.

The General Purchasing Officer was instructed by cable on June 20 to purchase six metallic lifeboats from the Welin Marine Equipment Company at \$354 each, a total of \$2,124. Bids had been invited from 19 manufacturers of this sort of equipment, nine of whom submitted proposals. The boats are to be 22 feet long by six feet six inches in the beam, and No. 16 B. & W. gage galvanized steel will be used in the construction of the hulls. These boats are to be used in the upper and lower approaches of all locks.

Dock 13 Office Vacated.

The Dock 13 office of the Division of Terminal Construction, Atlantic Terminals, has been vacated. The office force connected with the coaling plant has been moved over to the site of the work on Mindi Island, and the office force connected with the east breakwater has been moved to Coco Solo, at the inner end of the breakwater trestle. Effective at once, all correspondence hitherto addressed to Dock 13 office pertaining to the new coaling plant should be addressed to Superintendent W. G. Thompson, office, Cristobal coaling plant, Mindi Island, Cristobal, C. Z. Similarly, correspondence pertaining to the east break-

water should be addressed to Supervisor C. C. Snedeker, office, east breakwater, Coco Solo, Cristobal, C. Z.

Balboa a Main Line Station.

Beginning with Sunday, June 28, Balboa became for the first time in its history, a regular station for all passenger trains using the main line. The first train making this stop was No. 52, leaving Panama at 12.40 a. m., for Las Cascadas. A temporary shelter for passengers has been erected at the foot of Administration Hill, but plans are under consideration for a permanent modern station, which will be situated, probably, in the same general locality.

The new line to Balboa leaves the direct route to Panama at Diablo Hill, just south of Corozal, and follows the fill begun in 1907 in connection with the project for the formation of a lake on the Pacific side by the construction of three earthen dams, known as Sosa-Corozal, Sosa-San Juan, and Corozal-Diablo, and the building of two flights of locks on the west side of Sosa Hill. The instability of the material overlying the rock in this locality led to the abandonment of the plan and the selection of the Miraflores site instead. For some time after dumping was stopped, the embankments continued to settle, but eventually all movement ceased, and today, the earth fills are as solid as could be desired. At the Balboa station, the new line makes a long curve to connect it with the track to Panama which runs over the fill made a year or more ago, north of the old branch line track. The distance from Colon to Panama, following the new route, is 47.61 miles; the direct line was 47.08 miles long, therefore, the road has been lengthened .53 of a mile.

Balboa (formerly La Boca) was decided upon by the Panama Railroad Company as its deep water port on the Pacific in the early '90s. At that period, the bad condition of the company's wharves in Panama city, and the excessive cost of lighterage made a change highly desirable. Actual work on the new port improvements was begun in 1896. The steel pier was completed in 1899, and at the end of 1900, there remained only a small amount of material to be excavated from the basin, which was alluded to on various occasions in the Panama railroad reports of the period as the "Basin of evolution." In 1900, vessels of 3,000 tons register could come up to the pier and discharge their cargoes. The approximate cost of the port works and all appurtenances was about \$1,500,000.

Although Balboa, or La Boca, was the only port of entry on the Pacific side of the Isthmus for handling cargoes from ships engaged in foreign trade, it had always been served by a branch line from Panama up to 1906, when, due to the increase of operations incident to Canal construction, a cut-off, known as the Balboa wye, was completed; there-

after, all through freight and construction trains using the main line were run over it. Passengers disembarking at Colon for the purpose of taking ship at Balboa will continue to use the branch line trains, as the new station is at some distance from the railroad company's wharves; the baggage of these passengers will be transferred at Panama, as heretofore.

PERSONAL.

Joseph Bucklin Bishop will sail for New York, with his wife and daughter, on the *Allianca*, on July 3. He will go to the United States under orders from Governor Goethals for service in connection with the Panama Canal exhibit at the Panama-Pacific Exposition in San Francisco, which will continue until July 16, on which date his resignation will go into effect. He was appointed Secretary of the Isthmian Canal Commission, at the suggestion of ex-President Roosevelt, on September 7, 1905. After two years of service in the Washington office of the Commission, he came to the Isthmus in August, 1907, and has since resided here. He designed and founded *THE CANAL RECORD*, by authority of the Commission, in September, 1907, and has been its editor from the first number to the present time. He has also been the author of the four editions of *The Official Handbook* of the Canal. Previous to entering the Canal service, he was for 35 years engaged in journalism in New York, chiefly as an editorial writer, first with *The Tribune*, and later with *The Evening Post*. He is the author of several books, including *Cheap Money Experiments*, 1892; *Our Political Drama*, 1904; *Issues of a New Epoch*, 1904, and *The Panama Gateway*, 1913. After retirement from the Canal service, he will enter upon a contract with Charles Scribner's Sons, publishers, New York, for literary work in connection with their magazine and publication department.

Lieut. Geo. R. Goethals, who has been employed as assistant engineer in charge of the fortifications division of the Canal work, sailed June 24, on a month's leave of absence, at the expiration of which, he will be relieved to allow him to comply with War Department orders directing him to report at West Point, where he will become an instructor in the United States Military Academy. He first entered the Canal service on May 20, 1908, as instrumentman, and was relieved on September 1, 1909. He was again detailed for duty on the Isthmus and entered the service on November 11, 1913, and, after completing his work on the Panama railroad, was assigned to the fortification work.

Mr. Hezekiah A. Gudger, formerly Chief Justice of the Supreme Court of the Canal Zone, accompanied by Mrs. Gudger, left the Isthmus on the steamship *Pastores* of the United Fruit Company's line on Wednesday, July 1. He has been on the Isthmus since 1897, when he was appointed United States Consul-General in Panama. He held this office until February 24, 1905, when he was appointed Associate Justice of the Supreme Court of the Canal Zone. This office he held until January 4, 1909, when he was promoted to Chief Justice of the Supreme Court of the Canal Zone. He was born in Marshall, Madison County, North Carolina, and was educated in the public schools, and at

Waverly College, where he took his degree of Master of Arts. He finished his education at Bailey's Law School, Asheville, North Carolina, and in 1872, began the active practice of his profession in Marshall. He represented his State in the Legislature for six years, and was judge of the criminal court in Madison County. He went to Washington in 1894, where he was an assistant in the office of the Attorney General, having special duties in connection with the Indian depredation claims. He is a Royal Arch and Templar Mason; also, a member of the Odd Fellows, and the Knights of Pythias.

Mr. Thomas Edwin Brown, Jr. formerly Associate Justice of the Supreme Court of the Canal Zone, accompanied by Mrs. Brown, sailed from Colon on the steamship *Pastores* of the United Fruit Company's line, on Wednesday, July 1. He has been on the Isthmus since April, 1907, when he entered the service of the Isthmian Canal Commission as District Judge, with station at Cristobal. He continued in this post until April, 1911, when he was appointed Associate Justice of the Supreme Court of the Canal Zone. In addition to his service in the judiciary of the Canal Zone, he has served the Department of Civil Administration by appearing as prosecuting attorney. From August to November, 1907, he was acting prosecuting attorney, and during the spring of 1908, he was special prosecuting attorney. He was born in Brooklyn, N. Y., received his early education in the public schools of Rochester, and fitted for college in the University Grammar School at Providence, Rhode Island. He entered Brown University, and was graduated with the class of 1890. After leaving college, he went West and engaged in newspaper work in Tacoma, Washington. On his return to the East, he studied law at the New York Law School, and was admitted to the New York bar in July, 1893. He practiced law in the City of New York until his appointment to the Government service in the Canal Zone.

Mr. Fred C. Stanton, formerly assistant engineer in local charge of the work at the east breakwater and Cristobal coaling plant, who sailed for the United States on leave of absence on May 28, has cabled his resignation, effective May 27. He entered the Canal

Estates Being Settled.

The following estates of deceased or insane employes of The Panama Canal or the Panama Railroad Company are now in process of settlement by this office, and any claims against these estates, or any information which might lead to the location of heirs, or to the recovery of property, bank deposits,

service as assistant engineer on September 24, 1907, and arrived on the Isthmus on September 29. He was assigned to duty in the old Chagres Division, which later became a part of the Central Division. On August 26, 1908, he was transferred to the harbor and channel section of the old Atlantic Division, on work in connection with the building of the west, or Toro Point, breakwater. On the completion of this work in the forepart of this year, he was given local charge of the construction of the east breakwater at Coco Solo Point, and, on April 28, in addition to his other duties, he was placed in local charge of the Cristobal coaling plant. Prior to coming to the Isthmus he was with the United States Engineer Department on river and harbor work in Texas, and later, with the Atlantic, Gulf, and Pacific Company of New Jersey.

Obituary.

Jacob R. Shettel, an American, serving as a sergeant in the Signal Corps, United States Army, died at Colon Hospital on Sunday, June 28, following an operation for gangrenous appendicitis and general peritonitis. He arrived on the Isthmus on Thursday, June 25, having been detailed for duty here under Maj. Leonard D. Wildman. He was 43 years of age, and is survived by his wife, living at Fort Leavenworth, Kan.

Notice to Applicants for Hunting, Automobile, Motorcycle, and Bicycle Licenses.

Applicants for hunting, automobile, motorcycle, and bicycle licenses should address all correspondence relating thereto to the Executive Secretary, Ancon, C. Z.

If checks or money orders are sent, same should be made payable to the Collector, The Panama Canal, and forwarded with the application.

Bubonic Plague at New Orleans.

The quarantine authorities have been advised of the reported presence of bubonic plague at New Orleans. The usual precautions are being observed in regard to incoming vessels, which have cleared from that port. So far, these vessels have been required to berth at the new concrete docks at Cristobal, instead of the wooden wharves at Colon.

postal savings or postal money order deposits, or any other moneys due them, should be presented at this office at once, in order that the estate may be settled as soon as possible. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once:

SOCIAL LIFE OF THE ZONE.

High School Commencement.

The fourth commencement of the Canal Zone high school was held in the National Theatre, Panama, on Friday evening, June 26. The stage was set to resemble a conservatory; the high school occupied seats in an open space between running vines and trellises, and the senior class, with their principal, the superintendent of schools, and their guests, were in front. Each of the girls in the class held a bouquet of flowers. Prominent in the decorations of the stage were the high school colors, black and gold. There were nine graduates, making it the largest class that has been graduated from the school. Six of the graduates have taken the four years' work in the Canal Zone school; all are Americans, although one of the girl graduates is a native of Uruguay of American parentage. The States represented were New York, Kentucky, Minnesota, Mississippi, and Ohio. Miss Daniels, the principal, was presented with a silver handbag by the graduating class, following the presentation of diplomas.

The program was, as follows:

Selection.....Guatemalan orchestra
Invocation.....Rev. Harry Compton
Panama hymn—Recessional.....High school
Address.....Hon. William Jennings Price
Selection.....Guatemalan orchestra
Piano solo.....Señor Raul Panaigua
Presentation of the class of '14.....Miss Jessie E. Daniels, principal.
Presentation of diplomas.....Mr. A. R. Lang, superintendent of schools.

Good night, farewell—

The star spangled banner.....High school
Benediction.....Rev. Harry Compton

The members of the class are: Marion Emily Blake, Mary Eleanor Comber, Blossom Compton, Dorothy Elizabeth Magnuson, Miriam Ruth Stevens, Eva Swinehart, Joseph William Udry, Jr., James Augustine Loulan, Jr., and William Alexander Fraser, Jr. Master Udry was not present, having left for the United States a short time before school closed.

Church Notes.

The ladies' auxiliary to the Christian League of Empire, at its meeting on Friday, June 5, held at the residence of Mrs. H. A. A. Smith, changed its title to that of the missionary auxiliary to the Union Church of the Canal Zone. The character of the organization will remain unchanged. Missionary study meetings will be held monthly as usual. The text book now in use is entitled "The King's business." The officers elected for the ensuing six months, June to December, are, as follows: President, Mrs. W. H. Keenan; first vice-president, Mrs. Phil Kelly; second vice-president, Mrs. Joseph Helmer; secretary-treasurer, Mrs. F. E. Greene. Mrs. H. A. A. Smith will represent the society on the board of the Panama federation of societies of women for Christian work, of which she is vice-chairman. The next meeting of the missionary auxiliary will be held at the residence of Mrs. H. Holman, house No. 31, Empire, on Friday, July 3.

The woman's altar guild, and the parish of St. Luke's Hospital church, Ancon, will hold a reception in honor of the Rt. Rev. Albion W. Knight, D. D. at the Hotel Tivoli, on Monday evening, July 6, from 8 to 10 o'clock. Those interested in meeting Bishop Knight will be welcomed by the chaplain and the members of the guild. The reception will be held in the pergola. On July 28, the altar guild will hold

a bazaar in Ancon Hall. The arrangements for this bazaar are already under way, and a number of interesting features will be presented. Among the booths will be one for the sale of native articles, one representing the Army and Navy, attended by women of the two governmental departments, and one containing useful and attractive articles cut from native hardwoods. The junior auxiliary of the church will also have its own booth, the members having entire charge of the articles sold. The proceeds of this booth will go toward the work of the auxiliary.

The physical culture class of the junior auxiliary of St. Luke's chapel will meet on July 8 for regular exercise. The class will take folk dancing as its special work during the next few months. On Wednesday afternoon, July 15, there will be a lecture under the auspices of the junior club on the hygiene of the mouth and teeth. The lecture will be given by Dr. M. E. Connor, health officer. The members will be admitted free. Tickets will be sold at the door for 10 cents, United States currency. The business meetings of the auxiliary will be held at the home of Mrs. Charles F. Mason, on July 1, and 22.

Nombre de Dios General Assembly, Fourth Degree, Knights of Columbus.

At the adjourned meeting of the first general assembly of the Fourth Degree, Knights of Columbus, held in Panama on Sunday, June 21, 1914, "Nombre de Dios" was selected as the name of the assembly, and the following officers were chosen for the ensuing term: Faithful navigator, Theo. Aanstoos; faithful captain, Ramón Arias, F. Jr.; faithful admiral, J. F. Stahl; faithful pilot, P. F. Corrigan; faithful comptroller, W. J. Durning; faithful inner sentinel, T. P. Shay; faithful outer sentinel, D. R. Donnelly; faithful scribe, John J. Luckey; faithful purser, Wm. J. Owens. Monthly meetings will be held at Cristobal and Panama, alternately, on the third Sunday in each month.

Washington Cotillion Club.

On account of July 4 being a holiday, the next regular dance of the Washington Cotillion Club will be held on Friday, evening, July 3.

BOARD OF GOVERNORS.

CRISTOBAL, C. Z., June 29, 1914.

Order of Isthmian Conductors.

The next regular meeting of the Order of Isthmian Conductors will be held in Ancon lodge hall on Sunday, July 5, at 9.30 a. m.

GEO. B. ALLEN,

Secretary-Treasurer.

COROZAL, C. Z., June 29, 1914.

American Institute of Electrical Engineers.

The July meeting of the Panama section of the American Institute of Electrical Engineers will be held in the control house at Pedro Miguel Lock on Sunday morning, July 12, at 9.15 o'clock. Mr. R. H. Whitehead will present a paper entitled "Hydraulics of the locks." The rates of filling the lock chambers and the currents during lockage will be discussed. Various features of the paper will be demonstrated by actual operation of certain of the valves and gates.

Mr. Horacio Bossi Caceres has been appointed consul general of the Republic of Argentina in Panama.

TO TEACH PANAMA MOTHERS.

Will be Shown how to Properly Feed their Children to Reduce Present High Death Rate.

The mortality rate among children under five years old in the city of Panama has been found to be very high, and the Panama Health Office is preparing to inaugurate a vigorous campaign to relieve this condition. The report for the month of May shows a total of 128 deaths in the city, 53 per cent of this number being children under five years old. A careful study of the situation indicates that the large majority of these deaths among children, the greater number of whom were under two years old, can be traced directly or indirectly to malnutrition, or improper feeding. This was found to be the case in the city of Colon, when, in 1912, a campaign to combat infant mortality was successfully carried on for a considerable period of time, by detailing nurses from the Colon Hospital staff to the work of district visiting in the congested sections of the city.

It has been found that many of the mothers on the Isthmus are unable to nurse their babies beyond three or four months after birth, and that at this period they generally resort to the use of condensed milk or patent baby foods. This is especially true of the poorer class of native mothers, who, when the natural milk fails, appear to be ignorant of any means of nourishing the baby. A formula of condensed and evaporated milk has been developed in the local hospitals which can be modified to meet the requirements of individual infants at any period of their lives. This formula was used in the work in Colon.

A tentative plan has been drawn up by the Health Officer and is now under consideration, for the introduction of the work in Panama under an organization similar to that which was in effect in Colon. For convenience of administration, the city will be divided into four districts, or more if necessary, and a graduate female nurse will be in charge of each district. This nurse will receive special instructions under a head nurse who has been trained in infant feeding, and the entire staff will be under the immediate supervision of the Health Office. In cases where the visiting nurse finds a sick child whose condition is traceable to improper feeding, she will instruct the mother how to prepare and give the food according to the formula, watching the results herself from day to day. These daily visits to the home of the patient will be made until the mother is sufficiently taught to take care of the child without the assistance of the nurse. When children are found suffering from illness not attributable to malnutrition, the visiting nurse will advise the parents to procure the services of a local physician, or, if the family is too poor to do so, she will recommend that the child be taken to Santa Tomas Hospital, where it can receive proper treatment in the free wards.

I. B. of S. S. and D. M.

The next regular meeting of the International Brotherhood of Steamshovel and Dredgemen will be held at Ancon lodge hall on Sunday, July 5, at 1.30 p. m.

R. G. WARREN, Secretary-Treasurer.

COROZAL, C. Z., June 28, 1914.

The launch *Pratique*, formerly in the quarantine service at Colon and Cristobal, has been transferred to the Department of Operation and Maintenance and assigned to the use of the captain of the port at Cristobal.

PROGRAM FOR THE FOURTH.

Official List of Events, and Committees—Plans for the Visitors' Comfort.

Preparations for the celebration of the Fourth of July at Cristobal are practically completed. The schedule for the operation of trains on that day will be found on another page of this issue of THE CANAL RECORD. The official program of the day's events is, as follows:

- 8.45 a. m.—Musical drill, Butt's manual—Tenth Infantry.
- 9.00 a. m.—Athletic events.
- 9.00 a. m.—Tennis tournament.
- 9.00 a. m.—Boat regatta.
- 9.30 a. m.—Concert, Colon municipal band.
- 11.15 a. m.—Fire company race—Empire vs. Cristobal.
- 11.30 a. m.—Patriotic exercises.
- 12 to 1.00—Lunch.
- 1.15 p. m.—Exhibition dive by submarine.
- 1.30 p. m.—Water sports.
- 3.30 p. m.—Dancing, pier No. 10, Tenth Infantry band
- 3.30 p. m.—Children's field meet, road between Piers 8 and 9.
- 5.00 p. m.—Presentation of prizes, pier No. 9.
- 6.00 p. m.—Flag lowering by boy scouts.
- 7.30 p. m.—Fireworks.
- 9.00 p. m.—Dancing, Pier 10, Colon municipal band.

PATRIOTIC EXERCISES.

The patriotic exercises will be held on Dock 9, and will consist of the following:

- America.....Tenth Infantry Band
- Invocation.....Rev. Harry Compton
- Reading of Declaration of Independence.....Judge Wm. H. Jackson
- Address.....Hon. Wm. Jennings Price
- Panama National hymn.....Colon Municipal band
- Star Spangled Banner.....Tenth Infantry band

COMMITTEES.

The committees in charge of the various events are, as follows:

EXECUTIVE COMMITTEE.

- Chairman—Mr. C. A. McIlvaine.
- Chairman, finance committee—Mr. John H. McLean.
- Chairman, entertainment committee—Capt. F. O. Whitlock.
- Chairman, fireworks committee—Capt. A. A. Maybach
- Chairman, transportation committee—Mr. F. R. Blunt.
- Chairman, publicity and printing committee—Mr. John K. Baxter.
- Chairman, music and dance committee—Mr. R. H. Sartor.

ENTERTAINMENT AND AMUSEMENT COMMITTEE.

- Chairman, subcommittee on athletics—Mr. A. B. Dickson.
- Chairman, subcommittee on water sports—Capt. C. A. Black.
- Chairman, subcommittee on refreshments—Mr. B. L. Jacobson.
- Chairman, subcommittee on Tenth Infantry—Capt. R. E. Ingram.
- Chairman, subcommittee on Coast Artillery—Lieut. G. A. Mix.
- Chairman, subcommittee on reception—Com. D. E. Dismukes.
- Chairman, subcommittee on programs and prizes—Mr. J. G. Barber.
- Chairman, subcommittee on decorations and stands—Mr. B. C. Poole.
- Chairman, subcommittee on patriotic exercises—Mr. J. A. Page.
- Chairman, subcommittee on fire department—Mr. Charles F. Koerner.
- Chairman, subcommittee on police department—Lieut. Arthur Kennedy.

OFFICIALS FOR ATHLETIC EVENTS.

- A. B. Dickson, chairman; referee, F. G. Swanson; clerk of course, A. N. Kjellander; assistant clerks of course, Joe Mitchell, Harry Feehan; property clerk, P. T. Woolworth; starter, S. C. Potts; announcer, G. D. Bliss; assistant announcers, D. V. Raymond, William Mathues; timekeepers, Lieut. W. L. Gruber, René Granger, Lieut. C. M. S. Skene, W. G. Russell, D. T. Edwards, C. Dusterheimer; track judges, R. L. Dwelle, Paul Wilson, Lieut. John H. Lindt, E. S. MacSparren; field judges, R. P. Drennan, F. Parker, L. A. Clausel, E. L. Koperski; scorer, A. B. Collins; inspectors, Mark A. Hall, F. L. Herron, Lieut. W. H. Wilbur, C. R. Calhoun; marshal, Lieut. Arthur Kennedy.

OFFICIALS FOR AQUATIC EVENTS.

- Capt. C. A. Black, chairman; referee, Chas. H. Mann; sergeant-at-arms, W. T. Orr; judges, Lieut. W. L. Friedell, M. McLeod, S. P. Hughlings, Ensign G. L. Dickson, Ensign G. A. Rood, Ensign Sargent Force, Capt. F. F. Stewart, C. J. Reilly, Ensign Hall, C. B.

Russell; announcers, John H. Clarke, W. H. Vaughan; clerks, C. R. Chisholm, R. C. Goodfellow, J. C. Hipp, W. F. Smith; A. E. Cotton; starters, W. C. Gardner, E. R. Parsons, George B. Ward, R. Hughes; surgeon, Dr. Miller.

Miscellaneous Notes.

The committee on music and dance are making special provision this year for the dance to be held on Dock 9 in the afternoon and evening of July 4. With that end in view, it was decided to provide a floor of sufficient size to accommodate a large crowd. A floor of tongued and grooved lumber, 175 feet by 42 feet in plan has been constructed on the sea end of dock No. 9. This location gives shelter from rain and sun and a free circulation of air. The decorations will be palms, bunting, signal pennants, and Japanese lanterns, arranged, so as to form a vaulted arch effect over the dancing area. The benches taken from the recently dismantled sightseeing barge will be placed around the edge of the floor to form an enclosed area, and for the convenience of those dancing. Immediately in the rear will be placed rows of chairs for the spectators. The sightseeing cars will also be run in on the adjacent tracks to provide additional seating capacity.

In the afternoon, dancing will be held from 3.30 to 5.30, with music by the Tenth Infantry band. In the evening, when the crowd is expected to be larger, dancing will begin immediately after the fireworks display. The music for the evening dance will be almost continuous, two bands being employed. They will play alternately, allowing about one minute between dances for the floor to clear. The music arranged for the evening dance will be the Colon municipal and the Tenth Infantry bands. Dancing will continue until 12 o'clock, midnight.

Over 150 children have signed entry forms for a total of nearly 400 entries in the children's races on the Fourth. To encourage the school spirit, a different color has been assigned to various schools, and contestants will run under their school colors. The Ancon children will wear orange; Corozal, dark green; Pedro Miguel-Paraiso, purple; Empire-Culebra, blue; Gatun, lavender, and Cristobal, red. The races will begin immediately after the aquatic events, which are scheduled to be completed by 3.30 p. m. The events will be run off on the esplanade and roadway between Piers 8 and 9. An information stand will be located there to satisfy the wants of the children; also, to furnish them their colors, etc.

The children have also been invited to sing in the chorus for the patriotic exercises at 11.30 a. m. Bleachers are being erected close to the speakers' stand large enough to accommodate 250 children.

The headquarters of all committees for the day will be in the new office building of the United Fruit Company, south of the Cristobal fire station, telephone number, Cristobal 4. The boy scouts, under Scoutmaster Ernest C. Bell, will be attached to headquarters, and will act as messengers for committee chairmen and render any other assistance required. Articles lost and found should be reported to Scoutmaster Bell.

Persons desiring to locate friends or points of interest will find a map of Colon and Cristobal, and list of occupants of Canal quarters, at headquarters.

Arrangements have been made for women's and children's rest and toilet rooms, with maids in attendance, in building No. 2, Roosevelt avenue; schoolhouse, between Govern-

ment hotel and Y. M. C. A., and on the Panama railroad steamship *Colon*, lying at Dock 11.

Men's toilet rooms in Y. M. C. A., and House 220, located directly behind building No. 2.

Parcel check room in United Fruit Company's building, open 8.30 a. m. until departure of last train.

Lemonade, ice water, and sanitary drinking cups may be found at several points on Dock 9 and Roosevelt avenue.

Swimming permitted in the slip between Piers 8 and 9, except during afternoon aquatic events. Dressing rooms for men and women at head of slip between Piers 8 and 9. Police Department and Cristobal swimming club will have launches and rowboats in slip for protection of bathers.

Ice cream served to all at lunch, and during the afternoon to children holding tickets, which may be obtained from any member of the refreshment committee.

Lunch will be served on Pier 9, beginning at 12 noon.

Last train for Panama, making all stops, at 12.55 a. m.

The Strangers Club will hold "Open house" all day on the Fourth of July, and the privileges of the club will be extended to guests holding cards from members. Dinner will be served in the clubrooms on the evening of July 4 from 6.15 to 8.30 o'clock.

A merry-go-round has been procured for the celebration, to be located on Roosevelt Avenue; it will be free to all children all day.

Free refreshments will be served to everybody on Dock 9, from 12 to 1 p. m. Meals may also be obtained at the Panama railroad restaurant, the Cristobal hotel, and the Hotel Washington, during the following hours:

Hotel Washington—A la carte, from 7 a. m. to 11 p. m.; *table d'hôte*, from 11 a. m. to 2 p. m., and from 6 p. m. to 9 p. m.

Cristobal hotel—From 6 a. m. to 8 a. m.; from 10 a. m. to 2.30 p. m., and from 4 p. m. to 8 p. m.

Panama railroad restaurant—From 6.30 a. m. to 8 a. m.; from 10 a. m. to 2.30 p. m., and from 4 p. m. to 8 p. m.

Invitations have been sent to the principal Government and municipal officials of the Republic of Panama, which include their families, and to members of the local press. Card passes have also been sent to merchants and others who contributed to past celebrations.

Passes will not be accepted on Panama railroad trains on July 4 from gold employees and Americans who are authorized to buy excursion tickets. These tickets, good for a round trip between any two points on the line, will be sold for 25 cents, United States currency, each, and the money derived from their sale will go toward the Fourth of July fund.

The cover design of the official program this year will represent a young "Patriot" in Fourth of July attire, astride of his hobby horse.

The Canal Zone post-offices will remain closed all day on the Fourth.

Mr. Edward Schildhauer was elected to honorary membership in the Wisconsin Union, an organization composed of alumni of the University of Wisconsin, during his recent visit to Madison, Wis.

A number of athletes of Balboa are training for the meet at Cristobal on the Fourth. The new townsite at Balboa affords an excellent place for running, and is being used for this purpose every night.

CANAL WORK IN MAY.

Monthly Report of the Governor to the Secretary of War.

CULEBRA, C. Z., June 18, 1914.

The Honorable the Secretary of War,
Washington, D. C.

SIR: I have the honor to submit the following report of operations on the Isthmus for the month of May, 1914:

Department of Operation and Maintenance—
Work under the Engineer of Maintenance.

DIVISION OF ERECTION.

The principal work was on erection of towing locomotives, chain fender machines, chain fender sump pumps, transformer rooms, and installation of conductor rail at the locks. The installation of timber buffers at Gatun Locks, transformer rooms at Pedro Miguel, and handrail operating mechanisms and miter gate moving machines at Miraflores was completed.

Nineteen lockages were made at Gatun, 19 at Pedro Miguel, and 20 at Miraflores. The towing locomotives were used in the majority of the lockages, and the locks at Gatun and Pedro Miguel were operated by remote control.

Tests were conducted at the hydroelectric station, and the plant will be ready for active operation in the near future. Electrical installation in the substations is progressing as rapidly as the building operations will permit. The transmission line is practically completed between Mount Hope and a point south of Corozal.

ELECTRICAL DIVISION.

The net output of the power plants was: Gatun, 624,360 kilowatt-hours; Miraflores, 1,785,260 kilowatt-hours; Empire, 100,840 kilowatt-hours; Balboa, 7,302 kilowatt-hours.

The output of the Balboa air compressor plant was 290,388,650 cubic feet of free air, compressed to 105 pounds; Empire, 85,533,309 cubic feet. Maintenance and repair work throughout the Canal Zone, and installation in new and reconstructed quarters, and in the new shops at Balboa, were carried on.

DIVISION OF MUNICIPAL ENGINEERING.

In addition to maintenance work throughout the Canal Zone, this division continued the construction of the new water works for Panama and vicinity. Construction of the purification plant at Miraflores was continued; Miraflores pump station No. 2 was begun; the Ancon pump station was advanced to near its completion, and the high service reservoir at Ancon was completed.

DIVISION OF LIGHTHOUSES.

During the month, work was in progress in constructing the special foundation for beacon No. 32, Culebra Cut section; painting Culebra Cut beacons, and hanging doors in same; installing lanterns in beacons Nos. 3 and 4, Atlantic section; painting spar buoys, and placing 27 gas buoys and five spar buoys on their stations in Gatun Lake; installing light apparatus in Gatun Lake towers Nos. 3 and 22; constructing transmission lines from the east side of Gatun Locks to range towers Nos. 5 and 6, Atlantic section, and along the west side of the Canal between Bas Obispo and Pedro Miguel, and making the necessary surveys and reconnaissances.

SECTION OF METEOROLOGY AND HYDROGRAPHY.

During the month of May, the rainfall was above the station averages at seven stations and deficient at 12 stations. The monthly

totals ranged from 5.66 inches at Alhajuela, to 17.76 inches at Colon. The maximum precipitation recorded in one day was 4.91 inches, at Colon. The estimated yield for Gatun Lake watershed was about 10 per cent below the May average, based on 14 years' record, but the lake continued to rise steadily during the month, it being necessary to open the spillway gates at Gatun to keep the level from rising above plus 85.

Seismic disturbances were recorded at Ancon on the 19th, 28th, and 31st of the month. Aside from slight surface damage to the new administration building at Balboa, the Canal work suffered no ill effects from the shocks.

Division of Terminal Construction.

PACIFIC TERMINALS.

Dry docks—The construction of dry dock No. 2 was discontinued, and no more work will be done upon it for the present. Design and construction were continued on dry dock No. 1. The total excavation for both docks and the entrance basin was 102,676 cubic yards. Four steamshovels were employed. Designs were started for the concrete mixing plant.

Quay wall and piers—Studies and design were continued for adapting the cranes on the Panama railroad wharf to pier No. 1; to compare the relative economy of wood, steel, and reinforced concrete pontoons for boat landing at the quay wall; eight schemes for landing for oil ships were prepared, and a report was made on the construction of 6-foot concrete cylinders for wharf foundations. Excavation amounted to 1,033 cubic yards; concrete placed, 5,917 cubic yards; piles driven for construction trestle of quay wall, 11,470 linear feet. Heavy anchors were placed on the lumber wharf to prevent movement toward the basin, when the dredging is carried to 45 feet below sealevel.

Coal and fuel oil plants—Design was continued on supports for the berm cranes, was begun on the reloader wharf, requisition was made for the greater part of the steel forms for the concrete cylinders for the reloader wharf, and the modification of four berm cranes for use in the plant was advanced. Excavation for the coal pocket amounted to 10,998 cubic yards; concrete placed, 971 cubic yards; rubble masonry retaining walls, 297 cubic yards.

Location of the fuel oil handling plant at Balboa was approved; arrangements were made to move a 4,000-barrel tank from Aguadulce to Balboa; two 250-horsepower boilers from Mount Hope, and two from Rio Grande, were transferred, and will be used in the oil handling plant. The fire wall at tank No. 3 was 50 per cent completed, and completed at tank No. 4; the concrete apron and drain has been completed at both tanks.

Balboa shops—Design and construction were continued on the shop buildings.

ATLANTIC TERMINALS.

West breakwater—The breakwater was completed on May 12, the work for the month including the placing of 825 linear feet of armor rock fill, the total unloaded and placed being 456,549 cubic yards. The total length of the breakwater, including the "Ell," is 11,467 feet.

Porto Bello quarry was closed on April 30, and the work of removing plant was done

in May. The quarry was left in shape to be reopened, if necessary.

East breakwater—Work on this project included construction of yard storage tracks at Coco Solo, installation of tools in the machine shops, ballasting main line tracks, erection of water tank for watering locomotives, and the construction of the double track trestle.

Coaling plant—Plans were issued for the concrete and pile foundation work at the shore end of the site, and requisition was made for steel forms required for the concrete cylinders supporting the wharf structure proper. Piledriving for bridge track foundations, and trestle construction for setting caissons in water were continued; the setting of caissons under reloader foundations, and pouring of concrete for unloader foundations, were begun. Tests of the hydraulic fill were continued.

Dredging Division.

The status of dredging on May 31 was, as follows:

LOCATION.	May. Cu. Yds.	Remaining. Cu. Yds.
Miraflores Locks to Pacific.....	33,201	2,022,985
Miraflores Lake.....	45,181	308,161
Culebra Cut.....	474,131	902,096
Gatun Lake.....	51,000
Gatun Locks to Atlantic.....	410,973
Total Canal prism.....	552,513	3,695,219
Balboa harbor.....	143,543	5,429,393
Cristobal terminals.....	303,036	795,155
Fortifications.....	172,521
Miscellaneous.....	47,019
Total general.....	666,119	6,224,548
Grand total.....	1,218,632	9,919,767

Culebra Cut—Seven dredges removed 114,830 cubic yards of earth and 359,301 yards of rock from the Canal prism. Dredge No. 86 sluiced 6,500 cubic yards of material from Cucaracha slide.

Following is a statement of the excavation in detail:

LOCATION.	Earth. Cu. Yds.	Rock. Cu. Yds.	Total. Cu. Yds.
Hagan's slide.....	7,043	40,042	47,085
East Culebra slide.....	811	38,350	39,161
West Culebra slide.....	35,226	35,226
Cucaracha slide.....	106,976	245,683	352,659
Total.....	114,830	359,301	474,131

Mechanical Division.

Shop orders issued and completed consisted of: Uncompleted, April 30th, 384; authorized during May, 844; total, 1,228; completed during May, 716; uncompleted, May 31st, 298. The foundry output was: Iron, 292,126 pounds; steel, 131,569; brass, 19,010; total, 442,705 pounds. Hostling was done on 5,867 pieces of equipment, repairs on 7,111 cars and 867 other pieces of rolling stock. The work of concentrating hostling and repairs at Balboa shops was continued. The new costkeeping system for Balboa shops had been in effect two months and had already proved its effectiveness; a similar system was put into effect at Cristobal dry dock. At the Cristobal and Paraiso shops, the work was principally on dredging equipment, and seven vessels were docked in the dry dock. Two large jobs were done for steamship companies, and both companies expressed appreciation of the results. An effort is being made to cut down the amount of overtime work.

Division of Canal Transportation.

The offices of the captains of the ports at

Cristobal and Balboa were established on May 5. The respective officers assumed charge of the assignment of wharves, docking and berthing of vessels, furnishing of pilot service to shipping, the admeasurement of vessels for transit through the Canal, and the general supervision and enforcement of Canal and harbor regulations relating to shipping.

Pilots were employed by transfer from the Panama Railroad Company, two; by transfer from the Dredging Division, four; by request on the Washington Office, two; and request was approved by the Governor for the transfer of another employe from the Dredging Division.

On May 14, the superintendent rendered a report on all motor launches in the Canal service, giving general description, service performed, and making recommendations with a view of pooling such floating equipment under the supervision of the captains of the port at the respective terminals.

On May 18, the project of lightening cargo through the Canal was begun. Twelve lighters were diverted to this service, and regular traffic operations have developed, with an approximate round trip schedule of 24 hours. The tug *Mariner* is employed in this work. During the month, 3,276 tons of cargo (vessel measurement tons of 100 cubic feet) were handled by this method.

The Board of Admeasurement, designated by the Governor's circular No. 661-4 of April 9, met in the office of the superintendent on May 20 and discussed the interpretation of the President's Proclamation for the measurement of vessels. Two employes from other divisions were transferred for duty as measurers and experimental measurements of barges and ships were made.

Supply Department.

FORCE.

The force reports for the last week in May show 31,021 employes at work. Of these, 4,349 are white Americans, 693 are European laborers, and the balance are West Indian laborers and artisans. The occupants of Government quarters numbered 8,148 Americans, 1,805 Europeans, and 8,042 West Indians. A congestion exists in family quarters at Ancon, Balboa, and Corozal.

BUILDINGS.

Work on the permanent quarters has been delayed on account of lack of plasterers, all of the plasterers being used in the administration building.

All of the original work authorized at La Boca has been completed. Two Type-18 houses and the Y. M. C. A. from Porto Bello, and one of the wards at Ancon Hospital, authorized afterward, are now in course of construction at La Boca.

MATERIALS AND SUPPLIES.

The movement of material was heavy during the month. All live stock has been transferred from Empire and that store left in charge of a caretaker to inventory the obsolete and surplus material left at the storehouse, disposition of which has not yet been determined.

The total value of material received during the month was \$1,025,088.36. The material came forward in 44 steamers, total weight of cargo, exclusive of lumber, ties, and piling, being 21,297 tons. Some of the more important items received were: Lumber, 2,035,057 feet; cement, 232,795 bags; pig iron,

156,230 pounds; clay conduit, 54,451 pieces; hollow tile, 41,976 pieces.

SUBSISTENCE.

Subsistence operations showed a net profit of \$2,288.91, of which \$777.30 was returned by the Hotel Tivoli. Operations of the Hotel Washington in April returned a profit of \$723.34. The accounts for May are not yet closed. These profits do not take into account depreciation of plant.

COMMISSARY.

The new organization of the commissary division was practically put into effect on May 1. Efforts have been made to improve the service in the line commissaries. Suggestions were asked for from the patrons and a large number of helpful and practical replies were received. As many of these were adopted as were feasible. The Rio Grande commissary was closed, effective May 1. Service at the Paraiso commissary is more unsatisfactory than at any other point along the line, on account of the inadequacy of the building.

The commissary accounts for the quarter ending March 30 were closed and show a net profit for the three months of \$4,595.22. This is a profit on operations only, and does not include depreciation on the manufacturing plants, line commissaries, and equipment. Such depreciation amounts to approximately \$2,500 per month, so the commissaries show a loss of \$3,000 for the last quarter.

Accounting Department.

Classified Canal expenditures to March 31 were, as follows:

Civil Administration.....	\$6,972,122.09
Law.....	60,109.73
Sanitation.....	17,106,313.22
Construction and Engineering.....	204,087,126.12
General items.....	89,947,354.99
Fortifications.....	4,485,976.35
Total.....	\$322,659,002.50

The status of appropriation cash on May 31 was:

Cash balance.....	\$9,083,812.75
Estimated payments, June.....	3,125,000.00
Cash balance, fortifications.....	5,226,071.30
Cash balance, private acts.....	3,500.00

The salaries and wages for the month of June, and the amount of rolls for accrued leave, for which no definite figures are available, are payable in July and are proper charges against the above appropriations. The amount remaining in the salaries and wages appropriations will not be sufficient by several hundred thousand dollars to meet the expenditures properly chargeable against such items. The amount of the deficiency cannot be estimated until the accrued leave roll has been completed.

Department of Health.

The health of employes has continued good. No cases of yellow fever, smallpox, or plague originated on, or were brought to, the Isthmus during the month. The number of admissions to hospitals and quarters was 1,633, or a rate of 407.92 per thousand per annum, as compared with 350.59 for the preceding month, and 468.59 for the corresponding month of last year.

The number of deaths from all causes was 39. Of these, 23 died from disease, or 5.74 per thousand per annum, as compared with 5.52 for the preceding month, and 5.42 for the corresponding month of last year. The diseases causing the largest number of deaths, were, as follows: Lobar pneumonia, seven,

and tuberculosis, six. No other disease caused more than one death.

The number of employes per thousand constantly sick was 11.65, compared with 12.07 for the preceding month, and 15.35 for the corresponding month of last year. The admission rate to hospitals for malaria was 50 per thousand per annum, as compared with 36 for the preceding month, and 36 for the corresponding month of last year; 21 per cent of all admissions were due to this cause. The next highest admission rate was due to diseases of the digestive system, and the respiratory system, each having the same number of admissions, and the next to venereal diseases.

The admission and death rates for disease for black employes were 124.70 and 5.95 per thousand per annum, as compared with 393.37 and 4.66 for white employes. The noneffective rate for disease and injuries for black employes per thousand was 9.94, as compared with 20.55 for white employes. The admission rate for malaria was 42.56 per thousand per annum for blacks, as compared with 87.07 for whites. The much higher admission and noneffective rates for whites, as compared with blacks is, no doubt, due to the fact that the whites receive pay for 24 days per year while sick from disease, while the blacks do not.

Executive Department.

COURTS.

Four cases were disposed of in the Supreme Court, and eight cases were pending at the end of the month. In the district court, seven civil, 50 criminal, and 60 probate cases were settled. In the magistrates' courts, 32 civil and 351 criminal cases were tried.

POSTS.

Money order sales amounted to \$293,501.56, and the fees to \$1,407.64; receipts from stamp sales, \$6,457.46; deposits in savings accounts, \$109,580; withdrawals, \$136,346.

POLICE AND FIRE DIVISION.

Arrests numbered 369, of which 30 were of women. Fourteen convicts were committed to the penitentiary, and seven were discharged; total in confinement at the close of the month, 84. The cost of guarding and subsisting the convicts was \$1,234.31, and the value of their work was \$1,208.10.

Nine fires occurred, with merely nominal loss.

SCHOOLS.

The net enrollment in the white schools was 1,266, the average number belonging, 876.1, and the average daily attendance, 836.3. In the colored schools, the net enrollment was 1,484, the average number belonging, 723.7, and the average daily attendance, 557.2.

Respectfully,

GEO. W. GOETHALS,
Governor.

To Close Corozal Junction.

On account of the decreased use of the tracks leading to Miraflores Locks, the interlocking plant at Corozal Junction was placed out of service on Sunday, June 21. A new manual block signal will be erected at Corozal station to govern the territory, and trainmen entering or leaving the branch to Miraflores Locks will protect with flags.

Pasturing Animals at Corozal Farm.

The rate for pasturing private animals at the Corozal farm is \$3 a head per month; the rate for Government animals is \$2 a head per month.

NEW TUGS FOR THE CANAL.

Boats of Powerful and Heavy Type for Handling Vessels at Entrances.

Bids for furnishing two or four steel tug-boats, complete, and ready for operation, for use in handling and docking vessels at the entrances to the Canal were opened at the Washington Office on March 23. The bids were forwarded to the Isthmus, to be passed on by the officials in charge of the work in which the tugs are to be used. The committee, to which the bids were referred, returned them with its recommendations, and award for two tugs has been made, by authority of the Secretary of War, to the Staten Island Shipbuilding Company, Port Richmond, N. Y., for \$152,000 each, a total of \$304,000. Delivery of the first tug is to be made within 295 days, and of the second within 440 days. Both will be delivered at Colon.

The two tugs will be identical in measurements, equipment, and finish. Their principal dimensions are, as follows: Length over all, 125 feet six inches; length between perpendiculars, 112 feet; breadth on deck, 30 feet; depth molded, low point, 17 feet; mean draft, loaded, 13 feet three inches. Their normal speed is to be 13 knots per hour, under the propulsion of engines of 1,000 horsepower, driving single screws.

These tugs will be heavier and more powerful than the general run of tugs at present in the Canal service. Their length exceeds that of all of the present tugs, except the *Reliance* and the *Porto Bello*, which are 134 feet and 126 feet long, respectively. Their beam considerably exceeds that of any of the present tugs, the nearest being the *Mariner*, with a breadth of 25 feet five inches. The only tug in the present service having engines of 1,000 horsepower is the *Reliance*. The present tugs burn coal for fuel, and the two new vessels will be equipped to use crude oil. In general, it is the plan to have them of the most modern and efficient type of harbor tug.

The materials and assembling of the tugs are to conform in every respect with Lloyds' Rules for vessels of this class, and with the requirements of the United States Steamboat Inspection Service. Upon the completion of each vessel, and before its departure for the Isthmus, it is to be tested by a 6-hour run of its machinery at dock, a 5-hour speed test, and heeling tests to determine the transverse stability. After arrival at the Canal, the tugs will be required to undergo 30 days' satisfactory operation under working conditions before final acceptance.

The propelling engine of each tug will be a vertical inverted compound surface condensing engine of standard marine design, having cylinders 24 inches and 50 inches in diameter, with a stroke of 30 inches. It must develop not less than 1,000 indicated horsepower at 100 revolutions per minute, under a steam pressure of 150 pounds to the square inch at the boiler, without the use of by-passes. The engine will be fitted with an independent surface condenser and an independent air pump. All forgings and all steel castings in the engine are to have a tensile strength of 60,000 pounds, with an elongation of at least 30 per cent in two inches. The reversing engine will have a cast iron steam cylinder eight inches in diameter by 16-inch stroke. The crank shaft for the propelling engine will be of the built-up type; the propeller

shaft will be 11 $\frac{3}{4}$ inches in diameter, 12 inches at the bearings. The propeller will be of cast steel, 11 feet six inches in diameter, and with a pitch of 14 feet six inches. It will be fitted to the shaft with a taper, and held in place with a key and nut.

There will be two single-ended return tubular cylindrical boilers of the Scotch type, each measuring 12 feet six inches by 12 feet, and having two 44-inch corrugated furnaces. The boilers will be built for a working pressure of 150 pounds per square inch, conforming to the requirements of the United States Steamboat Regulations and Lloyds' Rules. All circular seams will be double-riveted; longitudinal seams will be double butt-strapped and treble-riveted. Plates will lie up, metal to metal, before being riveted, and rivets will be driven hydraulically as far as possible. The boilers will be arranged for burning oil fuel. The usual dry pipes, steam and reflex water gages, main and auxiliary stop valves, feed, check, and blow-off valves will be fitted, in addition to duplex safety valves. The boilers will be operated under a system of forced draft; a diamond flue blower, hydrokineter, and automatic circulator will be fitted to each boiler. Forced draft will be furnished by a direct-connected turbine fan blower, mounted on a common bedplate, amply able to deliver 10,500 cubic feet of air per minute against a 3-inch static water gage pressure at the fan while operating under a steam pressure of 125 pounds at the turbine.

Lubricating oil will be supplied from three 60-gallon tanks installed in the engine room.

The one condenser will be of the surface, circular, steel plate type, having not less than 2,000 square feet of cooling surface. Tubes will be of brass, $\frac{5}{8}$ -inch outside diameter, tinned inside and out, and with a pitch of one inch. An auxiliary circulating connection is to be made from the general service pump to the condenser.

The circulating pump will be of the centrifugal type, with an 8-inch discharge pipe and two independent 8-inch suction from the sea. The sea valve strainers will each have 100 square inches clear area. The pump will be direct-connected with an 8-inch by 8-inch vertical engine, both mounted on a common bedplate, and will be arranged to discharge through the condenser, or overboard. This pump is to be fitted as a wrecking pump.

A separate general service pump is to have cylinders 18 by 10 by 12 inches, and draw from the sea, peak tanks, or bilge, and will discharge into the condenser, fire mains, peak tanks, or sea. A return relief valve is to be placed in the fire main, so that the pressure in the main will not exceed 150 pounds. In connection with the fire pumping, four 50-foot lengths of 2 $\frac{1}{2}$ -inch linen fire hose, with standard nozzles and spanners, will be coiled in suitable hose racks of the swinging type, in various parts of the vessel.

The vessel will be lighted by electricity, generated by two 10-kilowatt, 110-volt, direct-connected, turbine driven generators. Eighty-four 16-candle power tungsten filament lamps will be placed in the vessel, and an 18-inch, 35-ampere searchlight will be mounted on top of the pilot house. The searchlight circuit will lead from the switchboard, having no connection with the incandescent circuit. The ship's running lights will be combination, oil and

electric, fitted with 6-inch fresnel lenses in brass cases.

A 20-foot metallic lifeboat will be fitted on suitable chocks beneath a set of davits, and provided with mast, sail, oars, 27-inch ring life buoy, water breaker, etc. Two 30-inch ring buoys, attached to 100 feet of manila rope, and 18 cork life jackets are to be stowed aboard the tug.

A 10 by 24-inch deep tone single chime whistle, fitted with automatic recording whistle control, will be placed on the forward side of the smokestack and arranged with double pulls in the pilot house. An electric signal whistle will be installed to work in conjunction with the steam whistle.

Complete tool equipment is to be furnished for the engine and dynamo rooms; the quarters, galley, and mess room are to be completely equipped with furniture, linen, utensils, etc., a great many spare parts supplied for the machinery, and general equipment and materials are to be furnished to fit the vessel completely for occupation and operation.

Sales of Old Material.

Sales of material and equipment by the Supply Department during May aggregated \$94,192.10, divided, as follows: Stock material, \$12,868.46; second-hand and obsolete material and equipment sold on the Isthmus, \$8,756.06; second-hand and obsolete material and equipment sold in the United States, \$2,193.59; collections under scrap contracts, \$141.39; sales to the Panama railroad, \$70,232.60. The second-hand equipment sold included two 2-yard concrete mixers, one engine, and a boiler to the Chile Exploration Company of Chuquicamata, Chile.

Gamboa Shows Slight Growth.

Forces of the building division of the Supply Department are completing a 4-family house at Gamboa, to be occupied by the families of gold men working at the gravel plant. This will increase the family quarters for gold employees to eight, in addition to such accommodations as are afforded by four box cars. Twenty inspected and condemned box cars are occupied by silver employees and their families. A commissary store is housed in two box cars. The local agent of the Panama railroad is acting as postmaster. The village will probably be slightly enlarged with the erection of quarters for employees working at the north end of the Cut, but it is not the intention to issue leases on building lots to private individuals.

Value of Canal Supplies Received in May.

The total value of material received during the month of May was \$1,025,088.36, distributed, as follows:

Mount Hope (stock).....	\$432,777.01
Division of Erection.....	280,394.98
Light house Division.....	719.79
Meteorology and Hydrography Division.....	389.15
Division of Terminal Construction.....	41,976.20
General Construction Division.....	570.00
Dredging Division.....	43,114.46
Mechanical Division.....	76,833.60
Health Department.....	5,755.60
Panama railroad.....	48,249.70
Division of Municipal Engineering.....	34,098.50
Executive Secretary.....	1,314.54
Fortifications Division.....	11,334.01
Auditor, Panama Canal.....	245.45
Permanent buildings.....	47,315.27

Total..... \$1,025,088.36

The material came forward in 44 steamers, the total weight of cargo, exclusive of lumber, ties and piling, being 21,297 tons.

COMMISSARY ORGANIZATION.

Outline of Plan Under which its Various Units Are to be Operated.

The Chief Quartermaster has issued a memorandum to the retail commissary storekeepers, reading in part, as follows:

Under the Supply Department have been consolidated the former Quartermaster's, Commissary, and Subsistence Departments. It is intended that this consolidation shall be actual and not merely nominal, and that, as soon as possible, the three organizations shall be fused into one working unit.

ORGANIZATION.

From the old commissary organization three divisions have been formed:

1. Purchasing.
2. Wholesale.
3. Retail.

The purchasing department will make purchases on requisitions prepared by the wholesale department. The purchasing department will be in charge of the assistant chief quartermaster, as purchasing commissary.

The wholesale department will be charged with the upkeep of stock and the operation of all wholesale warehouses and manufacturing plants; it will prescribe a standard stock for each "Line" commissary. This department will be in charge of the depot commissary, reporting to the assistant chief quartermaster.

The retail department will consist of the "Line" commissaries. The "Line" commissaries, excepting only the Ancon, La Boca, Balboa, Camp Bied, and Cristobal branches, are placed under the direction of the respective district quartermasters. The excepted stores will report direct to this office.

The district quartermasters will handle the "Line" commissaries through the storekeepers in the same manner that they now handle the quartermaster's storehouses in their districts. I will hold them responsible and they will hold you.

Before the district quartermasters can exercise any effective control over the commissaries in their districts, they must become familiar with the commissary operations and methods; you will be expected to give them every assistance in acquiring this knowledge.

The district quartermasters will be expected to make frequent inspections of the commissaries in their districts and to take up with the storekeepers any matter which they think requires attention.

The general policy of the department will be determined upon by this office, and deviations therefrom made only after securing authority from me.

The commissary inspector will report direct to the Chief Quartermaster. It will be his duty to interpret the policy of the department and advise with the district quartermasters and storekeepers and to submit recommendations as to discipline and distribution of force. He will call the attention of storekeepers to matters relative to force, stock, or condition of stores requiring correction, and report thereon to the Chief Quartermaster.

STOCK.

The depot commissary will prescribe a standard stock for each "Line" store. In the meantime you will make a careful examination of every item of merchandise in your stock as directed in my letter of April 14. Any article that you consider unsalable at the present price, or that you do not expect to sell within a reasonable time, say three months,

should be listed and the lists forwarded to the depot commissary. In their preparation, pay special attention to colors and sizes. It frequently happens that while some colors and sizes sell more rapidly, it is almost impossible to get rid of others before they deteriorate, so as to become unsalable. This is especially true of such articles as straw hats, shirts, collars, belts, etc. This survey of dead and surplus stock must be exhausted and complete. No excuse will be excepted for failure to include therein any such articles in your stock at the present time.

It is proposed to include in the standard stock articles for which there is constant demand. Articles for which the demand is known in advance may also be stocked, but the general policy will be to purchase articles not included in the standard stock only when ordered and paid for in advance. In such cases we will add to the cost price an agent's commission equal to our usual surcharge on the class of merchandise purchased. The demand will be arrived at by the consumption records for articles in stock and the calls for articles out of stock. A pad of paper will be left on each counter to record the latter. Salesmen will be required to make a note of all articles out of stock, or sizes or colors called for. These will be compiled in your office and weekly report made to the depot commissary, copy being sent to this office. This report must show number of calls, steps taken to procure stock, and if procured, when and where.

It is understood that a complete line cannot be carried in all stores, and that many articles cannot be regularly stocked without loss. When calls for these are received, your answer must be in effect, "We do not have it in stock, but will get it for you if it is on the Isthmus."

The smaller stores should use the larger stores in their districts as subdepots, and draw freely on them for such articles as they cannot keep in stock. They should also obtain from them cigars, cigarettes, and tobacco that they cannot take in unbroken boxes or cases; and groceries, etc., that they cannot take in case lots.

The inventories of the wholesale departments are being typewritten, and several copies of them will be distributed among you and passed from store to store. They will show the name, stock number, price, and quantity on hand in the wholesale stores. These are to be used in the preparation of your requisitions, and in laying in a stock of all articles for which you believe there is a demand in your territory. They will also be used in the preparation of your inventories, and should be checked against the retained copy of your last inventory sheets, in order that your sheets may be brought to conform with those in the wholesale stores. This applies not only to the descriptions, but to the order in which the various items appear.

Fresh fish should always be ordered for Friday, and every day if the demand warrants it. Special orders for fresh fish should be placed with the local buyer, Panama, whenever requested by patrons.

In regard to carrying cold storage meats and fresh vegetables for sale over the counter, you must be guided by the demand. It is desired, so far as possible, to keep a quantity of such items in stock sufficient to meet all ordinary demands. This stock will be kept fresh by your cooperation with the hotel

stewards. The latter will be required to consult with you daily before placing their requisitions, and to clear you of such meats, vegetables, and bread as you may desire to dispose of, the price to be agreed upon between you.

This is not to be construed as authorizing you to work off foodstuffs in bad condition on the hotels, but rather to insure that your supply for sale over the counter is always fresh and in good condition, and that the hotels get the benefit of any reduction in price necessitated by this policy.

The practice of making monthly requisitions for drygoods, hardware, and boots and shoes, and letting it go at that, must be at once discontinued. The main requisitions may be placed monthly, but supplemental orders should be sent in at least once a week.

You all have, or should have, stock books made up showing the name, stock number, and price of articles carried. For the present, use these as a standard stock list and show opposite each item the maximum and minimum stock to be carried. Where your trade runs to particular sizes or colors, show the proportions of each to be ordered. See that your salesmen, checkers, and store assistants keep the stock up. Do not forget, however, that to the public and to me, you, personally, are and will be held responsible for its upkeep.

Coffee should be ordered at least twice a week, so as to keep the stock fresh and prevent deterioration. Tobacco should be ordered at least once a week. Go through your show cases and tobacco safes and sort out all moldy, musty, broken, or worm-eaten cigars, cigarettes, and tobacco. Working off broken, musty, or otherwise imperfect cigars, cigarettes etc., on either the gold or silver side is absolutely prohibited. Send any that you have back to the warehouse at Cristobal, where they will be examined and the price reduced if found in any way salable. See that hereafter you buy in such small quantities and so frequently that, while keeping up an ample stock, none of it spoils on you.

EMPLOYEES AND THE PUBLIC.

There must be a radical change in the attitude of the commissary employees to the public. There are frequent complaints of discourtesy, inexcusable delays in waiting on customers, unwillingness to show goods, and lack of interest in making sales on the part of the selling force, and of curtness and indifference on the part of the storekeepers and their assistants on the gold roll. From now on it must be understood by every one of you, and by every employe working under you, that, as public servants, the employes of the retail stores will be required to serve the public promptly, efficiently, and with courtesy and interest. Your men will be judged, and you will be judged, by their sales records, their courtesy, their accuracy, and the satisfaction they give their customers.

When a customer approaches a counter the salespeople must be alert to serve and painstaking and obliging in showing goods and replying to inquiries. Watch them in action and weed out the slow, the sulky, the impolite, and indifferent. The same holds true of checkers and store assistants. Service and courtesy have to be the keynotes of the organization, and those who feel they cannot conform had better leave while they have any option.

One point that deserves and must be given special consideration is the reception of com-

plaints, whether relating to character of service or goods supplied. To the storekeeper, the handling of complaints is part of his daily work, (it must be a constantly decreasing part of his daily work in the future), and individual complaints do not assume much importance; in his eyes. But to the customer the subject of the complaint is of considerable importance, otherwise, they would not come to you, and its reception by the storekeeper may make a friend or an enemy of the department. Show interest in what they have to say. Accede to their request if you can do so consistently and if you cannot, explain briefly the rule governing the point. Under all circumstances keep your temper. The policy of the department is to be liberal in the matter of exchanges. Give the customer the benefit of the doubt. It is the exception when employees deliberately try to cheat the commissary.

The silver customers cannot be handled with the same nicety that is expected to characterize the service on the gold side. Their number, the physical limitations of the commissaries, and the prime necessity of getting them served in the short time allowed them by their working hours for the making of purchases, preclude this. They must, however, be treated with politeness and every effort made to show them goods, and to see that they get what they want. No discrimination must be shown against them in the matter of wrapping their purchases.

Salesmen and checkers must not enter into arguments with insulting, obstreperous, or disorderly customers. They should notify their immediate superior, and if authorized by him, decline to serve the customer. Swearing at, or getting into fights with customers will be considered cause for summary dismissal. The aid of the police may and should be invoked to keep order. In aggravated cases, complaint to this office will result in recommendation that the commissary privilege be withdrawn from the offender.

Be sure that your men know their stock. Transfer them from department to department, and teach them prices and selling methods until you have a mobile force that you can swing from one counter or department to another from hour to hour as the volume of your business may demand. Train your office clerks in the same manner, so that in the busy season every man in the store can and will be used to sell goods, especially during the hours of from 11 to 1, and 5 to 7, when the silver employees make the bulk of their purchases.

The greater part of the force are West Indians and naturally imitative. If the storekeeper is alert all the time, bright, snappy, and obliging, his men will follow him. If he is discourteous, inefficient, and negligent, they will be the same. Your personality and your energy, or lack of it, will be reflected in your force.

Orders in Case Lots.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., June 29, 1914.

CIRCULAR No. 577:

Chief stewards—Hereafter, chief stewards will make requests for case lots on the depot commissary, transmitting same through the local commissaries. These requests for case lots should be placed about every 10 days, and, if practicable, the date of delivery should correspond to date of local commissary solid car shipment, so that the quantity ordered by hotels may be taken in consideration by the commissary storekeeper when placing solid carload orders. The depot commissary in filling case lot orders from chief stewards, will supply barrel goods in bulk only and tin goods in the large r

sizes. Please make the necessary arrangements with local commissary storekeeper.

F. O. WHITLOCK,
Assistant Chief Quartermaster.

Price of Beef.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., June 22, 1914.

CIRCULAR No. 137-1:

HINDQUARTER.

(Average weight 187 pounds.)

		Present selling price
	No. 1.	
Suet.....	28 lbs. at .03	\$.84
Soup meat.....	18 1/2 lbs. at .07	1.28

Soup.....	12 lbs. at .07	.84
Bones.....	6 lbs. at .005	.03
Total forequarter.....	203 lbs.	\$31.36
Total selling price, hindquarters.....		\$26.27
Total selling price, forequarters.....		31.36
Total selling price.....		\$57.63

COST ON DOCK, COLON.

Hindquarters, 187 pounds at 15 cents.....	28.05
Forequarters, 203 pounds at 14 cents.....	28.42

Total cost, 390 pounds.....	\$56.47
Excess of selling price over cost on dock.....	\$1.16

The above table gives the average weight of a hindquarter and forequarter of beef as received under the present contract with the various classes of cuts, and the present cost and selling prices, the cost being the actual cost of the beef delivered on the dock at Colon.

A half carcass of meat weighing 390 pounds costs \$56.47 on the dock at Colon, and sells at the present prices for \$57.63, leaving \$1.16, or approximately one quarter of a cent per pound to cover handling at Colon, refrigeration, freight on the Isthmus, cutting up in the retail commissaries, waste in delivery, and cost of delivery to the houses of employees. This service costs considerably more than this, and there is a loss on every pound of beef now sold, even at the present prices.

In 1908, when beef cost less in the United States, the retail prices in the commissaries were more than at present; the reduction was obtained by raising prices on other commodities. Later on, it may be possible to procure the present grade of beef from the United States for less than the prevailing prices.

Commissary Hours.

The commissary stores are open during the following hours: From 8 a. m., to 12.30 p. m., and 3 to 6.30 p. m.

The gold departments of the Cristobal store will open at 2 p. m., on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open until 7 p. m.

Cold Storage Prices.

Retail prices of cold storage provisions for the week beginning July 2, 1914:

	Price.
FRESH MEATS.	
Mutton—Stewing, per pound.....	8

* Indicates advance from preceding list.

† Indicates reduction from preceding list.

**Indicates 5 cents allowed for return of bottle.

†Sold only from commissaries; no orders taken for delivery.

§Sold only from cold storage and not from commissaries.

Porterhouse roast includes any cut of hind quarter down to rump, and will not be cut if orders for steak will consume the supply.

Tenderloins on porterhouse will not be cut and sold separately.

Not less than ½ ham or ½ shoulders of fresh pork will be sold.

Daily cold storage orders will be filed and kept for at least one month.

Rainfall, June 1 to June 27, 1914, Inclusive.

EMPIRE, C. Z., June 24, 1914.

CIRCULAR No. 63:

All concerned—Effective June 24, 1914, First Lieut. A. H. Acher, assistant engineer in charge of fortification work on the Isthmus, is designated an accountable official of The Panama Canal, vice First Lieut. Geo. R. Goethals.

H. A. A. SMITH,
Auditor, The Panama Canal.
Approved: GEO. W. GOETHALS,
Governor.

Concerning Silver Employees Living on West Bank of Canal.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., June 15, 1914.

TO ALL CONCERNED:

Effective July 1, 1914, heads of departments and divisions, in making reduction of force on the silver roll, should, other things being equal, select for discharge those employees who live on the west bank of the Canal between Rio Grande and Las Cascadas, who use the labor trains that run between Empire and the Pacific end of the Canal. This action is necessary to accelerate depopulating the settlements on the west bank of the Canal.

GEO. W. GOETHALS,
Governor.

Issuance of Force Reports.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., June 17, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

Effective June 17, the force reports heretofore issued weekly will be issued semimonthly, showing the force on the second and fourth Wednesdays of each month. The data for all departments and divisions, except the accounting departments and the Panama railroad, will be compiled by the timekeeping bureau, Executive Department, and all offices, except those mentioned, may cease to send in the weekly reports.

GEO. W. GOETHALS,
Governor.

Balboa Dumps and Naos Island Breakwater.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 29, 1914.

CIRCULAR No. 600-17:

Effective July 1, 1914, all work on the Balboa dumps and the Naos Island breakwater will be placed in charge of Mr. Will B. Casey, general foreman, reporting to Civil Engineer Harry H. Rousseau, U. S. N., Engineer of Terminal Construction.

GEO. W. GOETHALS,
Governor.

Time Books, Metal Checks, Commissary and Hotel Books.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 24, 1914.

CIRCULAR No. 663-1:

FOUR-DAY-PERIOD TIME BOOKS.

1. The new 4-day-period time books will be used effective July 1, 1914.

2. The following books are available, and a supply of the proper form will be delivered by the chief timekeeper for use:

First period—1 to 4, 9 to 12, etc. Form A-72, a 60-line book; Form A-74, a 120-line book; Form A-76, a 3-shift book.

Second period—5 to 8, 13 to 16, etc. Form A-73, a 60-line book; Form A-75, a 120-line book; Form A-77, a 3-shift book.

3. The books for gold and silver gangs are the same, and the word "Gold" must be written or stamped on all books for gold employees.

4. Time books must be kept on the job during each 4-day-period and then sent immediately to the timekeeping office.

5. Entries of time should be made in the same manner as required for the old odd and even day time books, and in accordance with the instructions printed in the back of each book.

6. The labor distribution pages in the back of the book will not be used until further instructions are issued.

7. Field timekeepers and foremen will make no entries in the space under "Pay number."

8. The name of each employee and his rate of pay will be written on the first line of the double space, the occupation below. The old metal check number will

be written opposite the occupation, and the number of the new metal check, which is to be issued, will be written above the old metal check number and opposite the employee's name.

9. The 3-shift books are to be used only when expressly authorized, for gangs operating in shifts. The names of all employees will be entered in the book regardless of the shift they are in, keeping each shift by itself as much as possible, but care must be taken to enter the time in the spaces provided for the shift in which the man actually works. The pages are marked "Regular shift," "Second shift," and "Third shift," and are readily distinguishable by the ink used in printing.

METAL CHECKS.

10. Checks up to No. 19,999 are reserved for gold employees. Checks from 20,000 upward will be given to silver employees. There will be no preferred checks for silver employees, but, as far as practicable, a different series will be assigned to each division or department.

11. The new metal checks will be delivered by the Auditor to the offices in which the time books are written up.

12. New metal checks will be assigned to all employees and the numbers entered in both the first and second period time books when they are written up.

13. The metal checks assigned to a gang as shown by the time books will be sent out on the work with the first period time book and delivered by the foreman or outside timekeeper, who will be held responsible for delivery of the checks to the right persons.

14. The old metal checks are not to be taken up when the checks of the new series are issued. The new metal checks will be taken up by the paymaster when paying a time voucher issued on termination of service.

15. The metal checks and the time books must be on the work on July 1.

COMMISSARY BOOKS.

16. Paragraphs 4, 5, 9, and 10 of Circular No. 663, dated April 1, 1914, are modified by the following rules: Commissary coupon books of the \$2.50 denomination will be provided for sale and for issue to silver employees. Not to exceed two books in any one month will be issued for pay roll deduction.

17. Commissary books of all denominations will be sold to silver employees for cash. Application will be made to foremen for an authorization card, Form P. C. 478, which authorizes the sale of commissary books to the value of \$15. The foreman will complete the card, sign the same and forward it to the time office for validation with the time books. The roll keeper will check the cards to ascertain if the applicants are employees, after which they will be validated by an issuing clerk and returned to the foreman for delivery.

18. Foremen will be held responsible for issuing one card only each month to an employee. Selling agents will punch the card to show the value of books sold.

19. The chief timekeeper will furnish the first supply of cards. Thereafter, requests for cards should be forwarded to the field offices.

20. Commissary coupon books will be issued for pay roll deduction from the 7th of the month to the 26th, inclusive. Books may be ordered at any time, requests therefor being entered in the space provided in the time books for the purpose.

21. The delivery of books will be made on the 7th, 11th, 15th, 19th, 23d, and 26th of each month, except when these dates fall on Sundays or holidays, in which cases, issues will be made on the day following.

22. The No. 2 coupon must not be torn from books until time of actual delivery, and the name of the person actually making delivery must appear on this coupon.

HOTEL BOOKS.

23. Paragraph 5 of Circular 663 is changed to read, as follows:

(a) Hotel books will be issued to all gold employees and white employees carried on the silver rolls, and to such nonemployees as may be authorized by the Governor.

(b) The \$4.80 books may be issued to the following parties:

1. To new employees arriving from the United States to whom one book may be issued, and to new employees appointed on the Isthmus after they have earned a sufficient amount to cover value of book.

2. To married employees occupying family quarters, and employees boarding at regular messes, who are detailed for duty away from their official station.

3. The \$4.80 hotel books which have been issued to new employees who do not render any service and therefore, are not entitled to transit time, will be charged to recruiting.

4. All requests for the issue of \$4.80 hotel books must be approved by the head of the department or division in which the applicant is employed.

24. Requests for hotel books should be entered in the time books in the space provided for requests for commissary books. These requests must be clearly marked with the letters "H. B." so as to indicate that hotel books are desired.

25. Both hotel and commissary books will be sold to

gold employes upon presentation of the new "Panama Canal" brass checks to sales agents.

GEO. W. GOETHALS,
Governor.

Acting General Foreman, Balboa Shops.

THE PANAMA CANAL,
MECHANICAL DIVISION,
BALBOA, C. Z., June 29, 1914.

ALL CONCERNED—During the absence on leave of Mr. S. G. Shearer, general foreman of the machine department of Balboa shops, Mr. C. S. Perry is designated as acting general foreman.

J. J. EASON, Ass't. Superintendent,
Mechanical Division.

APPROVED:

D. C. NUTTING,
Superintendent, Mechanical Division.

Telephones.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., April 1, 1914.

CIRCULAR No. 650:

1. Telephones will be installed in offices and private residences for the transaction of official business, cost of installation, changes, additions, and removals being borne by the division or department making the work request.

2. The telephone instrument and its necessary accessories are to remain the property of the Panama railroad at all times.

3. Personal calls must not be made between the hours of 7 a. m. and 12 noon, and between 1 p. m. and 5 p. m., except in cases of emergency.

4. Telephones for private use will be installed upon approval by the superintendent of the Panama railroad, and will be classed as A and B.

5. A monthly charge of \$2.50, United States currency, will be made for Class A telephones, and this service will cover local calls that pass through the home exchange only. An additional charge of 25 cents, United States currency, will be made for all calls going to another exchange.

6. A monthly charge of \$7.50, United States currency, will be made for Class B telephones, and this service will cover business to any other exchange on the Panama railroad telephone system.

7. The subscriber for telephones of Class A and Class B shall pay for installation, changes, or removal of telephone.

8. Calls from Class A and B telephones will be limited to five minutes between the hours of 7 a. m. and 12 noon, and between 1 p. m. and 5 p. m., except on Sundays and holidays.

9. Telephones at the Hotel Tivoli, Hotel Washington, and at railroad stations, will be maintained on a strictly pay station basis, except that holders of telephone franks may use such telephones on official business, by giving the operator on duty their name and the number of their frank. Such franks will also permit the holder to call subscribers on the Panama railroad telephone system from the telephones of the Isthmian Telephone Company, and the Cia. de Teléfonos de

Panamá, provided he gives the operator his name and frank number.

GEO. W. GOETHALS,
Governor.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending July 11, 1914:

DATE.	Low		High		Low	
	A.M.	P.M.	A.M.	P.M.	A.M.	P.M.
July 5.....	5.10	7.21	1.10	1.27	7.56

Northward main line trains, excepting No. 140 and 156, will wait at Pedro Miguel Jct., for southward Las Cascadas branch trains.

Northward Las Cascadas branch trains, excepting No. 180, will wait at Pedro Miguel Junction, for southward main line trains.

Nos. 181 and 140 will carry members of Infantry only from Las Cascadas.

Nos. 141, 146, 147, 156, and 157 will carry first-class passengers only.

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

GENERAL.

The schedule for the moving picture shows for the week July 6 to 11 is, as follows: Monday, Pedro Miguel, Tuesday, Empire and Balboa; Wednesday, Corozal; Thursday, Gatun; Friday, Culebra; Saturday, Cristobal.

BALBOA.

The moving picture machine, formerly used at Porto Bello, has been repaired and installed for permanent use at the Balboa clubhouse. Moving picture shows are held every Tuesday night at 8 p. m. sharp.

A large blackboard has been received for the use of the Spanish class.

Seven Morris chairs, with covers, have been received for the reading room; also, an umbrella rack for the lobby.

COROZAL.

The barber shop service has been improved.

The high scores on the bowling alleys for the past week were, as follows:

Tenpins—Thirsk, 234; 220, 219, 210; Boesen, 219, 210, 208; Parkis, 209, 205.

Duckpins—Harper, 111, 105; Boesen, 110; Orr, 106; Roberts, 104; Webb, 101.

PEDRO MIGUEL.

The Tenth Infantry band gave a concert to the people of Pedro Miguel on Tuesday evening, June 23.

About 60 people attended the song service held on Sunday evening, June 28. In order to popularize these services, an effort will be made to organize a Christian Endeavor society, and a meeting for the purpose has been called for Sunday evening, July 5. All interested are requested to be present and lend their aid to the movement.

The people of Pedro Miguel gave a reception to Mr. and Mrs. Russell on Wednesday evening, June 24. There was a program of music by Gray's orchestra and local residents, followed by refreshments.

High scores in duckpins for the month were made by Mr. Piper, 106, and by Mr. Vandeburgh, 104.

A duckpin match was rolled off on the local alley on Friday evening between the married men of Corozal and the married men of Pedro Miguel. The results were, as follows:

Corozal... 457 432 458 Pedro Miguel 415 447 425
The first games of the local pool tournament were played off on Saturday evening.

CULEBRA.

The following high scores were rolled off on the local alleys during the past week:

Tenpins—Bliss, 203; Barnes, 201.
Duckpins—Bliss, 104; Phillips, 103; Warner, Jr., 102, 102.

In the handicap pool tournament recently closed, Barnes (scratch) won first place, and Cook won second.

Arrangements are being made to have the Gatun pool, billiard and bowling teams play return matches with the local teams on Saturday night, July 11.

GATUN.

The Tenth Infantry band gave a concert in front of the clubhouse on Friday evening, June 26.

"Open house" was observed at the Gatun clubhouse on Saturday evening, June 27. Prochaska's orchestra played during the evening. Gatun took all three games of *tenpins* from Culebra, and the results of the pool and billiard contest were:

Pool—Gatun 964 points; Culebra, 659 points.
Billiards—Gatun, 100 points; Culebra, 70 points.
Corozal defeated Gatun in a game of baseball; score, 21 to 3. The batteries were: Gatun—Loutan, Thompson, and Duestheimer. Corozal—Duer and Ridge. Refreshments were served during the evening.

Gatun has been playing Cristobal a series of four indoor baseball games. The Gatun team won three out of the four played.

The Gatun Y. M. C. A. has entered perhaps a larger number of names in the Fourth of July athletic meet than any of the other clubs on the Isthmus. About 50 men have been signed up.

CRISTOBAL.

The "Doves" defeated the "Giants" in a game of indoor baseball, on June 23, by a score of 20 to 19.

Gatun won the championship of the Atlantic end of the Isthmus by defeating Cristobal, 18 to 14, at indoor baseball, on Wednesday, June 24.

D. Raymond and Miss Gay Butler won first place in the single folks duckpin tournament, on June 24. It required a roll-off, however, to decide the contest between D. Raymond and Miss Butler, and Mr. Smith and Miss Vickery. The winning score was 434.

The monthly married folks bowling tournament will be held on Monday, July 13.

An all-star duckpin elimination tournament is planned for Saturday, July 11, at Cristobal.

High score in duckpins for the week were: Smith, 121; Gill, 107, Quinn, 104; Grover, 103; Cotton, 103;

Pinney, 102; Steele, 102, Peterson, 101.

The debate on the Colombian Treaty, between Messrs. Hipp and Rigney, before the discussion club on June 25, showed careful preparation on both sides. The talks following the debate seemed to indicate that most of those present were not in favor of an indemnity to Colombia.

Supplies for the Canal.

The following steamers with supplies for The Panama Canal and Panama Railroad Company arrived at the ports of Colon, Cristobal, and Balboa during the two weeks ending June 27, 1914:

Astea, June 14, from San Francisco, with 17 coils manila rope, for stock.

Prinz Joachim, June 15, from New York, with 120 barrels carbolium, for Division of Terminal Construction; 133 coils manila rope, for stock.

Origen, June 16, from Mobile, with 500 cases turpentine, 200 drums gasoline, for stock.

Advance, June 16, from New York, with 20 cases machinery, for municipal division; 60 rolls reinforcement wire, for Supply Department; 233 bundles reinforcing steel, for Fortification Division; 6,125 pieces hollow tile, 17 cases concrete mixer machinery, for permanent buildings; 62 cases iron lockers, for Mechanical Division; 342 bales hay, 140 boxes rubber hose, 1,000 kegs spikes, 214 kegs bolts, 79 boxes bolts, 185 boxes window glass, 241 bundles galvanized pipe, 251 pieces galvanized pipe, 256 boxes soap, 40 coils manila rope, 905 bales hay, for stock; and a miscellaneous cargo, the whole consisting of 10,570 packages weighing approximately 549 tons.

Cartago, June 17, from New Orleans, with 620 barrels paving brick, 23 reels cable, for Panama Railroad Company; 16,608 board feet oak lumber, for Mechanical Division.

Santa Marta, June 17, from New York, with 16 cases steel doors, for Fortification Division; 100 cases asphaltum varnish, for stock.

Abangarez, June 18, from New Orleans, with 123 boxes window and door frames, etc., for Division of Erection.

Calamares, June 19, from New York, with 34 packages electrical material, for Fortification Division; 86 kegs bolts, for stock.

Santa Clara, June 19, from San Francisco, with 106,040 board feet redwood lumber, for Mechanical Division; 20 pieces piling, untreated, for Division of Terminal Construction; 2,051,573 board feet fir lumber, 150,171 board feet redwood lumber; 2,707 sacks oats, for stock.

Panama, June 21, from New York, with seven fender chains, 16 crates, two boxes window material, for Division of Erection; 90 rolls roofing paper, for permanent buildings; 100 rolls insulating paper, 800 bags oats 42 boxes bronze wire cloth, 97 drums lubricating oil, 50 cases lubricating oil, 300 cases linseed oil, 64 crates valves, for stock; and a miscellaneous cargo, the whole consisting of 1,985 packages, weighing approximately 163 tons.

Prinz Eitel Friedrich, June 23, from New York, with 87 bundles reinforcing rods, for Division of Terminal Construction.

Harry T. Inge, June 19, from Galveston, with 296,840 board feet yellow pine lumber, for stock; 176,590 board feet yellow pine lumber, crosoted, for Fortification Division.

Norian, June 23, from Liverpool, with 155 barrels carboic acid, for stock.

Inverclyde, June 23, from Gulfport, with 365,411 board feet yellow pine lumber, 40 cases benzine, for stock.

Olif, June 23, from Fernandina, with 9,991 board feet cypress lumber, 1,810,512 board feet yellow pine lumber, for stock.

Heredia, June 24, from New Orleans, with 106 barrels paving brick, for Panama railroad; 953 crates fire brick, for stock.

Metapan, June 24, from New York, with 550 pieces Natco tile, for permanent buildings; 24 packages electrical material, for Mechanical Division; 100 pieces angles, 48 pieces beams, for stock.

Atenas, June 25, from New Orleans, with 45,393 board feet yellow pine lumber, 12,509 board feet oak lumber, for Mechanical Division; 39 reels cable, for Panama Railroad Company; 100 pieces piling, untreated, 517 bales straw, for stock.

Carisbrook, June 26, from Gulfport, with 33 pieces piling, untreated, for Division of Terminal Construction; 396 pieces piling, untreated, for stock.

Pastores, June 26, from New York, with 27 packages structural material, 17 packages lighting fixtures, for Fortification Division; 350 kegs paint, 60 kegs zinc oxide, 22 bundles conduit pipe, 300 pieces conduit pipe, for stock.

Allianca, June 26, from New York, with 135 rolls asphalt felt, 50 cases woodwork, 153 cases marble 25 barrels pitch, 107 barrels enameled brick, for permanent buildings; 15 boxes glass shades, 48 dry kiln trucks, 109 packages toilet fixtures, for Mechanical Division; 60 cases machinery, four skids, for Fortification Division; four fender chains, for Division of Erection; 35 barrels alcohol, 16 cases brass rods, 300 kegs nails, 60 kegs bolts, 20 kegs rivets, 50 boxes washers, 22 cases batteries, 10,000 pieces fibre conduit pipe, for stock; and a miscellaneous cargo, the whole consisting of 11,847 packages, weighing approximately 286 tons.

MOVEMENTS OF OCEAN VESSELS.

The following is a list of sailings and scheduled arrivals of the Panama Railroad Steamship Line; of the Royal Mail Steam Packet Company; of the Hamburg-American Line, and of the United Fruit Company's Line:

Panama Railroad Company's steamers sail from Piers 8, 9, and 11, Cristobal, at 3 p. m.

Royal Mail steamers leave for New York on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct, leave on Thursdays at 3 p. m., for New Orleans, via Boca del Toro and Havana, on Thursdays at 4 p. m.; for New York direct, on Wednesdays at 2 p. m.; ships for New York, via Kingston, on Thursdays at 2 p. m.; for Limon and Boca del Toro on Saturdays at 4 p. m.; and for Limon direct on Saturdays at 5 p. m.

The Hamburg-American steamers *Prinz Eitel Friedrich* and *Prinz Sigismund* sail for New York, via Kingston and Fortune Island, on Sundays at 2 p. m.; the *Prinz August Wilhelm* and *Prinz Joachim* sail for New York, via Kingston, Santiago de Cuba, and Fortune Island, on Tuesdays at 10 a. m.

CANAL

RECORD

Volume VII.

ANCON, CANAL ZONE, WEDNESDAY, JULY 8, 1914.

No. 46.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications.

THE CANAL RECORD.

Ancon, Canal Zone,

Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Temporary Arrangement for Supplying Coal to Vessels Using the Canal.

In order to supply coal to vessels using the Canal before the permanent coaling plants at the terminals are ready for service, the Panama Railroad Company is constructing a temporary wharf at the north end of Dock 13, Cristobal. The coal will be chuted from dump cars into lighters, as is done at the Dredging Division's coal wharf at Paraiso, and the lighters will be towed alongside the ships, which will coal by means of their own tackle. The dump cars will be loaded by the Brown hoist alongside the approach to the Mount Hope dry dock. It is estimated that 40,000 tons a month can be supplied to shipping without interfering with the supply for the Canal and the railroad.

The coal wharf will be 56 feet wide by 150 feet long, and will be reached by a 300-foot trestle, running from the end of Dock 13 to deep water in the French canal. The wharf will be built on new piles, with its superstructure of second-hand lumber taken from storage; the approach trestle will be of second-hand lumber, and will use piles recovered from the former bridge No. 57½, crossing the Canal at Paraiso. The total estimated cost is \$13,553.98.

Progress on Cristobal Terminals.

Dock No. 9 at Cristobal was completed in the afternoon of July 7, when the last smoothing work was done on the interior of the five south bays.

The work begun on June 5, of driving the first of a series of four trestles to extend from the Cristobal terminal mole over the site of the proposed additional pier No. 7, in preparation for the sinking of caissons, has been advanced at an average rate of five bents per working day. To the evening of July 7, about 25 per cent of the required total of 4,800 feet of trestle had been driven.

The last of the roof trusses for the ad-

joining new dock, No. 10, were placed at its east end, adjoining the end of Pier 11, on May 29, and it is expected that this structure will be completed about August 1. The roof for No. 10 was completed on June 27. The walls along the water side of the wharf and on the land side have been built, and are being finished off. The erection of the unloader masts along the face of the wharf was begun as soon as the locomotive crane, which had been used in lifting the roof trusses to their places, could be spared, and has been completed. The remaining work includes erecting and painting 11 steel doors, 90 per cent of the concrete protection for the roof trusses, waterproofing the roof, laying 2,900 square yards of paving, and placing 50 fender piles.

Restoration of Automatic Signals.

Automatic signals Nos. 812, 857, 934, and 995, on the main line of the Panama railroad between Quebrancha siding and Gatun, were replaced in service on Thursday, July 2. They had been out of service since 3 a. m., on June 24, at which time they were demolished by the beams of a piledriver which swung loose while in transit in a northbound extra freight train.

Work of American Dipper Dredges.

A comparison of the work of the American dipper dredges *Chagres*, *Mindi*, and *Cardenas*, for the first five months of this year, with similar periods for the years 1911, 1912, and 1913, shows that the output of the two first mentioned dredges so far in 1914 has been increased very materially, notwithstanding the fact that this year these dredges have been working on an 8-hour shift, instead of on a 10-hour shift, as formerly. The dredge *Cardenas* made a high record for the first five months in 1911, but fell off in 1912 and 1913; the output for the first five months in 1914 was only 49,939 cubic yards less than in 1911. The *Chagres* and *Mindi* were operated up to April 1 by the same crews that operated them on the Atlantic side. The record of the three dredges for the first five months periods for the years abovementioned is, as follows:

Dredge.	1911.	1912.	1913.	1914.
	Cu. Yds.	Cu. Yds.	Cu. Yds.	Cu. Yds.
<i>Chagres</i>	179,253	167,947	193,336	290,996
<i>Mindi</i>	141,409	117,712	100,856	247,502
<i>Cardenas</i>	323,765	121,171*	*93,104	273,826

**Cardenas* on single shift 1912 and 1913.

The increased output for each of the dredges for the first five months of 1914 over the mean output of the first five months periods of the years 1911, 1912, and 1913, was:

Dredge.	Mean of three years.	1914.	Per cent increase.
	Cu. Yds.	Cu. Yds.	
<i>Chagres</i> ..	180,179	290,996	61.5
<i>Mindi</i>	119,992	247,502	106.3
<i>Cardenas</i>	250,772*	273,826	9.2

*In computing this mean the actual figures for 1912

and 1913 have been doubled to reduce to an equivalent 2-shift basis.

The percentage of increase or decrease in output shown by each of the dredges for the five months of 1914, as compared with the highest output for the first five months of the previous three years is, as follows:

Dredge.	Previous high year.	1914.	Per cent increase.	Per cent decrease.
	Cu. Yds.	Cu. Yds.		
<i>Chagres</i> ..	193,336 (1913)	290,996	50.5
<i>Mindi</i> ..	141,409 (1911)	247,502	75.0
<i>Cardenas</i> ..	323,765 (1911)	273,826	15.4

The dipper dredge *Chagres* was built by the Atlantic, Gulf, and Pacific Company at a cost of \$102,500, and was delivered on the Isthmus on February 10, 1908. Its twin, the dipper dredge *Cardenas*, was built under the same contract. Its length is 110 feet, breadth, 38 feet, depth 11 feet, and it is equipped with a 5-yard dipper to dig to 45 feet. The *Mindi* was constructed by the Featherstone Foundry and Machine Company at a cost of \$100,000, and was delivered on the Isthmus on December 2, 1907. It is of the same capacity, and its specifications vary but little from the *Chagres*. With the exception of time off for necessary repairs, the *Chagres* and the *Mindi* were in continuous service on the Atlantic side up to October 22, 1913, when they were transferred to the Culebra Cut section.

The *Cardenas* was transferred to Culebra Cut from the Pacific entrance on December 15, 1913.

Extension to Panama Tramways Completed.

The extension of the Panama tramway system from a point near the East Balboa commissary to the Panama railroad steel pier at Balboa was completed and turned over to the street railway company by the contractor, R. W. Hebard and Company, Incorporated, on Thursday, June 15. Street cars were operated over the extension for the first time on the following day, but until the improvement work on the continuation of B street, which necessitates the transfer of passengers, is completed, the company will not be able to maintain a regular schedule. The original contract covered the construction of the line to the Panama railroad wharves, but owing to delays, due principally to the crossing of the railroad tracks, between East Balboa and the wharves, it was terminated, and a supplemental contract was entered into later, covering the extension. The work performed by the contractor under this supplemental contract included the laying of 4,800 feet of route, 3,700 feet of which was double track, and the installation of seven crossovers. The crossovers were made by a Cincinnati firm from a special design furnished by the contractor, and were placed, as follows: Four where the line crosses The Panama Canal tracks to the East Balboa dump; one near the La Boca silver camp, where there is a temporary railroad track for delivering cars loaded with building materials for the houses

to be erected in that settlement; and two west of the La Boca silver commissary, where The Panama Canal tracks extend out over the Naos Island breakwater. All of the railroad tracks, with the exception of the two last mentioned, will probably be removed in time. The tramway extension, in general, parallels the front street in the silver settlement, and this part of the line is double-tracked, with the trolley poles in the space between the two tracks. The double track ends near the silver commissary, and the single track at the office of the Pacific Steam Navigation Company.

The above work completes the system as originally planned, but it is proposed to double-track all of the line outside of city limits later. Furthermore, the abandonment of the old Panama railroad wharves at Balboa will, in time, cause a change in the present route after it leaves the silver commissary, in order to serve the new docks, shops, and the Balboa townsite. The system now comprises a little over 10 miles of trackage. The steepest grade on the entire line is on East Thirteenth street, where it is 7.4 per cent; the steepest grade on the new extension is that between the silver commissary and the wharves, which approximates four per cent. The total construction cost of the system to date is about \$500,000.

Anticipating an increase in business due to the extension of the line, and to the continued building up of the eastern part of the city, the tramways company ordered seven additional cars recently, which, when received, will make a total of 23 in the service. To date, all of the new cars have arrived, and most of them have been placed in operation. The added equipment will permit the company to operate its cars on a more frequent schedule. On the Balboa line, it is proposed to run a car to the wharves every nine minutes. Effective Saturday, July 11, cars will be operated from Ancon to Balboa, and from the National Palace to Bella Vista and Las Sabanas, instead of from the National Palace to Ancon, and Balboa to Bella Vista, and Las Sabanas, as at present. This change, it is announced, will be permanent.

The entire electrical equipment, as well as the trucks of the 15 original passenger cars, is being replaced by equipment similar to that on the new cars. It is expected to have all changes completed by August 1. The traffic shows a considerable fluctuation; it is greatest during the week following the Canal pay day, and smallest toward the end of the month. The traffic on the Balboa line is the most important at present, and is steadily increasing. The largest number of passengers carried on any one day to date is 15,000, on Sunday, April 12. The greatest number of 5-cent fares collected during any one day to date is 19,500; this was on April 12, also.

Rates on United Fruit Company's Vessels.

The United Fruit Company advises that, effective June 15, the rate via direct line sailing Wednesdays from Colon to New York will be \$56.25, without meals, in staterooms without bath. The rates for children via all of their lines, will be half fare for children three to 12 years of age; one child under three years, not occupying berth in stateroom or seat at table, free; each additional child under three years, half fare.

An old spearhead has been found by A. M. Butcher of Gatun embedded at a depth of

about 15 feet in the spillway channel. It was turned over by him to the Governor's office for preservation with other relics of the Canal.

Area Along Velasquez River to be Vacated.

A settlement has been effected with the squatters on property along the Velasquez River, west of the Canal and north of Balboa, and the houses in this area will be destroyed. The port of Cochinito is within this territory, and in view of the fact that the two or three houses there are desired for use by the people of Arraijan for storing supplies and building materials in going to and returning from Panama, permission has been granted by the Governor to retain them until further notice.

PERSONAL.

Lieut. C. W. Fisher, Jr., U. S. N., formerly superintendent of erection in the Mechanical Division, has been transferred for duty in the United States, and sailed for New York on the *Panama* on Sunday, June 28, accompanied by Mrs. Fisher, and his mother-in-law, Mrs. M. S. Gielow.

Mr. W. M. Baxter, Jr., who has been in the Canal service since March, 1911, and who has been employed jointly by The Panama Canal and the Panama Railroad Company since February, 1912, as the official guide and lecturer for parties visiting the Canal, resigned, effective June 15, to enter the employ to The L. E. Myers Construction Company of Chicago, who are building, on a large scale, a complete working model of The Panama Canal, as an exhibit at the International Panama-Pacific Exposition at San Francisco. Mr. Baxter will remain on the Isthmus for one or two months longer collecting data for the exhibit, and will then report to the company's office to assist further in working up the plans.

Civil Service Examination.

Examination will be held, probably on July 26, for the position of mechanical draftsman in The Panama Canal Service. Applications will not be received after July 13; this date may be changed if necessary. The place and date of examination should be omitted in application forms. A card of admission will be sent to those found eligible to be admitted, just before the examination.

ISTHMIAN CIVIL SERVICE BOARD.

CULEBRA, C. Z., July 7, 1914.

Missing Men.

Any one having information regarding the present whereabouts of Mr. Edmund A. Robins, who is supposed to be on the Isthmus

Estates Being Settled.

The following estates of deceased or insane employes of The Panama Canal or the Panama Railroad Company are now in process of settlement by this office, and any claims against these estates, or any information which might lead to the location of heirs, or to the recovery of property, bank deposits,

of Panama, is requested to communicate with the American Legation, Panama.

Anyone having information regarding the whereabouts of Mr. John J. Fox, who is supposed to be on the Isthmus of Panama, is requested to communicate with Mrs. Lena J. Fox, No. 488 Spring street, Buffalo, N. Y.

Independent Order of Odd Fellows.

The sovereign grand sire of the Independent Order of Odd Fellows has approved the transfer of the meeting place of Gatun lodge, No. 5, from Gatun to Cristobal. The regular meetings will be held on Friday of each week, in the lodge hall, building No. 1, Cristobal. On Friday evening, July 17, the installation of officers for the second term of 1914 will take place. All Odd Fellows on the Isthmus are invited to attend. Refreshments will be served after the meeting.

Obituary.

Gordon, the infant son of Mr. and Mrs. John Baty of Ancon, died in Ancon Hospital on July 3, aged six months.

Order of Railroad Telegraphers.

There will be a regular meeting of Panama Railroad Division, No. 158, Order of Railroad Telegraphers, on Saturday, July 11, at Moose Hall, Hotel Normandie, Panama, at 8 p. m. All operators are requested to attend.

JOHN F. STAHL,
Secretary-Treasurer.

Cristobal Dancing Club.

The Cristobal Dancing Club will hold a "Hard time dance" on Saturday, July 11. All members are requested to dress accordingly.

Pedro Miguel Dancing Club.

The Pedro Miguel Dancing Club will hold its first dance for July at the Pedro Miguel clubhouse, on Saturday evening, July 11.

GEORGE R. WARD, Acting Secretary.

PARAISO, C. Z., July 7, 1914.

Permission has been granted the inhabitants of the native village of Chagres, situated on right or eastern bank of the river of that name, near the ruins of Fort San Lorenzo, to cross the locks at Gatun, and carry on their customary trading with Colon.

Lost—In the ladies' retiring room (on wash stand) aboard the Panama railroad steamship *Colon* at Cristobal on the afternoon of July 4, about 2.45 o'clock, two diamond rings, one, a 1-k. in Tiffany mounting, the other, a 1-k. flower mounting; and one wedding ring (Tiffany) with the following inscription: "F. P. H. to E. C. H., May 19, '13." The sum of \$50, United States currency, will be given to the finder if the rings are returned to Mrs. F. P. Hall, Gatun, C. Z.

postal savings or postal money order deposits, or any other moneys due them, should be presented at this office at once, in order that the estate may be settled as soon as possible. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once:

Leonidas Segura	18588	Peru	Panama	First Division	June 26.

THE 1914 FOURTH OF JULY.

Over 5,000 People at Celebration at Cristobal—Result of Contests.

The celebration of the Fourth of July at Cristobal by The Panama Canal force was carried out according to program. The day was pleasant up to about 3.30 p. m., when rain began to fall. By that time, however, all of the aquatic and field events had been held, with the exception of the children's races, which were transferred to the interior of Dock 9. Roosevelt avenue, the fire station, the police station, the United Fruit Company's new building, and Dock 9 were appropriately decorated with flags and bunting; many of the places of business along Front street in Colon had special displays, and some of the automobiles and carriages were half hidden in the national colors. A decorated arch formed the entrance to the dock enclosure. At night, the varicolored electric lights strung along Roosevelt avenue were quite effective.

The conveniences provided for the visitors were unusually complete. No conveyances were permitted to pass on Roosevelt avenue, and boy scouts and policemen guarded the entrance. Boy scouts distributed programs and furnished information on request. A parcel room was maintained in the United Fruit Company's building in charge of men of the Tenth Infantry, and rest rooms were provided for the women and children. Dock 9 was used for the patriotic exercises, for the distribution of lunches, and for dancing in the afternoon and evening. The crowding which characterized the lunch hours at former celebrations was to a large measure eliminated by the erection of stands separated by narrow passageways through which people were required to walk in single file. As they passed through they were handed the ready prepared lunches, and afterward walked down the dock to another booth where ice cream cones were served. The lunch consisted of two kinds of sandwiches wrapped in oil paper, an apple, also wrapped, and a tin cup of coffee. Each package of sandwiches contained an ice cream ticket. The food supply was ample, and every applicant entitled to the privilege was served.

The total number of 25-cent special excursion tickets sold by the Panama railroad during the day was 4,334.

PATRIOTIC EXERCISES.

The patriotic exercises took place at 11.30 a. m. A speakers' platform had been erected at the east end of Dock 9, and to the right were several tiers of seats reserved for the schoolchildren who took part in the choral singing. Directly in front of the speakers' stand were seated the members of the Tenth Infantry band, and to the left, the members of the Colon municipal and Republican National bands. Among the invited guests who occupied chairs on the platform were President Belisario Porras of Panama, and Mrs. Porras. The Declaration of Independence was read by Judge William H. Jackson, and the address was made by the Hon. William Jennings Price, United States Minister to Panama. The Panama National Hymn was sung by the schoolchildren (words from an English translation), accompanied by the Republican National Band, followed by the "Star Spangled Banner," accompanied by the Tenth Infantry Band. An original selection entitled "Panama, My Panama," and fitted to the air of "Maryland, My Maryland," written by

C. C. Brown, was also sung by the schoolchildren.

ATHLETIC EVENTS.

The official results in the field meet were, as follows:

100-yard dash—First, Levy, Cristobal; second, Hoff, Balboa; third, Lichtner, Coast Artillery. Time, 10 4/5 seconds.

Shot put—First, Riddle, Coast Artillery; second, Del Valle, Coast Artillery; third, Neeson, Cristobal. Distance, 40 feet 10 inches.

880-yard dash—First, Hulsebosch, Balboa; second, Russell, Cristobal; third, Simka, Balboa. Time, two minutes 3 1/5 seconds.

Running high jump—First, Rodriguez, Panama; second, Robinson, Balboa; third, Rose, Culebra. Height five feet six and one quarter inches.

**Boys' 75-yard dash*—First, Pratt, Cristobal; second, Minot Cotton, Cristobal; third, Billett, Cristobal. Time, 8 3/5 seconds.

440-yard dash—First, Anderson, Cristobal; second, Hulsebosch, Balboa; third, Simka, Balboa. Time, 58 1/5 seconds.

Pole vault—First, Rose, Culebra; second, DeCora, Culebra; third, Godwin, Gatun. Height, nine feet nine inches.

**Wall scaling contest*—Won by Tenth Infantry. Time, 19 seconds. Second, Coast Artillery. Time, 25 seconds.

**Tug of war*—First, Coast Artillery; second, Tenth Infantry; third, Gatun.

220-yard dash—First, Hoff, Balboa; second, Levy, Cristobal; third, Quinn, Cristobal. Time, 24 2/5 seconds.

100-yard low hurdles—First, Quinn, Cristobal; second, Stamm, Gatun; third, McEwen, Balboa. Time, 15 3/5 seconds.

**Potato race*—First, Chute, Coast Artillery; second, Farrell, Cristobal; third, Engelke, Empire. Time, 38 seconds.

**Exhibition fire drill, hose laying and coupling contest*—Cristobal won from Empire. Time, one minute nine seconds.

**Three-legged race*—First, Bouche and Weiss, Gatun; second, Golden and Duncan, Culebra-Empire; third, Fraser and Farrell, Cristobal. Time, seven and four-fifths seconds.

**Boys 75-yard relay*—First, Pedro Miguel; second, Cristobal.

One mile relay—First, Coast Artillery; second, Corozal; third, Balboa. Time, four minutes five and one fifth seconds.

Running broad jump—First, Godwin, Gatun; second, Dwelle, Corozal; third, Hoff, Balboa. Distance, 17 feet nine inches.

**Special events.* Entrants in regular events were not allowed in special events.

Balboa won first place with 24 points in the regular track and field events, and Cristobal was second, with 23 points.

AQUATIC EVENTS.

The official results were:

Gasoline boat race—First, Dixie; second, Psyche. *Lifeboat race*—First, Leonidas crew; second, Hannibal crew.

Sailing canoe race—First, L. Foote and A. Paulsen. *Gasoline boat race*—First, Vedette.

Paddling canoe race—First, N. Kaunitz and W. L. Stone; second, J. C. Moons and T. A. Aanstoots; third, W. C. Gardner and L. Foote.

50-yard swimming dash for men—First, D. E. Simons; second, W. A. Fraser; third, B. Alvine.

50-yard swimming race for women—First, Miss M. Stevens; second, Miss D. Hill; third, Miss B. Compton.

50-yard swimming race for boys under 16—First, H. Wardlaw; second, E. L. Green; third, S. McKeown.

50-yard tub race—First, W. Frazer; second, M. Hollowell.

880-yard swimming race for men—First, J. W. Green; second, E. L. Green; third, W. Frazer.

Greased spar contest—First, W. Lillycrop.

60-foot form dive—First, R. Nelson; second, D. V. Raymond; third, J. S. Williams.

One mile swimming race for men—First, F. Hansman; second, J. H. Clayton; third, H. W. Porter.

Fancy diving contest—First, R. Nelson; second, J. A. Hanson; third, S. D. Rousseau.

Aquatic wrestling match—Protested.

100-yard swimming race for men—First, D. Simons; second, P. Simons; third, J. C. Russell.

440-yard swimming race for men—First, J. Bingham; second, J. Hansen; third, A. Mitchell.

Relay swimming race for men—First, E. L. Green, J. Bingham, W. Green, and W. A. Frazer.

CHILDREN'S RACES.

The children's races, on account of rain, took place in the east end of Dock 9; one side of the dock floor was kept cleared for the pur-

pose. The participants evinced considerable interest in the meet, and in view of the short time for practice some good records were made. The winners of first place received a blue badge, second place, a red badge, and third place, a white badge. Each badge bore in addition to a representation of the United States flag, the words "Cristobal, C. Z., Fourth of July celebration, 1914.... (first, second, or third) prize, schoolchildren's athletic meet." The results in the several events were, as follows:

75-pound boys' 60-yard dash—Frank Raymond, Cristobal; first; L. Davis, Cristobal; second; Geo. Smallwood, Ancon; third.

90-pound boys' 75-yard dash—L. Appleton, Cristobal; first; Alson Seers, Cristobal; second; Hugh Sargent, Corozal; third.

110-pound boys' 75-yard dash—S. Engelke, Empire; first; S. McKeown, Cristobal; second; Selkirk Ellenwood, Corozal; third.

130-pound boys' 75-yard dash—J. Loulan, Gatun; first; R. Billett, Cristobal; second; R. Penman, Corozal; third.

75-pound boys' 300-yard relay—Cristobal; first; Empire; second; Corozal; third.

90-pound boys' 300-yard relay—Empire; first; Cristobal; second.

75-pound girls' 50-yard dash—Hazel Mitchell, Corozal; first; May Brugge, Cristobal; second; Helen Huber, Empire; third.

90-pound girls' 50-yard dash—A. Appleton, Cristobal; first; S. Allen, Cristobal; second; J. Wardlaw, Cristobal; third.

110-pound girls' 60-yard dash—B. Glawson, Cristobal; first; R. Farrel, Cristobal; second; M. McKeown, Cristobal; third.

90-pound girls' relay—Cristobal; first; Corozal; second; Empire; third.

110-pound girls' relay—Cristobal; first; Empire; second.

On the basis of points, three for first place, two for second, and one for third, the standing of the towns is, as follows: Cristobal, 42; Corozal, 14; Empire, 12; Gatun, three; Ancon, two.

TENNIS TOURNAMENT.

The results in the tennis tournament held at Cristobal on the Fourth were, as follows:

Finals in doubles—Fechtig and Snyder defeated Smith and Hart, 6-0; 6-2.

Consolation doubles—Shropshire and Ohlson defeated Wechsler and Russell, 6-1; 6-2.

The finals in singles will be played on the Ancon court, on Sunday, July 12.

MISCELLANEOUS EVENTS.

One of the most interesting features of the day's program was the submersion of submarine C-1 in the slip between Dock 9 and Pier 8. The vessel submerged twice, the operation each time consuming only a few minutes.

The fireworks display was held on Pier 8, and had proceeded for about half an hour, when a spark set off a pile of unexploded fireworks inside the dock, causing a blaze which brought out the Cristobal fire department. The fire was extinguished within a short time, and the loss was confined principally to the fireworks and to some canvas and rope belonging to the dock.

The dancing pavilion at the outer end of Dock 9 was well filled at night, both with dancers and spectators. Hundreds of Japanese lanterns were suspended from the ceiling and added effectively to the scene.

Married.

BECKSTED-BROWN—On Monday, July 6, 1914; at the home of Mrs. H. P. Warrick, Cristobal, Miss Gladys Ada Brown of Black River, N. Y., to Mr. Lorne Becksted of Waterloo, N. Y. Canal Zone residence, Cristobal.

FOUND—One watch, chain, and fob. Owner can have same upon proper identification at police and fire headquarters, Ancon.

POWDER MAGAZINE EXPLODES.

Stock of Explosives at Mindi Amounting to Over 450,000 Pounds Totally Destroyed.

The Mindi powder and dynamite magazine maintained by the Supply Department, under the direction of the Depot Quartermaster at Mount Hope, situated at a point near the Gatun-Colon wagon road, about five miles from Colon and two miles from Gatun, was destroyed by an explosion at 9.20 a. m., on Sunday, July 5, together with its contents, consisting of 435,525 pounds of dynamite, and 15,394 pounds of Trojan powder.

The day watchman, a West Indian named Gilbert Wint, was instantly killed, and his body was found shortly after the accident lying in the bush about 72 paces distant from the magazine. The family of the night watchman, a West Indian named James Richards, consisting of himself, wife, and seven children, who lived in a small house about 300 yards south of the magazine, escaped with slight injuries. The magazine was entirely demolished, a wall of the detonator house, situated about 150 feet distant, was drawn out, allowing a part of the roof to fall in, while the watchman's house was completely wrecked.

An investigation made by the Zone police authorities shows that Arturo Richards, a young son of the night watchman, noticed smoke rising over the crest of the hill nearest the magazine a few minutes before the explosion. He at once notified his father, who, with all the other members of the family then in the house, started for a place of safety. The elder Richards was the nearest to the magazine when the explosion occurred, and, although thrown to the ground, escaped with a severe shaking up. One of the children, a little girl, had her arm bruised, and was subsequently removed to Colon Hospital. The day watchman, who lived with the Richards family, went on duty at 6 a. m. He returned later for his morning meal, but was seen by no one after he returned to his work again. The night watchman had been in the Canal service as a powderman for over seven years; the day watchman was a comparatively new man at the work.

The shock was strongly felt in Mount Hope, Colon, Gatun, and contiguous territory; and some damage, consisting of broken window glass, etc., was caused. In the vicinity of the magazine, vegetation was shorn off close to the ground, and trees of considerable size were broken down. The blast tore a large hole in the earth where the magazine stood, and deposited the material from it, and from the adjoining side of the hill, in a huge mound in front, 12 to 15 feet in height. The bed of the Mindi River nearby was filled to a height of from 10 to 12 feet, the barrier completely damming the stream and causing it to seek a new course. Considerable animal life within a radius of several hundred yards was destroyed, as evidenced by the carcasses of deer, iguanas, etc., found by the people who visited the scene.

Upon the first alarm, the Chief of the Division of Police and Fire Protection despatched the automobile from the Cristobal fire station to be on hand in case of need. Police from the Gatun station left at once to render any aid that might be required. The Depot Quartermaster procured a locomotive and a flat car which was run over the main line and the powder house spur to the scene.

The greater part of the stock of powder and dynamite on hand in the magazine was received on the Isthmus on May 28. Since that

time, it has been inspected at the intervals required by the regulations, and, in addition, readings of temperature have been taken daily. The explosion is thought to have been due to spontaneous combustion. A detailed statement of stock in the magazine is, as follows:

Class.	Pounds.
45 per cent dynamite, 1 1/2 x 8.....	210,875
60 per cent dynamite, 1 1/2 x 8.....	180,200
60 per cent dynamite, 2 x 8.....	44,450
45 per cent Trojan powder, 1 1/2 x 8.....	3,794
60 per cent Trojan powder, 1 1/2 x 8.....	11,600

The stock of caps and fuses in the detonator house were uninjured.

The magazine had been in use ever since October, 1908. The following description of it appeared in THE CANAL RECORD of October 21, 1908:

"The magazine is located one and one-half miles southwest of the Mindi spur, and is so surrounded by hills that an explosion would not seriously affect the nearby villages of Cristobal, Colon, Mount Hope, and Gatun. It is built into the hillside in such a manner that at the back and sides it is surrounded by earth. Hollow concrete blocks, 12 inches thick and bullet proof, have been used for the walls, and the roof is composed of concrete reinforced with old Belgian rails and water-proofed. The magazine is 112 feet long, 48 feet wide, and nine feet high inside. The concrete roof keeps the interior dry and cool. Ventilation has been provided by air flues which open under the roof. Six hundred thousand pounds of dynamite can be stored in the building. Near it, and yet so far away that an explosion in one would not affect the other, is a detonator house. It is 33 feet six inches long, 17 feet three inches wide, and 10 feet high inside. It is also built of concrete blocks, and has a ceiling of reinforced concrete, with a corrugated iron roof above it."

Isthmian Sunday School Association.

The regular quarterly meeting of the Isthmian Sunday School Association will be held in the Union chapel, Cristobal, on Sunday, July 12, at 1.30 p. m. An appropriate program, with special music, is being prepared. Delegates will be present from the Zone Sunday schools, and all interested are invited to attend. Train leaves Panama at 11 a. m., and returns from Colon at 4.30 p. m.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending July 18, 1914:

DATE.	Low	High	Low	High
	A.M.	A.M.	P.M.	P.M.
July 12.....	12 47	6 55	1 13	7 14
July 13.....	1 30	7 37	1 58	7 56
July 14.....	2 14	8 16	2 43	8 38

LAUNDRIES CONSOLIDATED.

Operation of Ancon Hospital Laundry Under Supply Department From July 1.

The Ancon Hospital laundry was consolidated with the Cristobal laundry and placed under the supervision of the Supply Department on July 1. At the same time, the Hotel Tivoli laundry was discontinued. This arrangement had been under consideration for several months, and decision was made that it would be best to put all laundries under one management. Under the new plan, it is proposed to transfer all of the work formerly performed by the Hotel Tivoli laundry to the Ancon laundry, which takes over also all piece work of employees at Ancon, Balboa, and Corozal, and such flat work as may be required by Ancon Hospital. All other flat work, and piece work of employees in towns other than those abovementioned, is to be handled by the Cristobal laundry, as before.

The Ancon hospital laundry dates back to the French days, and was in use to some extent, and with inferior equipment, when the Canal property was taken over by the United States Government on May 4, 1904. On November 14, 1904, the linen room in the hospital, with its equipment, including clothes presses, tables, chairs, sewing machines, and smoothing irons, was moved to the laundry, and two of the nurses were placed in charge; girls from the orphanage were procured to perform the work.

It was early recognized that more modern machinery would be required, and in the latter part of 1904, a requisition was placed for new equipment. This order was shipped from the United States in January, 1905, but it was not until the following November that installation of the machinery by the old Department of Labor and Quarters was completed. The French used an old tubular boiler, which was subsequently displaced.

Prior to the introduction of the new machinery, and the reducing of the work to a systematic basis, the operation of the laundry was attended by numerous difficulties, chief among which were labor troubles. On September 28, 1904, the superintendent of the hospital was authorized to employ Chinamen to take the place of the native washerwomen, who had become careless in their work, and were dissatisfied at the wages paid them. Some difficulty was met with, however, in obtaining Chinamen, but, later, they were engaged to do the private work, while the hospital laundry was performed by other help. The wages of the Chinamen were first placed at \$30, United States currency, a month, but not long afterward they refused to work for this amount, and were raised to \$37.50 a month, and ultimately to \$40 a month. With the installation of the new machinery, the services of the Chinamen were dispensed with, and native and West Indian woman labor was substituted, which practice has been followed since. Work for employees, outside of hospital and sanitary department employees, has been performed to some extent ever since 1904, but only through special permission of the head of the department. The work of the laundry steadily increased, and in one month in 1913, a total of over 288,000 pieces was handled.

LOST—On road east of Gold Hill and north of Paraiso, a pocketbook containing a sum of money, Panama railroad steam ticket to New York, and papers establishing the ownership of Lion Mason. Finder will please deliver to Colonel Hodges at Culebra and receive reward.

RECORD OF GATUN LAKE.

Proof of Capacity Given by Elevations During Season of Abnormally Small Run-off.

The past dry season was the first one during which Gatun and Miraflores Lakes were approximately at the operating level, thus exposing their maximum surface to the influence of evaporation. The records for the season are, therefore, indicative of what may be expected in the coming years of Canal operation.

The run-off from the watershed of Gatun Lake during the dry season, January to April, inclusive, amounted to 16,953 million cubic feet. This is 61 per cent of the normal dry season run-off, as determined by the average of 25 years of record. The lake was maintained at approximately normal elevation throughout the season. The total wastage of water through the spillway amounted to 4,854 million cubic feet. The amount consumed by lockages to and from the Atlantic entrance was 256 million cubic feet, and the amount of lockages, filling, tests, and pumping to and from Miraflores Lake was 581 million cubic feet. In addition, 137 million cubic feet were passed through the tunnel at Quebrancha divide for supply to Brazos Brook reservoir.

It is estimated that if none of the water had been allowed to pass out of the lake, except by evaporation, the run-off was sufficient to have raised the surface of the lake to 86.18 feet above sealevel.

Miraflores Lake watershed run-off amounted to nine million cubic feet, including negative yields, 21.33 million cubic feet, during February and March. The evaporation amounted to 81 million cubic feet. Except for water supplied to this lake from Gatun Lake, it would have fallen to an elevation of approximately 16 feet above sealevel, or 38.7 feet below its normal operating level, by April 30.

Miraflores Lake may always be kept at its operating level by water from Gatun Lake. To fill it completely from Gatun Lake would lower the latter 0.20 of a foot from an elevation of 85 above sealevel.

The record of the season of 1912, in which the run-off from Gatun Lake watershed was the smallest observed during the past 22 years, demonstrates its capacity for all the traffic that can be brought through the Canal.

Assuming that Gatun Lake was at elevation plus 87, at the beginning of the dry season on December 1, and that the hydroelectric plant at the Gatun Spillway was in continuous operation, and that 48 lockages a day were being made, the elevation of the lake would be reduced to its lowest point, plus 79.5, on May 7, at the close of the dry season, after which it would continuously rise. With the water at plus 79 in Gatun Lake there would be 39 feet of water in Culebra Cut, which would be ample for navigation.

The surface of Gatun Lake is to be, at the end of the rainy season, at 87 feet above sealevel, making the minimum channel depth in the lake and Cut 47 feet. As navigation can be carried on with about 39 feet of water, there will be stored, as a dry season surplus, over seven feet of water. Making due allowance for evaporation, seepage, leakage at the gates, and power consumption, this would be ample for 41 passages daily through the locks, using them at full length, or about 58 lockages a day when partial length is used, as would be usually the case, and when cross-filling from one lock to the other through

the central wall is employed. This would be a larger number of lockages than would be possible in a single day.

The average number of lockages through the Sault Ste. Marie Canal, on the American side, was 41.7 per day in the season of navigation of 1912, which was about eight months

long. The average number of ships passed was about 1½ per lockage. The total number of vessels was 14,916, registering 30,947,133 net tons. The Suez Canal passed 5,373 vessels in 1912, about 12 per day, with a total tonnage of 28,008,945, the largest of record; the number of vessels in the year 1913 was 5,085 and the total tonnage was 27,737,180.

JOINT LAND COMMISSION.

A Resolution.

The Joint Land Commission has adopted the following resolution:

WHEREAS, The United States of America and the Republic of Panama have adopted the following three rules for the guidance of the commissioners of the Joint Land Commission in the transaction of their business, namely:

1. The jurisdiction of the commission shall be invoked by petition of the claimant verified by his oath, or that of his agent, made before some officer authorized to administer oaths in the United States, the Republic of Panama, or the Canal Zone.

2. The commission may designate two of its members, one from each country, to make inspections and to take evidence, but the decision shall be based on all the evidence in the case and shall be made only by the commission, and in every case the commission shall, upon the request of either party, grant a full and free hearing.

3. Claims not presented to the commission within six calendar months after it resumes its sessions at Panama shall be barred, unless the commission shall, for exceptional reasons, extend the time three months in a particular case.

WHEREFORE BE IT RESOLVED that the secretary of this commission be and he is hereby instructed to enter the said rules of record as part of the rules for the government of the commission in the adjustment of all claims coming before it.

These rules were negotiated between the Department of State at Washington and the Panamanian Minister to the United States, and were accepted by the two governments, and the Joint Land Commission advised of that fact.

The Joint Land Commission resumed its sessions on May 25, 1914, and in consequence, the bar of limitation prescribed by rule No. 3 began to run as of that date.

Rule of Dismissal.

The following rule of dismissal, No. 128, was issued from the office of the Joint Land Commission at Ancon, C. Z., on July 2:

In the matter of sundry claims—With reference to the claims for improvements of the persons herein after named, the evidence before the Commission is that they have made settlements with the United States for their houses and other improvements. The names of such persons, their docket numbers, the tax numbers (where stated) of the houses included in the settlements, and their locations follow:

Docket No.	NAME.	Vol. No.	Tax No.	Locality.
546	Aguilar, José.....	3230	Juan Mina.
1145	Aguirre, Julian.....	3233	Quebrado Ancho.
569	Allen, Clifford.....	3803	468	Matachin.
65	Allison, Jno. Hy.....	3402	1721	Matachin.

In view of the agreements before noted, these claims call for no further action by this Commission, and they are accordingly dismissed.

FEDERICO BOYD, LEVI MONROE KAGY, S. LEWIS, DAVIO MARKS, Commissioners.

body was found; this was about 675 yards northeast of the limits of the Bella Vista bathing pavilion, or 500 yards from the boundary line. The Police and Fire Division held a coroner's inquest on Thursday, and has since been conducting an investigation to determine the responsibility for the death.

OFFICIAL CIRCULARS.

Accountable Officials.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., June 27, 1914.

CIRCULAR No. 64:

Effective at once, Mr. C. C. Snedeker, supervisor, east breakwater, Atlantic terminals, is designated an accountable official of The Panama Canal.

H. A. A. SMITH,

Auditor, Panama Canal.

Approved:
GEO. W. GOETHALS,
Governor.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., June 27, 1914.

CIRCULAR No. 65:

Effective at once, Mr. W. G. Thompson, supervisor, Cristobal coaling station, Atlantic terminals, is designated an accountable official of The Panama Canal.

H. A. A. SMITH,

Auditor, Panama Canal.

Approved:
GEO. W. GOETHALS,
Governor.

Papers and Metal Checks to Be Surrendered at Termination of Service.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 26, 1914.

CIRCULAR No. 675:

1. Prior to the delivery of final papers to an employee of The Panama Canal by timekeepers, such employee shall surrender to the timekeeper or clerk approving his voucher for payment, the following:

- The 24-trip ticket with unused coupons.
- Until the new series of metal checks is issued, the identification cards used by employees in the purchase of coupon books for cash.
- Release from quarters. In case an employee does not occupy Panama Canal quarters, the release must so state.
- Release from property accountability from both gold and silver employees responsible for Government property. Property releases will be issued to responsible officers by accountable officials. Property releases to all other employees responsible for property will be issued by responsible officers. Accountable officials will furnish the chief timekeeper with lists of responsible officers, and will advise him of all additions to or changes made in these lists from time to time. Requests on timekeepers for the issue of time vouchers must show whether the employee is responsible for property, except in the case of laborers and other classes not entrusted with property. Time vouchers for accountable officials will be held in the office of the Auditor until such time as their property account is audited, and release signed by the Auditor.

2. If in any case the timekeeper is unable to take up all of above papers, he will notify the Auditor's office and advise payee what papers he must present at that office before receiving his time voucher.

3. Effective July 1, 1914, or as soon thereafter as the new series of metal checks is issued, the Paymaster will take up the new Panama Canal metal checks from employees upon payment of time vouchers issued on account of termination of service. Such metal checks shall be forwarded to the Auditor the first of each month. Should the employee fail to surrender his metal check, 50 cents shall be deducted.

4. Employees leaving the service will be furnished a single trip pass for themselves and dependent members of their families from the place of employment to port of embarkation by the department or division by which they are employed.

GEO. W. GOETHALS,
Governor.

Examination by Board of Local Inspectors.

BOARD OF LOCAL INSPECTORS,
ANCON, C. Z., July 6, 1914.

The Board of Local Inspectors will conduct examinations at the administration building, Ancon, on Wednesday, July 15, 1914, beginning promptly at 2 p. m., for persons desiring the following classes of licenses: Pilots, masters, mates, marine engineers, chauffeurs, and navigators of motor boats. All applicants for license must procure from the office of the board, Ancon, forms of application and information respecting the filling out of the same, not later than the day previous to the examination. In addition, all persons desiring chauffeurs' licenses must provide themselves with automobiles with which to demonstrate their ability to properly operate the same.

The demonstration test for applicants for chauffeurs licenses will be given on Tuesday, the day preceding the regular examination, at 2 p. m., at the administration building, Ancon; on Wednesday, the day of the regular examination, for out-of-town applicants, at 2 p. m., at the administration building, Ancon.

Effective with the next examination, applicants for

license as navigator of motor boats will be required to give a demonstration of their ability to operate such boats, and will be obliged to provide themselves with boats for this purpose. This test will be given on Thursday, the day following the written examination, as follows: At Cristobal, upon arrangement with the captain of the port; at Gamboa, at 8 a. m.; and at Balboa, at 2 p. m. Applicants for the test at Cristobal or Balboa should present themselves at the office of the captain of the port; at Gamboa, the deputy inspector will be present at the Panama railroad station at the hour abovementioned.

By direction of the chairman of the board.

W. H. HYDE,
Clerk to the Board.

Concentration of Timekeeping Offices in New Administration Building.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 3, 1914.

All concerned—Effective July 15, 1914, the timekeeping offices now located at Culebra, Cristobal and Balboa, will be consolidated in the new administration building at Balboa.

All timekeeping matter now addressed to district timekeepers, Cristobal and Balboa, and chief timekeeper, Culebra, should be addressed to chief timekeeper, Balboa, commencing July 15, 1914.

E. W. PALMER,

Chief Timekeeper.

Approved:

C. A. McILVAINE,
Executive Secretary.

Supplies for the Canal.

The following steamers, with supplies for The Panama Canal and the Panama Railroad Company, arrived at the ports of Colon, Cristobal, and Balboa during the week ending July 4:

Prinz August Wilhelm, June 29, from New York, with 200 cases soap, for stock.

Pennsylvania, June 29, from San Francisco, with 581 pieces redwood lumber, for Mechanical Division.

St. Andrews, June 29, from Baltimore, with 661 barrels reinforcing bars, for Division of Terminal Construction; 232 barrels reinforcing bars, for permanent buildings; 32 packages machinery, for Mechanical Division; 8,041 barrels reinforcing bars, for stock.

Parismina, July 1, from New York, with 114 boxes marble, for permanent buildings; 664 barrels brick, for Division of Terminal Construction; 13,352 board feet oak lumber, 15,975 board feet yellow pine lumber, for Mechanical Division; 200 pieces piling, untreated; 15,027 board feet yellow pine lumber, for stock.

Zacapa, July 1, from New York, with 98 reels cable, for Division of Fortifications; 14 packages electrical material, for Mechanical Division; 51 boxes caustic soda, for stock.

Turrialba, July 2, from New York, with 6,811 board feet yellow pine lumber, 14,290 board feet poplar lumber, 33,840 board feet yellow pine lumber, for Mechanical Division; 771 barrels brick, for Division of Terminal Construction; 16,672 board feet yellow pine lumber, 38 reels cable, 504 bales straw, for stock.

Nortonian, July 2, from Liverpool, with 155 barrels carbolic acid, for stock.

Navisbrooke, July 2, from Gulfport, with 105,302 board feet switch ties, 636 pieces piling, untreated, for stock.

Colon, July 3, from New York, with 14 crates wire

fabrics; for Division of Terminal Construction; 35 cases sash operating devices, for Mechanical Division; 13 cases woodwork, for Division of Municipal Engineering; 30 cases woodwork, 100 barrels cement, for permanent buildings; 22 cases brass tubes, 13 cases paper, 31 cases varnish, 1,889 pieces wrought pipe, 378 cast iron pipe, 500 kegs white lead, 11,000 bags cement, for stock; and a miscellaneous cargo, the whole consisting of 14,682 packages, weighing approximately 850 tons.

Tenadores, June 27, from New York, with 55 reels cable, for Division of Fortifications; 154 boxes window glass, for stock.

Rainfall, June 1 to June 30, 1914, Inclusive.

WEATHER CONDITIONS, CANAL ZONE, JUNE, 1914.

Rainy season weather continued throughout the month. The rainfall during June was above the station averages at 11 stations, and deficient at eight stations. The monthly totals ranged from 5.64 inches at Miraflores to 17.78 inches at Gamboa. The maximum precipitation recorded in one day was 5.18 inches at Gamboa on the 18th. Heavy general rains occurred on the 9th, 18th, and 23d.

Average air temperatures at the various stations were approximately one degree Fahrenheit above normal. The wind movement was the highest of record for the month of June at each of the first-class stations.

There was a general deficiency in atmospheric pressure during the month, while the daytime cloudiness was above normal at all stations, except Ancon.

Night fogs were of frequent occurrence at the interior stations. No fogs were observed at either coast. Of the fogs observed, 45 per cent were dissipated by 6.30 a. m., 90 per cent by 7.30 a. m., and 100 per cent by 8.30 a. m.

The following table summarizes the weather conditions for the month:

STATION.	Pressure (reduced to mean of 24 hours).	Temperature.				Mean relative humidity.	Precipitation.			Wind.			
		Mean.	Maximum.	Date.	Minimum.	Date.	Total inches.	Station average.	Days of 0.1 inch or more.	Total movement (miles).	Prevailing direction.	Max. velocity (in miles).	Direction.

Elevations of Gatun Lake, (feet above mean sea level)—Mean for the month 84.85 feet; maximum, 85.14 feet on the 18th; minimum, 84.68 feet on the 21st. Evaporation from lake surface 4.558 inches.

COMMISSARY DEPARTMENT.

Instructions to Chief Stewards When Drawing Supplies.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., July 6, 1914.

CIRCULAR No. 505:

Chief stewards—Your attention is called to Chief Quartermaster's Circular No. 143, dated June 8, 1914, and my circular No. 577, dated June 29, 1914, on invoices to be made when drawing supplies from local commissaries, or in case lots from the depot commissary.

Particular attention must be given to this matter, and, whenever possible, the invoices should be typewritten, and, when a typewriter cannot be used, carefully and distinctly written in long hand on Form 244 (combined requisition and invoice), with sizes and description of articles given in each instance.

In ordering goods from local commissaries, chief stewards should acquaint themselves with the stock carried by the respective line commissaries before making their requisitions, so as to prevent as much as possible the necessity of the line commissaries scratching out items not on hand, from the requisition as submitted.

F. O. WHITLOCK,
Assistant Chief Quartermaster.

Commissary Hours.

The commissary stores are open during the following hours: From 8 a. m., to 12.30 p. m., and 3 to 6.30 p. m.

The gold departments of the Cristobal store will open at 2 p. m., on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open until 7 p. m.

* Indicates advance from preceding list.

† Indicates reduction from preceding list.

**Indicates 5 cents allowed for return of bottle.

† Sold only from commissaries; no orders taken for delivery.

‡ Sold only from cold storage and not from commissaries.

Porterhouse roast includes any cut of hind quarter down to rump, and will not be cut if orders for steak will consume the supply.

Tenderloins on porterhouse will not be cut and sold separately.

Not less than 1/2 ham or 1/2 shoulders of fresh pork will be sold.

Daily cold storage orders will be filed and kept for at least one month.

Lost—Partly used \$15 meal book, No. 3331, on Sunday, June 21, either on train then leaving for Empire at 10.30 a. m., or between Ancon pump station and the Panama railroad station in Panama, or in Empire. Finder is requested to return same to owner, Geo. D. Morton, Ancon, C. Z.

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

GENERAL.

The schedule for motion pictures for the week July 13 to 18 is, as follows: Monday, Gatun; Tuesday, Empire and Balboa; Wednesday, Pedro Miguel; Thursday, Cristobal; Friday, Culebra; Saturday, Corozal.

PEDRO MIGUEL.

A local tenpin tournament is being arranged. All members interested in tenpin bowling are invited to enter.

Eleven games have been played in the local handicap pool tournament. Mr. Eggleston is in the lead, having won all four of the games he has played.

All men interested in handball or indoor baseball are invited to meet in the gymnasium on Monday evening, July 13, for practice.

Seventy-five of the soldiers stationed at Pedro Miguel Lock have joined the local clubhouse.

CULEBRA.

A special moving picture exhibition was given on Thursday night, July 2. Mrs. William Keenan furnished piano music.

S. P. Verner gave a patriotic address on Sunday night, July 5, taking for his subject "The new freedom through the square deal."

A pool match between Mr. Dewey of Gatun and Mr. Barnes of Culebra, has been arranged for Saturday night, July 13. At the match between the two teams at Gatun, recently, Mr. Barnes defeated Mr. Dewey one game.

GATUN.

Over 200 of the soldiers located at Gatun have joined the association.

During the week ending July 4, the gymnasium was used almost entirely for athletic training. The secretary was assisted in this work by Messrs. C. D. Hindle and D. R. Walker. Gatun clubhouse members who took prizes at Cristobal on the Fourth were: Godwin, Stamm, Grunewald, P. Twitchell, Weiss, Butcher, and F. Loulan.

The teams who rolled over 1,000 in the 2-man ragtime tenpin tournament were, as follows: Humphrey and Chandler, 1,070; Chandler and Kiger, 1,043; O'Meara and Hodges, 1,041; Howard and O'Meara, 1,040; Conley and O'Meara, 1,018; Kiger and O'Meara, 1,009; Humphrey and O'Meara, 1,007. The high averages were, O'Meara, 178-7, Humphrey, 168-9, Hodges, 163-6; Howard, 158-1; Chandler, 154-1; Kiger 154-4; Easter, 151-1. High single score, Kiger, 206; second high single score, Chandler, 205.

Basketball will be one of the chief activities in the gymnasium from now on. Several practice games will be held each week. Every one who attends practice will be given a chance to play.

CRISTOBAL.

Cristobal took two out of three games from Corozal at tenpins on Friday, July 3, by the following scores: Cristobal—851, 743, 836. Corozal—770, 811, 774.

Owing to Cristobal being in darkness on Wednesday night, July 1, the ragtime bowling tournament was postponed until the following Wednesday night.

High scores in duckpins for the week ending July 4 were, as follows: Steele, 115; Gill, 110; Garrett, 105; Butters, 104.

The "Yankees" defeated the "White Sox" at indoor baseball on Thursday, by the score of 18 to 14.

Following a temporary interruption caused by preparations for the Fourth of July athletic meet, all gymnasium classes will be resumed.

Movement of Vessels at the Port of Balboa.

The arrivals and departures of steamships at the port of Balboa for the week ending July 4, were, as follows:

Arrivals—June 27, *Nebraska*, from San Francisco; June 29, *Neaport*, from San Francisco; *Cordelia*, from Port Harford, Cal.; *Mantaro*, from Payta; *Pennsylvania*, from San Francisco; June 30, *Guatemala*, from Guayaquil; July 1, *Huasco*, from Valparaiso; *Oberon*, from San Luis.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,

THE CANAL RECORD,

Ancon, Canal Zone,

Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Moving Into Permanent Administration Building.

The occupation of the permanent Administration Building at Balboa was begun on the morning of Wednesday, July 15, with the moving in of the chief timekeeper's office from Culebra, and the district timekeepers' offices from Balboa and Cristobal. The consolidated force includes about 50 gold employees, of whom 20 are from Culebra, and the remainder from Balboa and Cristobal in about even number; and a complement of silver clerks and messengers. The space assigned them is in one large room on the first floor, southwest portion of the main building, extending from the rotunda to the west end of the building.

All of the heavy construction work on the building has been completed, and the plumbing, plastering, and setting of windows and doors are almost completed. The principal work now in progress is the laying of the wood flooring in the first story of the south wing of the building, the remainder of same being complete; the laying of the red vitrified tile for paving the colonnades and corridors, and the roof of the *porte cochère* at the rear, flooring the rotunda with marble mosaic, general carpenter finishing work, painting, and the pulling of electrical and telephone cable through the conduits.

Building of Quarters by Employees.

The Governor has approved the recommendations of the Special Attorney and the Chief Quartermaster that employees of The Panama Canal or Panama Railroad Company, either on the silver or gold roll, be permitted to build houses for their personal occupancy, under proper restrictions and within certain well defined areas, in the Canal Zone. These licenses or permits are to be issued with the understanding that the intending builders will receive no compensation for their improvements; that the licenses will become inoperative upon their termination of service with the Canal or railroad, and that they do

not prejudice the rights of the Canal or railroad company in requiring the owners of the improvements to vacate same at any time.

This arrangement has been decided upon with a view of relieving the congestion of quarters at the Pacific end of the Canal, which now exists, and which will probably continue to prevail for some time to come. There have also been a number of requests of this nature from employees, both white and colored, especially in the Corozal district. The depopulation of the labor camps along the west bank of the Canal will compel the employees formerly residing in that territory, most of whom find employment at Balboa, to go to Panama to live. Quarters there are scarce, and rents are very high. The silver settlement at La Boca was founded for the purpose of relieving these conditions, and has done so to a certain extent. There are now over 400 apartments in that town, but all of these are rented, and there are between 400 and 500 applications from others on file which cannot be acted upon at present.

With regard to the American force, it is estimated that, taking into consideration the new permanent quarters and reerected quarters projected at Balboa, and vacancies caused by reduction of force, there will still be barely enough accommodations at Balboa, Ancon, and Corozal for some time to come to take care of the regularly assigned transfers. There are over 200 waiting applicants on the gold rolls for assignment to quarters in those towns, in addition to 75 employees who have special assignments in Empire and Culebra, and must move when those towns are abandoned. There are also a large number of American employees living in Panama and paying high rents.

A decision will be made shortly as to what areas will be set aside for those employees who care to build their own habitations.

Lock Patrols.

The men of the Tenth Infantry on duty at the Canal locks were changed on Wednesday, July 15. A special train carrying the Second Battalion, comprising Companies E, G, and H, left Las Cascadas at 7 a. m., and was run through to Miraflores Locks station, thence back to Pedro Miguel, and later to Gatun. The patrol system at the locks was first established on April 24, and since that time, two companies have been constantly stationed at Gatun Locks, and one each at Pedro Miguel and Miraflores Locks. The companies are relieved every month, so that in time, if the present arrangement is continued, all of the men of the command will have served on this detail. Most of the men on duty at Gatun are quartered in Panama Canal buildings, and the mess hall is also located in one of the type buildings; at Pedro Miguel and Miraflores, however, where there are no quarters available, the men sleep in tents situated on the east lock walls, and eat in a

general mess tent. A small wooden building is used for an office by the officer of the day at each place. The first camp of the men at Miraflores Locks was on the old Miraflores dump. This site was abandoned with the advent of the rainy season, partly on account of the muddy surroundings, and partly on account of its distance from the locks. The sick rate among the men has increased since the beginning of the rainy season; it has been highest at Miraflores, and lowest at Gatun. At Gatun, mosquitoes and sand flies have made the patrol duty, especially at night, more than usually tedious. The Canal clubhouses at Gatun and Pedro Miguel have been of considerable aid in breaking the monotony of the patrol duty at those points.

The Commissary Privilege.

A report appears to have gained currency among the nonemployees on the Isthmus, particularly Americans, that commissary coupon books may be purchased for cash on payment of their face value, plus the Panamanian duty of 15 percent. This idea is erroneous. The Canal Treaty and subsequent agreements entered into with the Republic of Panama restricts the commissary privilege to employees of The Panama Canal and the Panama Railroad Company, and without the prior consent of the Panama Government, no extension of this privilege to others can be made.

Arrival of Pontoon for Floating Crane "Ajax".

The pontoon of the floating crane *Ajax* arrived in Colon harbor in the afternoon of July 8, and was towed to Dock 14, Cristobal, in the morning of Thursday, July 9. It left the yards of the contractor, the Deutsche Maschinenfabrik Actiengesellschaft, at Emden, Germany, on April 26, and was 74 days on the way. It cleared Falmouth, England, for the Madeira Islands on May 15, and reported its arrival at Madeira on June 4. It was in tow of the tug *Thames* of the International Towing Company of Rotterdam. The original plan was for the tow to sail from Falmouth to Vigo, Spain, where the tug would coal, but on account of heavy seas in the Bay of Biscay, the tow put back to Falmouth, coaled, and went direct to the Madeiras. It was expected that it would have reported by the latter part of June from Barbados, but instead, it sailed direct to Colon.

The pontoon of the second crane, the *Heracles*, left Emden on Saturday, May 30, in tow of the tug *Schelde* also of the International Towing Company. It is due at Colon about the first of August.

In anticipation of the arrival of the pontoons, forces of the contractor are engaged in the erection of the crane jibs at Gatun. They completed the assembly of the structural steel for the jib of the *Ajax* on Monday, June 29, and are now riveting it. As soon as the jib for the *Ajax* was erected, they began the erection

of the jib for the *Hercules*. The force consists of 18 white Germans, and about 25 West Indian helpers. A superintendent, together with five erectors and painters, arrived on the *Colon* on July 3.

The jib erection is taking place on the east backfill of the middle level of Gatun Locks. A jib is 140 feet long and contains 165 tons of steel. It is erected with its broad, or pivot, end toward the lock, and will be handled into place on the pontoon from the lock wall. The pontoon will be towed into the lock chamber and brought close to the east wall; the jib will then be moved over on rollers and linged to the tower of the crane. The water in the chamber will be regulated to bring the pontoon to exactly the right level. After the jib has been affixed to the tower, the cable attachments will be made, and the jib will be swung clear of the wall by the crane's operating machinery, just as it will be swung when in use.

As shipped the pontoons were complete as to hull and all internal steam and electric plant; the superstructures of towers and bells were in place, with the exception of the counterweight arm, winch house and its machinery, the crosshead, and the spindles. Upon arrival at Colon, each pontoon is to be stationed at Dock 14, Cristobal, alongside which the superstructure will be completed for the attachment of the jib.

PERSONAL.

Mr. Edward Schildhauer resigned as electrical and mechanical engineer, effective July 13, and, accompanied by his family, will sail for New York on the United Fruit Company's steamer *Almirante* on Thursday, July 16. He entered the Canal Service as electrical and mechanical engineer on November 15, 1906, but was stationed in Washington until September of the following year, when he was transferred to the Isthmus, arriving on September 2, 1907. During his period of service, he has been occupied principally with the designing, manufacturing, and installation, under the direction of Col. H. F. Hodges, formerly Assistant Chief Engineer, and since April 1, Engineer of Maintenance, of the machinery and electrical equipment for the operation of the Canal locks, spillways, and power plants, including the new hydroelectric station at Gatun, the substations at Gatun, Cristobal, Miraflores, and Balboa, and with the new transisthmian transmission line. He invented and patented the bull wheel, which operates the lock gates. He also invented and patented the system of electric towing locomotives for handling ships in the locks. Another novel device, manufactured from designs prepared in his office, is the system of remote control, by which every part of the lock operating machinery is manipulated from a central station or control house, and where, with the aid of a reproduction of the lock and its operating features in miniature, every movement is registered before the eyes of the operator. Mr. Schildhauer was born at New Holstein, Wis., entered the University of Wisconsin at the age of 21, and was graduated from the institution in 1897, with the degree of bachelor of science in electrical engineering. The master's degree was conferred in 1911. He was engaged in electric railway construction until 1898, when he entered the employ of the Chicago Edison Company, and was with this company at the time of his appointment to the Canal Service. He

is president of the Panama Section of the American Institute of Electrical Engineers, chairman of the Canal Zone Chapter of the American National Red Cross Society, and a member of various societies in the United States, including the American Institute of Electrical Engineers, the American Society of Civil Engineers, the American Society of Mechanical Engineers, the National Electric Light Association, and the American Electro-Chemical Society. He will make his headquarters at the Engineers' Club, New York City. He was given a farewell reception by the Tivoli Club on Saturday evening, July 11, and by the University Club, on Wednesday evening, July 15.

Mr. Fitz J. Lewis, supervisor of the Pacific locks, resigned, effective July 14, and will sail for New York on the United Fruit Company's steamer *Almirante*, on Thursday, July 16. He entered the Canal Service on April 11, 1906, as a machinist in the shops of the Mechanical Division at Empire. On May 1, 1907, he was appointed fuel oil expert, and held that position until December 16 of the same year, when he was made a special machinist. On September 30, 1909, he was transferred to the Central Division, and placed in charge of the steamshovel erecting department at Empire shops, as erecting foreman. He was transferred to the First Division on August 12, 1912, as general foreman, and continued to perform his duties as general foreman until December 24, 1913, when he was appointed supervisor of the Pacific locks to succeed T. H. Jordan. Prior to his coming to the Isthmus, he was a stationary engineer for about 11 years, working for various firms in the South, and from 1903 to 1906, he was in the employ of the Neche Canal Company of Beaumont, Tex., as chief engineer. He is a member of the American Society of Mechanical Engineers, Association of Stationary Engineers, and of a number of fraternal organizations. His former home was Amite City, La.

Mr. A. Raggi, assistant engineer, sails for Bordeaux, France, on Thursday, July 16, on the steamer *Perou* of the Compagnie Générale Transatlantique, on leave of absence of 66 days, which he will spend in Switzerland.

Levelman and Transitman Examination.

Examination for promotion to the positions of levelman and transitman is scheduled to be held in the Administration Building at Culebra (second floor, Room 17), on Sunday, August 9.

The examination will commence promptly at 9.15 a. m., and will be divided into three

Estates Being Settled.

The following estates of deceased employees of The Panama Canal or the Panama Railroad Company are now in process of settlement by this office, and any claims against these estates, or any information which might lead to the location of heirs, or to the recovery of property, bank deposits,

parts, which will be given in the order indicated, viz: Written and oral examinations, and a statement of education and experience. Competitors will be required to complete the written portion of the examination before 12.30 p. m.

Applications for examination should be addressed to the undersigned, through the head of division, before the close of business on Thursday, August 6.

Applicants should bring to the examination room, pens, ink, pencils, triangles, and tables of circular functions, but no paper or blotters.

Applicants who fail to appear for examination before 9.15 a. m., or who do not apply for examination through the proper channels before the close of business on Thursday, August 6, will not be admitted to the examination.

No card of admission will be needed.

A. B. NICHOLS,

Chairman, Examining Board.

CULEBRA, C. Z., July 13, 1914.

Canal Tolls and Pilotage in June.

The amount of Canal tolls collected by the captain of the port at Balboa during the month of June was \$4,910.80, and the amount of pilotage, \$450, a total of \$5,360.80; at Cristobal, the sum of \$3,408.16 in tolls was collected by the captain of the port, and \$1,110 in pilotage, a total of \$4,518.16. The grand total of Canal tolls collected was \$8,318.96, and for pilotage, \$1,560. The sending of lighters loaded with freight through the Canal has been suspended, as the former freight congestion at Balboa has been relieved, and the railroad is able to take care of the present traffic.

Changes of Personnel in Supply Department.

Joseph Birnie resigned as chief clerk in the office of the Chief Quartermaster at Culebra, effective July 20, and sailed for New York on the *Advance*, on Wednesday, July 15. He entered the Canal Service on July 15, 1907, as a stenographer in the old Department of Material and Supplies, and was transferred to the Quartermaster's Department, when the former organization was abolished on September 1, 1908. He was made chief clerk on April 1, 1913. M. B. Stevens, formerly United States requisition clerk in the office of the Chief Quartermaster, has been appointed chief clerk to succeed Mr. Birnie, and J. J. Jackson, formerly chief clerk in the office of the Depot Quartermaster at Mount Hope, has been made United States requisition clerk.

postal savings or postal money order deposits, or any other moneys due them, should be presented at this office at once, in order that the estate may be settled as soon as possible. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once:

SOCIAL LIFE OF THE ZONE.

Isthmian Sunday School Association.

The Isthmian Sunday School Association held its regular quarterly meeting in the Cristobal Union Church on Sunday afternoon, July 12. The president, Mr. J. F. Warner, was in the chair. The song service, with which the meeting was opened, was conducted by Mr. Dohrman of Empire; devotional exercises were conducted by the Rev. Charles H. Ports of the Methodist Church, Panama, and the Cristobal Union Sunday school gave special selections. Other numbers on the program consisted of an address on teacher training by J. H. Weaver, and an instrumental trio by the Prochaska family, accompanied on the piano by Mrs. Nora Hardeman. The round table discussion was led by Mr. J. A. Page. The officers elected for the ensuing term were, as follows: President, James Stokoe of Balboa; vice-president, J. M. Weaver of Cristobal; secretary, L. C. Van-nah of Balboa; treasurer, E. M. Foster of Ancon.

The Rev. Mr. Wallace, a missionary from Mexico City, who was on the Isthmus in transit to Colombia, addressed the delegates. The subject of his talk was Mexico, and the revolution as it affects the religious life of the country. In the course of his address, Mr. Wallace gave a description of the life of a missionary in Mexico, and told of the methods of work used by the missionaries.

Statistics of the attendance at the convention, and of the enrollment of the schools are, as follows:

Balboa—Eight present; number of teachers and officers enrolled, six; number of pupils, 41, average attendance, 25.

Panama Methodist Church—Number present, five; number of teachers and officers, eight; number of pupils, 78, average attendance, 58.

Guachapali Methodist Church—Number of pupils enrolled, 70.

Corozal—Number present, five; teachers and officers enrolled, 14; number of pupils, 87, average attendance, 72.

Pedro Miguel—Number present, three; teachers and officers, six; number of pupils enrolled, 59; average attendance, 40.

Paraiso—Number present, four; teachers and officers, four; number of pupils, 36; average attendance, 28.

Culebra—Number present, six; number of pupils enrolled, 50.

Empire—Number present, four; teachers and officers, 15; number of pupils enrolled, 150, average attendance, 85.

Gatun—Number present, nine; teachers and officers, 15, number of pupils enrolled, 85; average attendance, 75.

Cristobal—Number present, 23; teachers and officers, 22; number of pupils, 223; average attendance, 145.

Visit of Bishop Knight.

The visit of the Rt. Rev. Albion W. Knight to the Episcopal Mission in Panama, was extended a few days beyond the original intention. The prelate arrived on the Isthmus on Wednesday, July 1, and will sail for New York, via Havana, on the *Almirante*, on Thursday, July 16. During his visit to the mission, Bishop Knight confirmed 132 persons. The division by churches is, as follows: St. Luke's Hospital chapel, Ancon, two; St. Paul's, Panama, 36; Christ Church, Colon beach, 23; St. Stephen's, New Gatun, 11, and St. Mark's, Culebra, 60; in the latter

class were the candidates from St. Augustine's, Paraiso, St. Andrew's, Empire, and confirmants from Las Cascadas. He preached at St. Luke's chapel, Ancon, on Sunday morning, July 5, and on Sunday morning, July 12. Although Bishop Knight enters upon his duties as vice-chancellor of the University of the South at the opening of the university year, he will continue as bishop in charge of the mission at Panama.

Opening of Chorrillo Church.

The opening service of the new Baptist church in Chorrillo will take place on Sunday, July 19, at 10.45 a. m. The formal opening of the doors will begin the service, the act being performed by the Hon. William Jennings Price, the American minister, who laid the cornerstone of the building on April 10. Mr. Price will deliver an address at the dedication service which follows, beginning at 11 o'clock. Further services to be held on the same day in connection with the event are, as follows: At 3 p. m., with the Rev. Stephen Witt of Gatun, as preacher; at 7 p. m., with the Rev. S. Moss Loveridge of Culebra, as preacher. During the week following, there will be a service in the church every evening at 7.30, with preaching by different local ministers. The church has been erected under the direction of the Rev. Mr. Loveridge of Culebra. There is seating capacity for 350 persons. In the rear are convenient vestries and a detached cottage for the caretaker. The cost of the site for the building was donated by the Home Missions Board of the Southern Baptist Convention.

St. Luke's Hospital Chapel Notes.

There will be a special meeting of the Woman's Altar Guild of St. Luke's Hospital chapel, Ancon, at Ancon hall on Friday morning, July 17, at 9 o'clock. The members are urgently asked to be present at this meeting.

The lecture on personal hygiene under the auspices of the junior auxiliary of St. Luke's chapel has been postponed from the original date, July 15, to August 5. The regular business meeting of the auxiliary was held at the home of Mrs. Charles F. Mason on Wednesday afternoon, July 15, from 5 to 6 o'clock. The physical culture and folk dancing class will be held at Ancon hall on Wednesday afternoon, July 22, from 4.45 to 5.45 o'clock.

Denial of Quarantine Rumor.

Referring to a rumor that Alabama and Texas had quarantined against New Orleans, the general agent of the United Fruit Company states he has cable advices to the effect that there is no truth in the rumor, and that the States mentioned have not quarantined against New Orleans.

Branch Post-Office at Balboa Heights.

A branch post-office, to be known as the Balboa Heights post-office, was opened on Wednesday, July 15, in the new Administration Building. The location and fittings are temporary, and will be used only until the permanent quarters are ready, and the new equipment is received. The branch is in charge of an acting postmaster.

Nombre de Dios Assembly, Fourth Degree, K. of G.
Regular meeting, Sunday, July 19, lodge hall over Panama Canal hotel, Ancon, at 2.30 p. m.

JOHN J. LUCKEY,

Faithful Scribe.

NAOS ISLAND, July 15, 1914.

JOINT LAND COMMISSION.

Calendar for Week Ending July 25, 1914.

The following is a calendar of cases set for hearing during the week ending July 25, 1914:

MONDAY, JULY 20.	
Docket No.	Claimant.
390	William Robinson
391	Thomas Crawford
392	William Coney
393	Charles Snill
394	Joseph Snill
395	James Gordon
396	Samuel Clarke
397	Llan Braley
398	David Harrison
399	Robert Nullon
400	Tomas Julio
401	Robert Dennis
402	David Lilly
856	Julian Barrio
858	Joseph Lambre
860	Manuel de Jesus Sae-
	no
Docket No.	
Claimant.	
862	Nicomeres Gonzales
863	Robert Haley
1035	John Williams
1091	José Orozco
1099	Elesia Guardia
1123	Julio Gonzalez
1125	Samuel Hendri
1127	Robert Hause
1133	Cecilio Pitti
1134	William Pitt
1137	Santiago Saint
1149	Alexander Morgan
1152	Pastor Perez
1172	Nathaniel Williams
1422	Ursula Rodriguez
WEDNESDAY, JULY 22.	
390	Clementine Mondelle
403	David Walker
422	José Martin
759	Joseph Amiel
843	Pedro Lopez
1242	Sipion Maucay (Mon-
	cock).
1434	James Palmer
1442	José Pinillo
1555	Heriberto Villaverde
WILLIAM TAYLOR,	
Secretary.	

Rule of Dismissal, No. 129.

In the matter of sundry claims—The records of the commission show that in some cases more than one statement of claim has been filed covering the same property. In the following instances, duplicate claims have been filed with the commission covering property for which settlements have either already been made, or the claims otherwise disposed of, as hereinafter shown:

Devison (Davidson), Joseph, docket No. 231—This claim, covering improvements on property on the Bosque estate, is dismissed for the reason that it is a duplicate of claim docket No. 2090, which was dismissed by the commission of 1913 under the rule of dismissal No. 46, account of previous payment having been made.

Masa, Miguel, docket No. 788—This claim, covering improvements on property at Juan Mina, is dismissed for the reason that it is a duplicate of claim docket No. 541, which was dismissed by the commission under rule of dismissal No. 128, dismissing claims already settled.

Ruiz, Felipe, docket No. 1083—This claim, covering improvements on property located at Culo Seco, is dismissed for the reason that it is a duplicate of docket No. 2328, settled under award No. 8 of the commission of 1913.

Smith, George, docket No. 1094—This claim, covering improvements on property located at Maquenque, is dismissed for the reason that it is a duplicate of docket No. 2345, settled under award No. 8 of the commission of 1913.

Tinco (Quinto), Juan, docket No. 250—This claim, covering improvements on property located at Buena Vista, is dismissed for the reason that it is a duplicate of claim docket No. 2301, which was dismissed by the commission of 1913, under rule of dismissal No. 102, in view of the fact that the evidence submitted to the commission was not of a character to justify the commission in making an award.

In view of the facts referred to in the foregoing, these claims call for no further action on the part of the commission, and are accordingly dismissed.

FEDERICO BOYD, LEVI MONROE KAGY,
S. LEWIS, DAVID MARKS, Commissioners.

ANCON, C. Z., July 8, 1914.

Odd Fellow Installation.

An installation of officers in Isthmian Canal Lodge, No. 1, Independent Order of Odd Fellows, will be held in Ancon lodge hall on Thursday evening, July 16. The installing officer will be Past Grand Charles W. Beetham, who was designated to that authority by the retiring deputy grand sire, B. F.

Sisson. Refreshments will be served, and all Odd Fellows on the Isthmus will be welcomed.

Obituary.

Word has been received of the death, at Troy N. Y., of Albert V. Markham, who entered the Canal Service on February 25, 1907, and arrived on the Isthmus on March 4 of that year. He was first employed as a rodman in the old Atlantic Division, but on June 10, 1909, was transferred to the Department of Sanitation and appointed sanitary inspector at Paraiso. He resigned from the service on July 13, 1909, but reentered it again later, and for a short time was a foreman in the old Pacific Division. He left the service permanently on August 11, 1911, by reason of his having failed to pass the Medical Examining Board, and returned to his former home at Troy. He was 31 years of age and unmarried. His mother, Mrs. Anna L. Markham, living at Troy, and a brother, Maj. Edward M. Markham, Corps of Engineers, U. S. A., survive him.

The death of John H. Harrell, who resigned from the Canal Service on March 31, 1914, to go to Costa Rica, is reported from San José. He entered the service on May 29, 1913, as a rodman in the Second Division, but was transferred to a position as carpenter in the Mechanical Division on August 6, 1913. He was a native of North Carolina, 50 years of age, and married. He is survived by his wife, father, and mother, who reside at No. 1050 Post street, San Francisco, Cal. While occupying quarters at Balboa, he started a small experimental station for the development of a hybrid cotton plant, and a silk fibre plant. A description of these two plants was given in THE CANAL RECORD of April 1, 1914. His visit to Costa Rica was for the purpose of studying the plant life of that country, in addition to continuing his cotton experiments.

Ellwood S. Hand, an American, died at Colon Hospital at 11.35 p. m., on Saturday, July 11. He entered the Canal Service as a rodman in the First Division on March 22, 1913, and continued in that department until June 19 of the same year, when he separated from the service. He was reemployed on August 25, 1913, as a rodman at the Balboa terminals, and worked until November 3 of that year, when he resigned. He was last employed from December 6, 1913 to January 8, 1914, as a clerk in the Mount Hope depot. He was 29 years of age, unmarried, and is survived by his father, A. W. Hand, living at No. 11 Perry street, Cape May, N. J. He was formerly a second lieutenant in the 15th U. S. Cavalry; from 1907 to 1910 at Fort Ethan Allan, Vt., and from 1910 to 1913, at Fort Leavenworth, Kan.

Missing Man.

Any one having information regarding the present whereabouts of Jules Lemoine, a Belgian subject, at one time employed as a laborer on the Canal, is requested to communicate with the Belgian Consulate at Panama.

HOUSE-TO-HOUSE CANVASS.

Enumeration by Police Shows Decrease of Canal Zone Population.

The house-to-house canvass of the population of the Canal Zone, taken between June 16 and June 30, 1914, by the Police and Fire Division, shows the total population of the Zone to be 37,706. Of this number, 6,704 are white American men, of whom 4,482 are employees of The Panama Canal or the Panama railroad. The American women and children number 1,574 and 1,535, respectively. Of all other nationalities there are 16,694 men, including 14,066 employees, and 5,674 women and 5,525 children. The figures do not include employees living in Colon and Panama.

The primary purpose of the enumeration was to check up the progress of the depopulation of the Canal Zone of others than employees and their families.

The census of the Canal Zone made between February 1 and March 31, 1912, by the old Department of Civil Administration, showed a total population in the Zone proper of 61,279. The decrease since that time has been 23,573. The decrease amounts to about 38 per cent of the population of February-March, 1912, or over 61 per cent of the present population.

The police canvass was made by the three districts known as Ancon, Empire, and Cristobal. Following are the details of the enumeration:

A police census made between January 31 and February 10, 1914, did not differentiate between employes and nonemployes. It enumerated American men, women, and children, of which there were, respectively, 6,310, 1,799, and 1,786, a total of 9,895; and all other men, women, and children, 21,332, 7,325, and 6,744, respectively, a total of 35,401. The grand total of inhabitants was 45,296. The total number of Americans on the Zone has decreased 82 since then. The total population of other nationalities has decreased 7,508. The total decrease in the

period of less than five months has been 7,590.

The canvass showed the complete depopulation of Culebra Island labor camps, Pedro Miguel rural districts, east and west of the Canal, Cerro Salado, Cartagenita, Japanese Village, Hongkong, Cerro Gordo, Buena Vista, Caballo Viejo, Virgin, rural district between Ancon-Empire line and Empire-Chorrera road, Dump No. 6, rural district between the Chagres River and the Empire-Cristobal line, the rural district around Margarita Point, and the American village at Porto Bello.

BAN ON OPIUM FOR SMOKING.

Recent Legislation Forbids Its Transport on Waters of United States or Its Possessions.

Sections 5 and 6 of the Act of Congress, approved June 17, 1914, entitled "An Act to amend an Act entitled 'An Act to prohibit the importation and use of opium for other than medicinal purposes,'" approved February 9, 1909, are applicable to the Canal Zone.

Section 5 of the Act declares that no smoking opium, or opium prepared for smoking, shall be admitted into the United States, or into any territory under the control or jurisdiction thereof, for transportation to other countries, nor shall such opium be transferred or transhipped from one vessel to another vessel within any waters of the United States for immediate exportation, or any other purpose.

Section 6 of the Act prohibits any person under the jurisdiction of the United States to export smoking opium, or opium prepared for smoking, from the United States, or from any territory under its control or jurisdiction, or from countries in which the United States exercises an extraterritorial jurisdiction.

The prohibition against smoking opium under the new legislation is absolute. Opium in any other form may be exported from any place under the jurisdiction of the United States only in the manner authorized by the regulations to be promulgated from time to time by the Secretary of State of the United States. The law makes it the duty of the Secretary of State of the United States to conform the regulations to be promulgated by him to those of the respective countries to which opium is to be exported.

The Canal Zone is considered within the meaning of this Act as territory under the control and jurisdiction of the United States, therefore, the introduction of smoking opium for transportation or transshipment beyond the limits of the Canal Zone is prohibited, and the exportation of smoking opium from the Canal Zone is absolutely prohibited. In conformance with the provisions of this Act, the Canal Zone authorities, by direction of the Governor, have been instructed to hereafter prevent the introduction of smoking opium into the Canal Zone. The Act imposes severe penalties and confiscations upon those violating any of its provisions.

The shipping interests engaged in traffic with the ports of the Canal Zone will be advised that smoking opium will not be admitted into these ports, either to remain within the Canal Zone, or for the transportation or transshipment beyond the lines of the Zone, and that failure to observe the provisions of the Act will result in the imposition of fines and penalties upon the offending parties.

The Republic of Panama has already taken measures to prevent the introduction of opium, except for medicinal purposes, into the Republic, by the enactment of law No. 46 of December 20, 1912. This law not only prohibits the importation of opium, except for medicinal purposes, but the smoking of opium in the Republic, as well. Further, the sale of opium in the Republic, except for medicinal purposes, after January 1, 1913, was absolutely prohibited.

Order of Isthmian Conductors.

The next regular meeting of the Order of Isthmian Conductors will be held at the Moose lodge hall, old Normandie building, Panama, on Sunday, July 19, at 2 p. m. Members are requested to note change in time and place.

OFFICIAL CIRCULARS.

Act of Congress.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 30, 1914.

CIRCULAR No. 600-4:

REPEAL OF TOLLS EXEMPTION FOR COASTWISE VESSELS.

The Act of Congress quoted below is published for the information of all concerned.

GEO. W. GOETHALS,
Governor.

AN ACT to amend Section 5 of "An Act to provide for the opening, maintenance, protection, and operation of The Panama Canal, and the sanitation and government of the Canal Zone," approved August 24, 1912:

1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second sentence in Section 5 of the Act entitled "An Act to provide for the opening, maintenance, protection, and operation of The Panama Canal, and the sanitation and government of the Canal Zone," approved August 24, 1912, which reads, as follows: "No tolls shall be levied upon vessels engaged in the coastwise trade of the United States," be, and the same is hereby, repealed.

2. Section 2. That the third sentence of the third paragraph of said section of said Act be so amended as to read, as follows: "When based upon net registered tonnage for ships of commerce the tolls shall not exceed \$1.25 per net registered ton, nor be less than 75 cents per net registered ton, subject, however, to the provisions of Article 19 of the Convention between the United States and the Republic of Panama, entered into November 18, 1903: "Provided, That the passage of this Act shall not be construed or held as a waiver or relinquishment of any right the United States may have under the Treaty with Great Britain, ratified the 21st of February, 1902, or the Treaty with the Republic of Panama, ratified February 26, 1904, or otherwise, to discriminate in favor of its vessels by exempting the vessels of the United States or its citizens from the payment of tolls for passage through said Canal, or as in any way waiving, impairing, or affecting any right of the United States under said treaties, or otherwise, with respect to the sovereignty over or the ownership, control, and management of said Canal and the regulation of the conditions or charges of traffic through the same.

Approved June 15, 1914.

Division of Erection Abolished.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 6, 1914.

CIRCULAR No. 660-18:

Effective at the close of business on the 15th instant, the Division of Erection will be discontinued. The duties hitherto assigned to that division will be continued under the supervision of the Engineer of Maintenance, as follows: The completion and operation of the locks; the installation, erection, testing, operation, and care of the operating and protective machinery of the locks and the Miraflores spillway; and the handling of vessels while in the locks; all by the superintendents of the locks, each for his own district; the construction of power plants and transmission line and the operation of the Gatun spillway, by the Electrical Division. The central office designing, drafting, and clerical forces will be under the supervision of the Engineer of Maintenance.

GEO. W. GOETHALS,
Governor.

Retirement of Equipment.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., July 10, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

It is desired that a program be arranged in accordance with the requirements of departments and divisions that will enable action to be taken as regards retiring all unserviceable or surplus unloaders, plows, spreaders, and trackshifters. I quote, as follows, from report of the superintendent of railroad transportation on this matter, made at my request, dated July 8, and append hereto copy of a table showing the condition and recommendations relative to the various kinds of equipment:

"Only two of the plows in the service of this department are in first-class condition, but all of the plows now stored at Gamboa belonging to the Supply Department are good, and I believe it would be advisable to return six of these plows to service. All of the equipment to be retained in the service should be given a general overhauling before being put into regular service.

"As far as I am able to ascertain, the following will be sufficient for the future requirements of the service: Six unloaders, four spreaders, three trackshifters, eight plows."

The above recommendation covers only equipment

under the superintendent of railroad transportation. In order that the program may embrace all departments and divisions, it is desired that you forward to me, not later than the 15th instant, a report stating the minimum number of unloaders, plows, spreaders, and trackshifters, which will be required for your work during the balance of this year, together with any comment that is considered necessary in explanation thereof.

GEO. W. GOETHALS,
Governor.

Leave Regulations.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 1, 1914.

CIRCULAR No. 602-8:

ANNUAL LEAVE DUE AT TERMINATION.

1. When, after having served less than 10 months of the service year, an employee's service is terminated due to reduction of force, he may be granted a

leave of absence with pay not to exceed two days for each full month served during his service year, less the annual leave previously charged to him for that service year, and may be paid for the same without again reporting for duty.

2. If he voluntarily resigns before having served 10 months of his service year, he may not be granted any leave unless he shall have been in the service one year or more, in which case he may be allowed the same leave as though discharged on account of reduction of force.

3. If discharged for misconduct or unsatisfactory service, no annual leave whatever will be granted, but his service will terminate on the day of his discharge.

4. These rules shall be effective July 1, 1914.

GEO. W. GOETHALS,
Governor.

Accountable Officials.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., July 6, 1914.

CIRCULAR No. 66:

Effective at once, Mr. W. R. Holloway, supervisor Division of Erection, is designated an accountable official of The Panama Canal.

H. A. A. SMITH,
Auditor, Panama Canal.

Approved:
GEO. W. GOETHALS,
Governor.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., July 6, 1914.

CIRCULAR No. 67:

Effective at once, Capt. W. F. Endress, superintendent, Atlantic locks, is designated an accountable official of the Panama Canal.

H. A. A. SMITH,
Auditor, Panama Canal.

Approved:
GEO. W. GOETHALS,
Governor.

Transfer of Employees and Their Effects.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., July 13, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

When an employee on the silver roll is transferred permanently from one station to another at the instance of his department, the district quartermaster will furnish his family a railroad pass to the point to which he has been transferred, and will arrange to ship his household effects on Panama Canal billing.

In all such cases the employee will be furnished a memorandum to the district quartermaster stating that he is being permanently transferred.

GEO. W. GOETHALS,
Governor.

Mail for Chief Timekeeper to be Handled Through Balboa Heights Post-Office.

TO ALL CONCERNED:

As published in THE CANAL RECORD, under date of July 8, the timekeeping offices were removed to the new Administration Building on July 15, 1914. All mail for the chief timekeeper should be addressed to him at Balboa Heights, instead of to Balboa.

Approved:
C. A. MCILVAINE,
Executive Secretary.

Acting Local Agent and Acting Steamship Ticket Agent, P. R. R.

PANAMA RAILROAD COMPANY,
OFFICE OF SUPERINTENDENT,
COLON, R. P., July 9, 1914.

CIRCULAR No. 108:

Effective July 10, 1914, Mr. C. J. King will act as local agent at Colon during the absence of Mr. J. C. Warren, and Mr. E. G. Booth will act as steamship ticket agent vice Mr. C. J. King.

J. C. ANGEL,
Freight and Passenger Agent.

Approved:
C. H. MOTSETT, Superintendent.

Time of Departure of the "Louise" for Taboga.

CRISTOBAL, C. Z., July 8, 1914.

TO ALL CONCERNED:

On account of train No. 3 arriving in Panama at 8.35 a. m. under the new time table, instead of 9.20 a. m., as formerly, the sailing time of the launch Louise from the dredge landing for Taboga on Monday, Thursday, and Saturday, will be changed from 9.50 a. m., to 9.10 a. m., effective with the boat sailing on July 18, 1914.

F. O. WHITLOCK,
Asst. Chief Quartermaster.

FOUND—A canoe. Owner can have same upon proper identification to the police at Empire, C. Z.

COMMISSARY DEPARTMENT.

Sale of Shoes.

A sale of shoes will be held at the commissaries enumerated below on the dates shown:
Ancon, July 20 to 25, inclusive.
Balboa, July 28 to August 1, inclusive.
Pedro Miguel, August 4 to 8, inclusive.
Cristobal, August 11 to 15, inclusive.

Commissary Deliveries.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., July 2, 1914.

CIRCULAR No. 102-1:

To district quartermasters and commissary storekeepers—
We will deliver peaches, plums, pears, apricots, and strawberries at our own risk.

R. E. WOOD,
Chief Quartermaster.

Prices of Beef.

THE PANAMA CANAL
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., July 15, 1914.

CIRCULAR No. 587:

Commissary storekeepers—Effective July 16, 1914,
"Special" and "Choice" grades of beef will be sold at all commissaries at the following prices:

	Special. Pound. \$.12	Choice. Pound. \$.15
Beef, chuck roast, 3 lbs. and over.....		
Beef, rib roast, second cut, not under 3½ lbs.....	.16	.21
Beef, rib roast, first cut, not under 5 lbs.....	.19	.24
Beef, pot roast.....	.20	.25
Beef, rump roast.....	.20	.25
Beef, porterhouse roast.....	.22	.27
Beef, steak, chuck.....	.13	.16
Beef, steak, round, bottom.....	.13	.17
Beef, steak, round, top.....	.15	.19
Beef, steak, rib.....	.20	.24
Beef, steak, sirloin.....	.20	.25
Beef, steak, rump.....	.20	.25
Beef, steak, sirloin, choice cut.....	.23	.28
Beef, steak, porterhouse, not less than 1½ lbs.....	.23	.30
Beef, steak, porterhouse, short, Delmonico.....	.20	.25
Beef, steak, tenderloin, Western.....	.35	.40

All suet, stew, soup, and plate beef will be sold at old prices.

"Special" grade beef comes from lighter weight carcasses than "Choice" grade, but is, nevertheless, a good grade of beef.

F. O. WHITLOCK,
Asst. Chief Quartermaster.

Commissary Hours.

The commissary stores are open during the following hours: From 8 a. m., to 12.30 p. m., and 3 to 6.30 p. m.
The gold departments of the Cristobal store will open at 2 p. m., on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open until 7 p. m.

Labor Charges in Preparation of Roasts, Etc.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., July 7, 1914.

CIRCULAR No. 137-2:

To assistant chief quartermaster, the depot commissary, district quartermasters, and commissary storekeepers.—
It appears that the present labor charges for the preparation of crown roasts, mutton saddle, French lamb chops, tenderloin roast, larded, and rib roast, boned and rolled, are too high.

The following table shows the actual maximum and minimum labor cost, the present charge (at six cents per pound) based on 6-pound roasts, and the proposed charge, to become effective at once:

CLASS.	Actual labor cost.		Present charges.	Proposed charge.
	Maximum.	Minimum.		
Crown roasts.....	90 cents each	45 cents each	\$1. each	60 cents each under 10 lbs.
Mutton saddle.....	30 cents each	15 cents each	36 cents for 6 lb. roast	15 cents each under 10 lbs.
Tenderloin roast, larded.....	20 cents each	15 cents each	36 cents for 6 lb. roast	15 cents each under 10 lbs.
Rib roast, boned and rolled.....	30 cents each	7 cents each	36 cents for 6 lb. roast	15 cents each under 10 lbs.
French lamb chops.....	7½ cents per lb.	4 cents per lb.	6 cents per lb.	5 cents per lb.

In addition to the labor charge, the actual cost of material used will be charged. The rate for French lamb chops is based on original weight. On roasts, weighing in excess of 10 pounds, the actual time should be computed and charged.

R. E. WOOD,
Chief Quartermaster.

Married.

BRINKERHOFF-REEVES—On Sunday, July 5, at Christ Church, Colon, by the Rev. E. J. Cooper. France Reeves of Columbus, O., to G. L. Brinkerhoff

of Mansfield, O. Canal Zone residence, Empire, C. Z.

Lost—On Friday, July 3, between Dock 11 and Cristobal fire station, a large opal, Reward, if returned to H. C. Adams, ticket agent, Colon passenger station.

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

GENERAL.

The total membership of all the clubhouses on June 30 was 1,743; the following is a summary of the activities during the month of June:

Total number of bowling games.....	10,898
Total number of pool games.....	25,170
Number of players in tournaments.....	154
Number of library members.....	985
Number of books withdrawn.....	1,335
Total attendance at entertainments.....	7,474
Total receipts from all activities.....	\$7,007.04

The motion picture schedule for the week July 20 to 25 is, as follows: Monday, Cristobal; Tuesday, Balboa; Wednesday, Corozal; Thursday, Pedro Miguel; Friday, Gatun; Saturday, Culebra.

BALBOA.

Ten men have entered in the checker tournament to be started Friday night, July 17. After the tournament is decided, a team will be chosen to play the teams from other clubhouses. Following is the list of local entries: Walmack, Watson, Barnes, Heller, Hulsebosch, Nicemonger, Clark, Williams, Flexstein, and McEwen. Entries will be open until Friday night.

The new phonograph records for July have arrived. New cues and new cloth for one of the pool tables have been ordered from the United States.

Members are invited to suggest new books to be included in an order now in preparation.

COROZAL.

A duckpin tournament was held between Pedro Miguel and Corozal on Friday, July 10, resulting in three successive victories for the latter.

The high scores on the alleys for the past week were: Duckpins—Thirsk, 119, 103; Kiley, 117, 102; Harper, 106; Parks, 104; Seebt, 101; Ruggles, 100. Tenpins—Thirsk, 236, 233, 224, 221, 214; White, 227, 200; Territtier, 210; Davis, 209; Hall, 207; Ruggles, 205.

Mr. G. N. Thirsk has challenged all comers for the championship of the Zone Y. M. C. A. in tenpins, best four games out of seven, to be played on the Corozal alleys, with return match on any other alleys. All acceptances are to be sent to the secretary of the Corozal clubhouse.

Moving pictures will be given on Saturday, July 18.

PEDRO MIGUEL.

The local pool tournament closed Wednesday evening, July 8, with the following results:

Name.	Won.	Lost.	P. C.
Eggleston.....	6	1	.833
Weiben.....	5	2	.714
Ludlum.....	2	2	.500
Campbell.....	2	2	.500
Murray.....	1	3	.250
Abramson.....	0	4	.000

The tournament resulted in a tie between Eggleston and Weiben, and Eggleston won the final play-off. A gold medal will be given for first place, and a silver medal for second.

The pool and billiard managers are arranging for a local handicap tournament in billiards. All those interested in billiards are invited to join this tournament.

A boys' bowling tournament will be started soon. Teams of three or four boys each will be arranged, and in this way it will be possible to average the players more evenly. All the boys are invited to join the tournament.

High scores made in duckpins for the past week were, as follows: Braw, 113; Piper, 113; Lore, 105; Whistola, 104; Holloway, 102; Taylor, 101. In tenpins the highest scores were made by Farrar, 202, and Taylor, 200. The ladies' high score in rubber band duckpins was made by Mrs. Landers, 100.

A boy scout troop will be started if there are enough that care to join. The first meeting will be held Friday evening at 7.30, to formulate plans. Mr. Ira W. Dye is working on the organization.

On Wednesday evening, July 8, a "Father and son" banquet was held at the local clubhouse for all the boys and their fathers. Over 50 were present. After the dinner, Dr. Darling of Ancon Hospital spoke about his experiences in South Africa, and showed some interesting photographs of the country and people. Sixteen different States were represented at the banquet.

On Wednesday morning, July 15, a boys' athletic meet was held with Corozal at Pedro Miguel. This is the first of a series of meets that will be held between the two towns. The town winning two out of three meets will be awarded an appropriately inscribed shield. The boys are divided into two classes, those over 90 pounds, and those under 90 pounds. All the school boys of both towns are eligible for these meets.

CULEBRA.

On Saturday night, July 11, the Cristobal chess club was entertained by the local association. The Culebra team won 18 points against the visitors' six. Messrs.

Brown, L. E. DuBois, Stevens, and Fleury represented Cristobal, while Messrs. Wm. Dubois, Warner, McClure, and Héle played for Culebra. The checker club was to have played, but owing to the nonappearance of the Cristobal checker players, the game was cancelled. The Culebra chess and checker clubs are prepared to meet any other club at home, or elsewhere.

The local handicap bowling tournament will close on Wednesday, July 22. All those who have not completed the tournament are requested to do so before that date, or games remaining unfinished will be forfeited, and the games of those who have rolled a portion of the games scheduled will be cancelled. Those still having games to roll off with others who will not appear against them can roll the game and same will count in their favor as having completed the tournament.

EMPIRE.

The Empire Y. M. C. A. was closed permanently on Tuesday night, July 14, with an entertainment, moving pictures, and "Open house." The clubhouse was first opened on May 28, 1907.

A farewell "Smoker" was given to a large house on Saturday night. The program follows: Motion pictures; baritone solo, F. J. Menery; monologue, L. A. Thompson; guitar and whistling, W. W. DeLaMater; balancing, R. L. DeFeet; baritone solo, F. J. Menery; wrestling, D. G. Westman and Martin Ludecke. The Tenth Infantry band played music throughout the evening.

The "Farewell" combination duck and tenpin tournament, which was started on Monday night, July 6, ended on Monday night, July 13. There were 16 entrants. Results were: High score in tenpins, H. Rodeghiero, 204; high score in duckpins, H. Rodeghiero, 105; high average, H. Rodeghiero; second high average, C. J. Huson.

GATUN.

Two hundred and twenty-three soldiers have enrolled as members at the Gatun clubhouse. At present, there is exactly the same number of civilians on the rolls. The total of 446 gives Gatun the largest clubhouse membership on the Isthmus.

A unique affair was held at the Y. M. C. A. on Saturday evening, July 11, when an old fashioned German social and party was held. The hall was specially decorated for the occasion with German and American flags, potted flowers, etc. The following program was given almost entirely in German: Opening selection, orchestra; address of welcome, Secretary Smith; response, Herr Aufenwasser; soprano solo, Mrs. Weiss; tear solo, John Klinger; selection, orchestra; comedy, Weiss and Stamm; recitation, Silvia Edwards; quartette, "Demag"; violin imitation, Herr Stamm; "Die Wacht am Rhein," by all present; recitation, Emil Weiss; selection, orchestra; "America," by all present. German refreshments were served, and a Deutsches Sengerfest was held. About 60 German speaking people attended.

A farewell reception was given at the clubhouse on Tuesday evening, July 14, in honor of Companies A and C of the Tenth Infantry, who have since returned to Camp Otis. The Tenth Infantry band gave an outdoor concert at 7.30, which was followed by a basketball game between civilians and soldiers. An entertainment was given on the first floor, in which many of the soldiers participated. Refreshments, consisting of home made cakes and punch, were served.

Rogers and Rothgeb represented Gatun at Cristobal in the interassociation bowling tournament held on Saturday evening, July 11.

CRISTOBAL.

The ragtime bowling tournament held on July 8, consisting of three different games, duckpins, candlepins, and cocked hat, was won by Parker, with a total pinfall of 206. Pinney was second, 205, and Steele was third, 196.

The all-star duckpin tournament held on Saturday, July 11, was won by Cristobal. Corozal won second place by one pin on the roll-off, which was decided by each man rolling three frames. The scores were:

Cristobal..Pinney.....	105	77	87—269
Smith.....	101	95	101—297—566
Davis.....	78	96	95—269
Simms.....	72	81	120—273—542
Empire...Lowande.....	95	89	87—271
Henry.....	86	96	89—271—542
Gatun...Rogers.....	86	92	76—254
Rothgeb.....	74	78	86—238—492

High duckpin scores for the week were made by Sims, 120; Gill, 113; and Smith, 101. High tenpin scores for the week were made by Collins, 224; Russell, 212, and Strong, 212. A tenpin ragtime tournament will be started this week.

The "Doves" defeated the "White Sox" on Thursday night, July 9, at indoor baseball, by the score of 9 to 8.

Gymnasium classes will be conducted on Tuesday, Thursday, and Saturday nights of the week beginning July 20. Culebra has been challenged to a volleyball match as a part of the class for Saturday, July 25.

MOVEMENTS OF OCEAN VESSELS.

The following is a list of sailings and scheduled arrivals of the Panama Railroad Steamship Line; of the Royal Mail Steam Packet Company; of the Hamburg-American Line, and of the United Fruit Company's Line:

Sailing of the "Ancon."

PANAMA RAILROAD COMPANY,

OFFICE OF SUPERINTENDENT,

COLON, R. P., July 11, 1914.

CIRCULAR No. 438:

All concerned—The sailing date of the steamship Ancon has been set for Friday, July 17, at 3 p. m., from Pier 9, Cristobal, C. Z.

C. H. MOTSETT,
Superintendent.

Movement of Vessels at Port of Balboa.

The arrivals and departures of steamships at the port of Balboa for the week ending July 11 were, as follows:

Arrivals—July 5, *Orcoma*, from Valparaiso; July 6, *Manasi*, from Guayaquil, *Huallaga*, from Callao, *Quito*, from Guayaquil; July 9, *Danara*, from San Francisco, *San Juan*, from San Francisco; July 10, *Salvador*, from Salina Cruz.

Departures—July 6, *Huasco*, to Valparaiso, *Mantaro*, to Callao; July 8, *Newport*, to San Francisco; July 9, *Orcoma*, to Callao; July 11, *Quito*, to Callao.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employes of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,

THE CANAL RECORD,

Ancon, Canal Zone,

Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Work on Dry Dock No. 2 at Balboa Stopped.

On account of a lack of funds, the building of dry dock No. 2 has been abandoned for the present, and the appropriation will be husbanded for the completion of the rest of the terminal facilities at the Pacific entrance. No. 2 dry dock was to have been 72 feet wide at the entrance by 360 feet long, and to have been used as an auxiliary to the large dry dock, No. 1, which will be 110 feet wide at the entrance by 1,000 feet long. Up to the time work on it was stopped, 93,667 cubic yards of excavation, mostly rock, had been performed on the site, bringing the excavation to 85 per cent of completion. It is anticipated that the smaller dry dock will be completed at some future date, and that the present excavation may be preserved by extending slightly the cofferdam which is now keeping out the sea, to meet the guide wall to be constructed along the north side of the entrance basin of the larger dry dock.

Construction of Berth for Oil Vessels at Pacific End.

In connection with the permanent fuel oil handling plant at the Pacific entrance to the Canal, authority has been granted for the construction of a suitable berth, off the Balboa dump, at which vessels may moor to discharge or take on oil. The seagoing suction dredge *Culebra* has been engaged in the past month in dredging a mooring basin. The basin will be alongside the Canal channel and will have a clear width of 75 feet, a length of 2,000 feet, and a depth of 45 feet at mean tide. The natural bottom at the site is sloping, but the average elevation is approximately plus 30 feet; the necessary excavation will run, accordingly, between 80,000 and 100,000 cubic yards. The inner end of the berth will be opposite Canal station No. 2290, and about 1,100 feet south of the present mooring place for vessels of the Union Oil Company. It will be about 1,200 feet from the edge of the dump.

Work will be begun shortly on the construc-

tion of two cribs alongside the basin, and it is expected to build a third later. Each crib will consist of a reinforced concrete platform, 60 by 30 feet, with its top at 13 feet above mean sealevel, supported on nine 6-foot caissons, arranged in a square, three rows each way on 27-foot spacing. The extra width of the support, beyond the width of the platform, is to afford stiffness. The tops of the caissons will be connected by steel girders and suitable bracing. The caissons will be steel cylinders, driven to rock and several feet into rock, a total penetration of about 10 feet, and filled with reinforced concrete. They are to be of the same type as those used in Section e-f of the quay wall at Balboa. The water fronts of the cribs will be protected by pile fenders, and clusters of piles in line with the fronts of the cribs will be spaced at intervals between them.

Progress on Balboa Shops Office Building.

The laying of the roof on the permanent office building at Balboa shops was begun on Saturday, July 18. The roof will be of cement tile, finished on the outside in red, like the roofs of all the other buildings at the shops, except the locomotive roundhouse and pattern storage building, which have flat roofs of reinforced concrete. Material will be taken from the 30,000 pieces left in storage at Paraiso when the contractor finished the manufacture of 123,000 pieces to be used for the shops buildings and extra orders. Approximately 2,000 pieces will be used on the office building roof, covering 12,000 square feet.

The cornice forming the eaves of the roof, projecting four feet six inches beyond the walls and colonnades of the building, was completed, with the exception of the surface finishing, on Thursday, July 16, when the last of the forms, by which the concrete of the cornice was molded, were removed. All of the concrete for the building, except a small quantity for the stairs, which will be mixed by hand, has been placed and the portable mixer was removed during the early part of this week. The various walls, of hollow concrete blocks, have been erected, on an average, about midway between the second and top floors.

Preparations for Completing Transmission Line.

The foundations for the last of the standard track-span bridges of the 44,000-volt transmission line were completed in the first part of last week and the steel was erected on July 16. This bridge is situated adjacent to the Cristobal substation and is the northernmost tower of the system. Its erection has been delayed by the hydraulic filling of the area around the substation.

Contract for the fabrication and delivery at Colon of five special towers, of extra height, has been awarded to the United States Steel Products Company, which was also the contractor for the 827 standard bridges. Two of

these high towers will be used for carrying the transmission line across the dry dock at Mount Hope, and three will be used in crossing the tracks of the Panama railroad into the Balboa substation. These towers are to be 84 feet high, carrying the wires 78 feet above the ground, as compared with a height of 40 feet over all on the regular track-span bridges, which carry the wires 30 feet above the ground. In design, the high towers are somewhat similar to the track-span bridges, with cantilever brackets to support the three power wires. Each of the special bridges is to weigh about 17 tons and will cost approximately \$1,500. Delivery is due in the early part of September, 1914.

Pushing Work on Transformer Substations.

The erection of the steel frames for the four substation buildings of the transisthmian electric transmission system was completed on June 27, when forces of the United States Steel Products Company finished the frame of the Balboa station. Excavation for the foundations of this station began on May 1, 1914, following delay in the determination of the site, and the work on it has been pushed, in order that this station may be completed with the rest of the system. The concrete for the base of the roof is now completed, and the erection of the walls of hollow concrete blocks has been begun. The first electrical work at this station was begun about three weeks ago, in the placing of conduits in the concrete floors.

The building at the Gatun station, which was begun on November 28, 1913, is now practically completed; the plastering of the walls inside and out and the inserting of the windows is about 60 per cent complete. The electrical installation is about 70 per cent completed, and is to be finished in the latter part of August.

At the Miraflores station, for which excavation was begun on December 4, 1913, the walls and roof have been completed, and the interior plastering is in progress. The electrical installation is about 40 per cent completed.

At Cristobal, where the foundation work began in March, 1914, the roof is about 80 per cent completed, and the walls about 90 per cent. The installation of the transformer equipment was begun in the first week in July.

Private Hospitals Prohibited.

In order to keep the public health in the cities of Panama and Colon under a central control, with the approval of the Governor, the Chief Health Officer on July 9 issued a circular which has for its aim the suppression of all privately conducted hospitals in those cities. It reads, as follows:

By virtue of the authority vested in me by Presidential Decree No. 23 of July 19, 1904, I hereby establish the following health regulation for the cities of Panama and Colon:

Whereas, the maintenance of private hos-

pitals in the cities of Panama and Colon will seriously interfere with the supervision and control of this department over sanitary matters in said cities.

Therefore, be it ordered that no private hospitals shall be established or maintained in the cities of Panama or Colon, and any such hospital now being conducted in either of said cities shall be discontinued upon the promulgation of this order. Any person who, as a physician, owner, manager, or person in charge of any private hospital in the city of Panama or the city of Colon, shall establish or maintain any such hospital after the promulgation of this order, shall be fined in a sum not exceeding \$500 for each and every day such hospital shall be so maintained, such fine to be enforced in the manner provided for the imposition and collection of fines for violations of the *Sanitary Rules and Regulations* for the cities of Panama and Colon.

This order shall take effect from and after its publication in the *Official Gazette*.

A copy of the above circular has been forwarded by the Executive Secretary to the Secretary of Foreign Relations for Panama, with the request for its publication in the *Gaceta Oficial* of the Government of Panama.

Contract for Watch Inspection.

Effective July 1, 1914, the Panama Railroad Company has entered into contract with J. L. Kerr for the inspection of watches of employes of the Panama railroad and The Panama Canal, and the regulation and repair of chronometers and master clocks. An office is to be provided at Balboa, and the inspector or his qualified assistant is to be accessible there daily between 8 a. m. and 8 p. m., except that on the 3d, 4th, 5th, 24th, 25th, and 26th of each month, the hours are to be from 8 a. m. to 9 p. m. In addition, an inspector is to be accessible in the railroad yards at Panama between 8 a. m. and 9 p. m. on the 7th, 8th, and 23d of each month, and in the yards at Colon between the same hours on the 6th, 7th, 24th, and 25th of each month.

The watch inspector pays the Panama railroad \$1 per annum, and, as compensation for the service, receives free family quarters, with bachelor quarters for his assistant, and hotel, commissary, and hospital privileges for both. Under the former contract for watch inspection, the compensation included, in addition to the above, a salary of \$200 per month for the inspector.

Overhauling Lidgerwood Flat Cars for East Breakwater Service.

The work of repairing and placing in good condition 250 surplus and retired Lidgerwood flat cars, for use in hauling rock to the east breakwater at Colon, was begun on July 7 at Balboa shops. It is expected that a total of about 700 of these cars will be required in the service, but the present order calls for only 250, which will be supplemented with additional equipment, as required. The overhauled cars are being turned out of the shops at the rate of about five per day. They are to be placed in service, transporting rock from the Sosa Hill quarry at Balboa, about August 1.

The repairs to the cars include, in addition to the replacement of the floors with 3½-inch oak, several alterations which experience has shown to be desirable in heavy rock hauling. The 12-inch extension boards, by which the width of the cars has been extended beyond that of the regular commercial flat cars, will be replaced by two 70-pound steel rails, as was done on the Lidgerwood cars used at the

Porto Bello quarry. In addition, the outside sill will be stiffened. This will be done by inserting between the regular outside sill (five by 14 inches in section), and the adjacent five by 9-inch timber, an extra five by 14-inch sill and a 1-inch filler, all to be bolted together. The center sill will also be strengthened by placing next to it a five by 9-inch timber, running the length of the car. Where new aprons are to be placed on the cars they will be not less than half an inch in thickness, and the connecting bolts, formerly ¾-inch, will be made not less than ¾ or 1-inch in diameter, with a corresponding increase in the connecting links. A number of the lighter links and bolts failed on the Toro Point work.

The overhauled cars are being painted black and stenciled on the outer sills with a white lozenge containing the letters "E. B." The estimated cost of placing them in good condition is approximately \$250 each.

Protective Measures where Railroad Tracks are Crossed by Street Cars.

On July 8, car No. 23 of the Panama Tramways Company, manned by Philip Stewart, a Jamaican, as conductor, and Rafael Castillo, a Spaniard, as motorman, collided with the tender of a Panama Canal locomotive at the Balboa railroad crossing, fortunately without injuring any of the passengers, and only slightly damaging the car. The tramway company, in view of this and other similar narrow escapes in the past, both at the Balboa and Tivoli railroad crossings, despite rigid instructions to its conductors and motormen, and to the penalties that have been imposed, has decided to install protective devices; those at the Balboa crossing will consist of a trough to be used on the overhead to prevent a car from becoming stalled, and a system of derails, provided with operating levers, which will be placed on each side of the crossing. The operation of the latter mechanism will compel the conductor to leave the car each time it arrives at the crossing and ascertain if the track is clear. Derails will also be placed at the tramway crossing of the railroad which serves the Ancon commissary. With the installation of these protective measures, it is believed, the danger from crossing accidents at the above points will be reduced to a minimum.

In addition to the above, arrangements are being made to draft an Executive Order, which will be presented for the approval of the President of the United States, which Order will render conductors and motormen disregarding the company's rules liable to

Estates Being Settled.

The following estates of deceased employes of The Panama Canal or the Panama Railroad Company are now in process of settlement by the office of the Administrator of Estates, Ancon, C. Z., and any claims against these estates, or any information which might lead to the location of heirs, or to the recovery of property, bank deposits, postal savings

imprisonment in the Canal Zone, or a heavy fine, or both, in the discretion of the Court.

PERSONAL.

Mr. Ernest E. Lee resigned as superintendent of erection in the Division of Erection of the office of the Engineer of Maintenance on Wednesday, July 15, and sailed for New York on the steamer *Almirante*, on Thursday, July 16. He was appointed to the Canal Service as assistant engineer in the old Department of Lock and Dam Construction on December 2, 1907, and was placed in charge, under the Electrical and Mechanical Engineer, of the drafting force for the preparation of the designs for the operating machinery of the locks, and plans for the Atlantic and Pacific generating stations. When the Department of Lock and Dam Construction was abolished, he was transferred to the electrical and mechanical subdivision of the First Division of the Chief Engineer's Office, and on December 1, 1909, he was promoted to the position of assistant electrical and mechanical engineer. On September 1, 1911, he was appointed superintendent of erection and placed in local charge of the installation of all of the operating machinery, and electrical equipment for locks, spillways, Gatun hydroelectric station, substations, and transmission line. Prior to his coming to the Isthmus, he was with the Commonwealth Edison Company of Chicago at two different periods, first, in 1902 and 1903, as draftsman, and again in 1904 and 1905, engaged in designing and inspection. During a part of 1903, he was employed by the American Blower Company of Detroit, as selling and ventilating engineer, and in 1906 and 1907, he was superintendent of mechanical, electrical, and building construction at Evansville, Ind., for John A. Radford of Chicago. His future address will be Stratford Apartment N., Evansville, Ind.

Metal Trades Council of Panama.

The next regular meeting of the Metal Trades Council of Panama will be held on Sunday afternoon, July 26, at 1.30 o'clock, in the Balboa clubhouse.

H. A. S. LEVERING, *Secretary*.

BALBOA, C. Z., July 20, 1914.

Fourth of July Programs.

A few copies of the official Fourth of July program may be obtained by those who were unable to attend the celebration upon application by letter to the Mount Hope Printing Plant, Cristobal, C. Z.

or postal money order deposits, or any other moneys due them should be presented at that office at once, in order that the estate may be settled as soon as possible. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once.

EXECUTIVE ORDER

Relating to Certain Duties of the Clerk of the District Court and His Assistant.

By virtue of the authority vested in me, I hereby establish the following Executive Order for the Canal Zone:

Section I. The Clerk of the District Court is *ex-officio* Registrar of Property of the Canal Zone, and, as such, is required to perform the duties heretofore exercised by, and imposed on the Registrar of Property, under preexisting laws of the Canal Zone; and the Assistant Clerk of the District Court shall have and exercise like powers in the name of his principal. The acts heretofore performed as Registrar of Property by the Clerk of the District Court, or by his Assistant, are hereby declared to be valid and binding.

Section II. The Clerk of the District Court and his Assistant, are authorized to perform the duties heretofore imposed on the Clerks of the Circuit Courts of the Canal Zone, in respect to the issuing and recording of marriage licenses, and other matters relating thereto. All marriage licenses heretofore issued by the Clerk of the District Court, or by his Assistant, are hereby declared valid and binding.

Section III. This Order shall take effect from and after this date.

WOODROW WILSON.

THE WHITE HOUSE,
July 3, 1914.

[No. 1975.]

Premature Explosion at Base of Cucaracha Slide.

Three white Americans and one Jamaican, employes on the drill barge *Teredo*, were killed, one American and one Barbadian are missing, and one American and 13 West Indians were injured as the result of a premature explosion of dynamite which occurred at the base of Cucaracha slide, about 12.55 p. m., on Monday, July 20. The *Teredo* sank in about 30 feet of water.

The dead are: David Kett, master, of Amherstburg, Ontario, Canada; James F. Smith, blacksmith, of Philadelphia; Joseph W. Jones, engineer, of Amherstburg, Ontario, Canada, a brother-in-law of Kett; and James Springer, seaman, a brown Jamaican. Charles Sackett, drillrunner, of Parkersburg, West Virginia, and Evans Boyce, a black Barbadian, are missing, and it is believed that they are dead.

The dead, injured, and missing men were all employed on the *Teredo* and the casualties all resulted from the wrecking and sinking of the boat and not directly from concussion. The explosion occurred while the last of a group of eight holes which the *Teredo* had driven into a submerged rock was being charged with dynamite. The first indication was a gushing of water from the casing of the eighth hole, followed by an emission of dense yellow smoke. The explosion occurred about a minute and a half afterward, and in the meantime, two Americans, H. Shelton and Claude M. Brown, drillrunners, had run to the side of the *Teredo*, unslashed, and shoved away the barge on which the supply of dynamite was stored. This had floated about 30 or 40 feet away by the time the explosion occurred, and the dynamite was not detonated. The charges in the other seven holes than the one from which smoke was emitted were detonated, causing an upheaval which tilted the *Teredo* to one side and sank it. Within the roofed-over superstructure of the *Teredo*

was the plant for developing steam for the drills, and the general equipment of a small repair shop. The tumbling about of this equipment was responsible for most of the casualties. Of the 29 men employed on the vessel, only eight escaped injury.

The injured were rushed to Ancon Hospital as soon as possible on a special train. J. W. Jones died in the hospital about 7.30 p. m. of the same day. Another special relief train was run out from Panama. A diver was despatched to the scene by the Dredging Division to search for missing bodies and assist in the work of raising the *Teredo*. A derrick barge, moored alongside the wharf at Paraiso, was towed to the scene, and the craneboat *La Valley*, then at Toro Point, was summoned by telephone; it reached Gatun Locks at 2.30 p. m., and arrived at Cucaracha slide late in the evening. It is thought that the *Teredo* is considerably damaged, but that it can be removed from the channel without special difficulty.

The injured now in the hospital are Michael Koenig, white American, drillrunner, and the following West Indians: Adolphus Barber, oiler, and Louis Harper, David Liscott, Stanford Wilson, Newton Young, Simeon Labaric, James Wilson, Nathaniel Corbin, Arnold Green, Nathaniel Straker, Thomas Brown, Allen Glenn, and Samuel Cain, seamen.

Pilots' Licenses.

The following pilots' licenses were issued by the Board of Local Inspectors in June: John Wieshofer, unlimited-Atlantic; John Constantine, Frank W. Corning, A. W. Haynes, Niels Langvardt, Ralph Osborn, Charles Svensson, John Wieshofer, unlimited-all waters; John Wilkins, unlimited-Pacific; A. Pfisterer, 1,000 tons-Gatun Lake.

DAVID MARKS.

David Marks, one of the two American members of the Joint Land Commission, died at Ancon Hospital on Friday, July 17, at 5.15 p. m., of apoplexy. He was appointed a member of the commission by the President on May 9, 1914, and arrived on the Isthmus in company with Hon. Levi Monroe Kagy, the other American member, on May 15. The commission first met on May 25. Mr. Marks was a retired woolen manufacturer, 64 years of age, and was born at Rochester, N. Y. In 1869, he removed to Marion, Ind., and six years later, to Wabash, Ind., where his home had been ever since. He is survived by his wife and son living at Wabash, a married daughter, living at East Orange, N. J., and by a brother, Louis S. Marks, residing at Marion. He was a Royal Arch Mason, and a member of a number of other fraternal and benevolent societies, including the Odd Fellows, the Red Men, and the Elks. The body was shipped for interment at his former home on the *Panama*, on Wednesday, July 22.

The following resolution was adopted at the meeting of the Joint Land Commission held on July 18:

Whereas, the Supreme Being has seen fit to remove from our midst our beloved colleague, David Marks, at quarter past five o'clock on the evening of July seventeenth, in the year of our Lord, nineteen hundred and fourteen.

Be it resolved, that the Joint Land Commission, appointed by the President of the United States and the President of the Republic of Panama, greatly lament the sudden death of Commissioner David Marks, whose efficient services and pleasant associations dur-

ing the short period he was permitted to serve with us have endeared him to us, as a fellow commissioner and friend whom we shall always remember with the most profound respect.

The Joint Land Commission hereby conveys to the widow, and to the son, daughter, and family of Commissioner Marks, expressions of its most sincere condolence in their bereavement and sorrow at their loss of a husband and father.

Be it further resolved, that these resolutions be spread upon the minutes of the commission, and a copy thereof forwarded to the family of the deceased.

FERDICO BOYD, LEVI MONROE KAGY, S. LEWIS,
Commissioners.

Business of the Joint Land Commission.

While there will be no public hearings by the Joint Land Commission until further advice, the office of the secretary will be open as usual during the hours from 8 a. m., to 12 noon, and 2 p. m. to 5 p. m., daily, for the transaction of business and the receiving of any and all claims.

WILLIAM TAYLOR,

Secretary.

ANCON, C. Z., July 18, 1914.

Obituary.

Hugh G. Smith, a naturalized American and a former employe of The Panama Canal, died at Santo Tomas Hospital in Panama on Tuesday, July 14. He entered the Canal Service as an employe of the commissary at Empire on January 9, 1913, was promoted to the position of assistant storekeeper at Las Cascadas on April 1, 1913, and on June 6 of the same year was transferred to the mechanical and electrical subdivision of the First Division, where he was employed as a foreman. He was separated from the service on account of reduction in force on May 18, 1914. He served 12 years in the United States Army, and received an honorable discharge from the Tenth Infantry on January 7, 1913. He was 36 years of age, unmarried, and was born at Paisley, Scotland.

A cable message has been received stating that John J. Murphy, a passenger on the steamer *Advance*, which sailed from Colon on Wednesday, July 15, jumped overboard when the vessel was about 100 miles out from that port, and was drowned. His body was recovered. He was a former employe of The Panama Canal, and first entered the Service on February 26, 1907, as a foreman in the old Colon construction division. He separated from the Service on April 15, 1907, but was reemployed on July 29, 1908, continuing at work until July 2 of this year, when his employment as foreman in the Division of Terminal Construction was ended on account of reduction in force. He was born at Columbus, O., in 1868, and was unmarried. A sister, Mrs. Mary Doyle, resides at No. 101 Spruce street, Columbus, O.

William R. Johnson, an American non-employe, died at Santo Tomas Hospital on Wednesday, July 15. He was 30 years of age, and is survived by his wife, living in Panama. Interment took place in the Panama cemetery.

Admeasurement of Vessels.

The launches *Coco Solo* and *Aloha*, the latter belonging to a West Indian colony on the Rio Gatun, have been measured for Canal tonnage, but no certificates have yet been issued. Measurements for the following oceangoing vessels are being taken and the tonnage computed: *Santa Clara* of W. R. Grace and Company; *Salvador* of the Salvadorean Railway Company; *Limari* of the Compañia Sud-Americana de Vapores.

NEW WATER MAIN TO GAMBOA.

Award Made for Pipe—Bids to be Opened August 10 for Excavation of Trench by Contract.

The United States Cast Iron Pipe and Foundry Company has been awarded the contract for all of the cast iron pipe, and some of the fittings, required for the new water main to be laid from the south end of the Panama railroad bridge at Gamboa to the aeration basin of the new water purification plant on the hill immediately above the Miraflores spillway. This main will consist of 24-inch, 30-inch, and 36-inch diameter cast iron bell and spigot pipe to be laid in a trench paralleling the main line of the Panama railroad. The contract price of the pipe and fittings bid on was \$250,000, delivery to be made at Colon at the rate of from 2,000 to 2,500 tons a month, shipments to begin within five weeks of date of award. This will complete deliveries in about 150 days. The pipe to be furnished under this contract is, as follows: Two thousand one hundred lineal feet of 24-inch, Class C; 4,980 lineal feet of 30-inch pipe, Class A; 20,250 lineal feet of 30-inch pipe, Class B; 14,120 lineal feet of 30-inch pipe, Class C; 13,126 lineal feet of 36-inch pipe, Class A, and 5,880 lineal feet of 36-inch pipe, Class B. The Class A pipe is designed for an operating pressure at 100-foot head; Class B pipe for an operating pressure at 200-foot head, and Class C pipe for an operating pressure at 300-foot head. In connection with the above work, a contract has also been entered into with the Leadite Company of Philadelphia for 80,000 pounds of leadite at 11 cents a pound, amounting in all to \$8,800. Leadite is a proprietary article used as a substitute for lead, and comes cheaper than the latter.

Bids are being advertised for, and specifications have been prepared, for the digging of the pipeline trench by contract. Bids will be received on one basis only, viz., a flat rate per cubic yard of rock, and a flat rate per cubic yard of earth. Payments will be made monthly on the basis of the total number of cubic yards of rock or earth, or both, moved each month, measured in place.

The approximate lengths of trench for the 24-inch, 30-inch, and 36-inch pipe will be, as follows:

SIZE OF PIPE.	TRENCH.		
	Length. Feet.	Width. Inches.	Width. Feet.
24-inch.....	2,000	37	3.08
30-inch.....	39,020	43	3.58
36-inch.....	18,770	49	4.08

The widths given above are the minimum widths measured at top and bottom of each size of trench that will be allowed or accepted, and will be used as a constant dimension in estimating quantities of excavation for which payment is to be made.

In general, the trench will pass through hard Bas Obispo rock, soft clayey rock, soft and stiff red clay, loose hard trap rock car fill, and loose soft rock car fill. There will be 10,000 feet of trench, more or less, in hard or soft rock. Where the trench is located on uncleared ground, the contractor will be required to clear a right-of-way on each side of it for a space of 10 feet, which work will be considered part of the excavation proper. It is estimated that about 2,000 feet will have to be cleared. The right is reserved by The Panama Canal to locate the trench beyond

the limits of the cuts or fills of the railroad through sections where, in the opinion of the engineer in charge, it may be desired to do so. Such divergences, however, from the main line of the railroad, or from the spurs leading off from it, will probably not exceed 500 feet.

It is expected that most of the pipe will reach the Isthmus between September 1 and January 1, thus requiring the digging of the trench and the laying of the pipe during a part of what is generally the wettest time of the year. Some slides in the trench banks may, therefore, occur, and for this reason, the contractor will be required to carry on the excavation immediately in advance of the laying of the pipe, except as modified in reference to rock sections. This requirement is to be rigidly enforced, especially where the trench is to lie inside of the transmission tower foundations close to the roadbed.

The contractor will be given 30 days' notice to begin work, and he will be required to pursue operations simultaneously at each end. A minimum rate of 500 lineal feet of finished trench per day must be completed at each end of the line, or a total of 1,000 lineal feet for each day's work. Trench completed for a distance of more than 300 feet ahead of the pipe laying gang will be at the risk of the contractor, and any material sliding into it must be removed at his expense. In general, the right is reserved to require the contractor on one day's notice to increase or decrease the amount of trench completed in nine hours between the limits of 500 and 1,000 lineal feet at each end of the line. The contractor will not be required to dig the bell holes, or make the excavation for the valve boxes. All spoil must be placed on the side of the trench farthest away from the railroad, where practicable. Where dynamite is to be used, the contractor will not be allowed to load the holes, or fire the charges, except in the presence of an inspector of The Panama Canal. Damage to oil and duct lines will be repaired by The Panama Canal at the expense of the contractor.

The contractor must supply his own tools and equipment. Transportation of labor and material will be furnished by The Panama Canal without cost, but these privileges are limited to *bona fide* employees of the contractor, and some means of identification must be provided.

The bids, which will be opened at the office of the Chief Quartermaster at Culebra on August 10, must be accompanied by an acceptable bond, or by certified check, for \$12,000, United States currency, and the successful bidder will be required to execute a bond with approved security to be forfeited in case he fails to enter upon the contract within 30 days after the acceptance of his bid.

Pedro Miguel Y. P. S. C. E.

The young people of Pedro Miguel have organized a Christian Endeavor Society, which meets at the clubhouse every Sunday evening immediately following the song service.

New Superintendent of Colon Hospital.

Maj. Thomas L. Rhoads, Medical Corps, U. S. A., has been transferred to The Panama Canal Service, and, effective July 17, was appointed superintendent of Colon Hospital. He arrived on the Isthmus on the *Panama*, on Friday, July 17. Major Rhoads received the degree of M. D. at the Jefferson Medical College in Philadelphia, in 1893, and was ap-

pointed to the post of assistant surgeon in the United States Army on October 3, 1900. On October 3, 1905, he was promoted to the rank of captain and assigned to duty in the Medical Corps, and on January 1, 1909, he was promoted to the rank of major. He was last stationed at Philadelphia, as attending surgeon.

The Governor to Investigate McClintic-Marshall Company's Claims.

The Governor of The Panama Canal has been authorized and directed by Act of Congress to investigate the claims of the McClintic-Marshall Construction Company of Pittsburgh, Pa., for reimbursement to the amount of \$2,394,480, for extra cost in excess of the contract obligations in connection with the construction of the lock gates of the Canal. The text of the Act is, as follows:

AN ACT to authorize and direct Col. George W. Goethals, Governor of the Canal Zone, and formerly Chairman and Chief Engineer of the Isthmian Canal Commission, to investigate certain claims of the McClintic-Marshall Construction Company.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Col. George W. Goethals, Governor of the Canal Zone, and formerly Chairman and Chief Engineer of the Isthmian Canal Commission, is hereby authorized and directed to investigate the claims of the McClintic-Marshall Construction Company, a corporation of the State of Pennsylvania, having its principal office in the city of Pittsburgh, in said State, and to ascertain what amount, if any, is in justice, equity, and fairness due and owing to the said McClintic-Marshall Construction Company from the Isthmian Canal Commission for work and labor done and materials furnished in connection with the construction and erection of lock gates and appurtenances for The Panama Canal, and in connection with or incidental to the doing of the work and furnishing of the materials provided for in a certain contract between the Isthmian Canal Commission and said McClintic-Marshall Construction Company, dated June 21, 1910, taking into consideration the claim of the contractors that the work was done under requirements as to character and finish not fairly within the meaning of the specifications.

The said Col. George W. Goethals, Governor of the Canal Zone, is further authorized and empowered, either personally, or through such commission as he may appoint, to investigate such claims and the various items thereof in such manner as to him may seem best, and either personally, or through such commission, is hereby empowered to administer oaths and affirmations to witnesses, and to issue subpoenas and to compel the attendance of witnesses. He shall report in detail to the Congress of the United States his findings.

Approved June 24, 1914.

Lincoln House Baseball Club to Give Shirt Waist Dance.

The Lincoln House Baseball Club will give a shirt waist dance on Saturday evening, July 25, at the Lincoln House on Colon Beach. The following committees have been appointed:

Arrangements—R. T. Martin, chairman; C. H. Motsett, M. T. Guinett.

Refreshments—J. S. McCarthy, chairman; Roy Nelson, H. S. Huff.

Floor—J. W. Coffin, Jr., chairman; Malcolm Jones, B. E. McKeever.

The price of the tickets will be \$1.50, admitting gentleman and ladies.

PUBLIC SCHOOL YEAR.

Enrollment in June, 1914, Only Slightly Less Than in 1913—Record of Changes.

The public schools of the Canal Zone were closed for the summer vacation on Tuesday, June 30. At the close of the schools, there were 43 teachers employed in the teaching force of the white schools, and 23 employed in the colored schools. Twelve hundred and seventy pupils were enrolled in the white schools, and 1,492 in the colored schools, making a total of 2,762 in all schools. In June, 1913, the total enrollment was, 2,949, divided, as follows: Schools for white children, 1,369; schools for colored children, 1,580. The enrollment in June this year, therefore, was but 187 less than a year ago.

In the beginning of the year, the following changes were made in the supervisory force of the division of schools: Mr. Frank A. Gause was succeeded as superintendent by Mr. Frank P. Wagg, promoted from supervisor of upper grades and high school. On October 18, Mr. Wagg resigned, and was succeeded by Mr. A. R. Lang, promoted from high school principal. Miss Alice Alexander was succeeded as supervisor of primary grades by Miss Dora Neilson, promoted from line and substitute teacher.

Mr. John E. Talbot was appointed supervisor of upper grades and high school, and reported for duty from the United States on November 24, 1913. The positions of supervisor of upper grades and high school, and supervisor of primary grades, were abolished, effective June 30, when the services of Miss Neilson and Mr. Talbot were terminated. In addition to the regular teaching force in the schools for white children, there were employed two brake attendants and one noon hour attendant for children.

Twenty-three buildings have been in use for school purposes during the year, including a room in the Las Cascadas hotel building for first and second grade children, an apartment in nonhousekeeping quarters at Porto Bello, the native church at Marajal for native children, and two rooms over The Panama Canal hotel in Ancon for the sixth, seventh, and eighth grades of the Ancon school. At Corozal, an upper story was added to the old building for white children, the lower story divided into two rooms, and the new portion of the Gorgona schoolbuilding for white children connected, thus providing a 5-room schoolbuilding at that place. The 1-story schoolbuilding for colored children at Pedro Miguel was erected at Paraiso for the use of the colored children, and the school transferred from the old building in February. Owing to the overcrowded condition in the grades at Ancon, two rooms were fitted up in The Panama Canal hotel building for the upper grades of the school, and the pupils took up their work there at the opening of school after the Christmas holidays. A class for third year high school pupils living in Gatun and Cristobal was opened in Gatun on October 1.

Schools closed permanently, owing to the abandonment of the villages in the course of the completion of work on The Panama Canal, were the schools for white children at Gorgona and Toro Point, and the schools for colored children at Gorgona and Matachin. The school for white children at Bas Obispo, and the schools for colored children at Gorgona, Miraflores, Pedro Miguel, and Cruces, formerly operated, were not reopened during

the 1913-14 school year. Other movements of schools were, as follows: The Mandingo school was closed on December 19, 1913; the Marajal school for colored children was closed on February 6; the branch high school at Empire on February 20; the school for white children at Porto Bello on April 24, and the school for colored children at Cucaracha on May 29. The third year high school pupils attending at Gatun were transferred to Ancon on February 24.

Convenient consolidation of the grades, and the transferring of children by brake was made in the schools at Pedro Miguel, Las Cascadas, Empire, Culebra, Paraiso, and Corozal.

No school gardens were operated during the year, the garden site in connection with the school for colored children at Empire having been turned over to the Quartermaster's Department in October, 1913.

Medical inspection of the schools for white children was carried on as usual. The total number of pupils examined for conditions of throat, teeth, eyes, ears, and nose was 894. Of these children, 362 were found to be defective, and 39 were treated. These figures do not include the report of the Cristobal school, as the children there were examined at Colon Hospital, and not by the district physician, as was the case at all of the other stations.

In addition to this medical inspection, special sanitary rules and regulations were issued by the Chief Health Officer, whereby inspection of schoolbuildings by the district physician should be made at least once a month; this inspection covered the conditions of the buildings in regard to cleanliness of closet and lavatories, receptacles for holding drinking water, individual drinking cups, overcrowding, and the condition of playgrounds. Further health regulations required that pupils absent from school on account of sickness should be required to present a certificate from the district physician before they could be readmitted to their classes.

At the beginning of the year, fire drills were begun, and hand extinguishers were installed in all schoolbuildings. Teachers and janitors were instructed in their use by representatives of the Division of Fire Protection.

Amendments requiring four years of college training for high school teachers and limiting the female teaching force to unmarried women were made to the rules governing qualifications of teachers. The three married women now in the service will be allowed to continue. The present requirements for appointments to positions are, as follows:

"No applicant will be considered who is not an American citizen, who is more than 45 years of age, who has not completed a regular four years' high school or academy course, who has not had two years' training in a standard normal school or college, and two years' successful experience, certified to by at least three persons engaged in educational work and having personal knowledge of the applicant and her work as a teacher. High school teachers must have four years' college or university training, in place of the two years' college or normal training required for grade teachers."

All day sessions of seven 40-minute periods were begun in the high schools at Ancon and Empire on November 4, 1913. The Canal Zone high school, as organized at the close of the year, consisted of the main high school at Ancon, and the branch high school

for first and second year pupils at Gatun. The fourth annual commencement exercises of the high school were held in the National Theatre, Panama City, on Friday evening, June 26. There were nine graduates.

During the year a public schools athletic league was formed in the schools for white children, with the cooperation of the officials of the Young Men's Christian Association. The first annual meet of the league was held on Friday evening, June 12, in the Government clubhouses at Balboa, Corozal, Empire, Gatun, and Cristobal. The meet was won by the Corozal school. There were 198 participants, 99 boys and 99 girls. Each participant was given a certificate signed by the superintendent of clubhouses, the president and the secretary of the league, and the superintendent of schools. About 100 schoolchildren participated in the patriotic exercises held on the Fourth of July in Cristobal, the schools forming a chorus for the singing of national and patriotic songs.

Net Emigration from Isthmus in Eleven Months Over 15,000.

The report of the quarantine service for June shows a net emigration from the Isthmus during the month of 283 persons, as compared with a net emigration during May of 626 persons. The total net emigration from the Isthmus during the 11 months ending June 30, 1914, was 15,166 persons, the greater part of whom consisted of Canal laborers returning to their native countries.

The total number of steamship passengers embarking at the ports of Colon and Cristobal for foreign ports during June was 3,539, consisting of 1,677 cabin, and 1,862 steerage passengers. The number of persons landing from foreign ports was 3,281, consisting of 1,710 cabin, and 1,571 steerage passengers. The excess of persons who embarked over those who landed at these ports was 258. Europe contributed only 29 immigrants in the steerage class; 1,054 deck passengers arrived from the West India islands, 121 from Colombia, 70 from Cuba, 98 from Guatemala, 101 from Costa Rica, and 22 from the United States. The immigration from Central America has been greater than usual during the past few months, due to returning laborers, who have been working on the banana plantations and on railroad construction in Guatemala and Honduras. The number of persons arriving "In transit" at the Atlantic ports was 1,355, mostly tourists, as compared with 1,544 in May.

The number of persons arriving at the ports of Panama and Balboa from foreign ports during June was 597, consisting of 454 cabin, and 143 steerage passengers. The number of persons embarking for foreign ports was 622, consisting of 450 cabin, and 172 steerage passengers. The excess of those who embarked over those who landed was 25.

The number of vessels arriving at Colon and Cristobal during June was 91; at Balboa, 29.

Red Cross Lectures for Women.

The first aid lecture class for women, under the auspices of the Red Cross, began its course on Friday afternoon, July 17. The class has a registration of 15 members. Dr. Lauren S. Eckels, Captain, Medical Corps, U. S. A., stationed at Fort Grant, Naos Island, has been appointed to deliver the lectures. The class will hold its meetings in Ancon Hall every Friday afternoon at 3 o'clock.

BUILDING 600-FOOT TOWERS.

Erection of Steel at Darien Radio Station Has Been Begun.

The erection of steel in the first of the three 600-foot steel towers for the Darien radio station was begun on Thursday, July 9. The construction forces of the contractor for their erection have been engaged in preliminary work since the early part of June. They have assembled the principal parts of the plant, including a hoisting engine, cables, ropes, derricks, and timber for erection staging and falsework, have handled the first sections of steel to the site of tower No. 1, and have completed at this site a 150-foot timber tower from which to handle the steel to the 200-foot level.

This erection tower has been built in the center of the site of the steel tower, equidistant from the three footings, which are set in an equilateral triangle, 150 feet on the side. It has been surmounted by a stiff-legged derrick, with a 60-foot boom, which can revolve in a complete circle and be used, without further adjustment, for working over the three columns. The steel will be swung into place by derrick and be secured and supported by timber falsework. When it is completed to the 150-foot level it will be self-supporting by reason of struts and cross-bracing. The three legs batter inward, so that at the 150-foot level they will form the points of an equilateral triangle, 75 feet on the side. The faces of the concrete footings have been inclined from the horizontal sufficiently to be perpendicular to the columns with this batter. The base girders and anchor bolts have been set in the concrete on a line with the batter of the columns.

The derrick set on the 150-foot timber tower will handle the steel to the 200-foot level. When the steel has been carried to the 200-foot level, the timber tower and derrick will be dismantled and transferred to the site of tower No. 2. The contractor has not decided the method of operation above the 200-foot level, but it will probably be an adaptation of the gin pole; a pile or other heavy timber with a sheave on the upper end will be rigged to the highest section of the steel column, and the next section will be hoisted into place, lashed, and bolted. At the 200-foot level the columns will be 15-inch I-beams, and the pole can be fitted into the groove along the back of the beam.

The plan of the tower becomes constantly smaller as it approaches the top, where it will be only 10 feet on the side. The steel, accordingly, becomes lighter and lighter. Above the

400-foot level the material will be so light, relatively, that the men will work from the inside, and the gin pole will be abandoned for a small derrick; toward the top the steel will be handled into place by hand line.

About 800 tons of steel have been delivered on the Isthmus. This is approximately that for the first 200 feet of towers Nos. 1 and 2; none of the steel for tower No. 3 has been delivered. The towers are identical, except that No. 3 has one short leg. A total of slightly over 960 tons of steel will be used.

The contractor for the fabrication and erection is the Penn Bridge Company of Beaver Falls, Pa. This company sublet the fabrication of all the steelwork to the Toledo Bridge and Crane Company of Toledo, Ohio, and the erection to the Central American Construction Company, Limited, of Colon. After the latter corporation was placed in the hands of a receiver, in March, 1914, the Penn Bridge Company made a second contract for the erection with Mr. J. O. Childers of the Childers Construction Company of Columbus, Ohio. Mr. Childers was once a superintendent for the Penn Company, and was field superintendent for the McClintic-Marshall Construction Company in its work on the Canal, principally in the erection of the lock gates. He arrived on the Isthmus to take charge of the work at Darien about the middle of April. His present force consists of 12 white men and 13 West Indian negroes.

Forces of the Supply Department, numbering one gold and about 50 silver employees, are engaged in finishing the grading and filling about the concrete footings for the towers, and in the erection of a concrete operating building, one story in height and 26 by 50 feet in plan. They have completed a one-story concrete power house, quarters for the operators, and a cottage for the chief electrician. The Navy Department has a chief electrician on the grounds, supervising eight silver employees in handling miscellaneous materials and stores.

Officers of Union Church Sunday School.

At a meeting of the officers and teachers of the Cristobal Union Sunday school, held in the Union Church, Wednesday evening, July 8, the following officers were elected for the annual term ending July 1, 1915: Superintendent, W. H. Kromer; assistant superintendent, J. T. Veen; secretary, Arthur G. Gehrig; assistant secretaries, Ernest C. Cotton, Ida M. Glawson; treasurer, H. H. Alexander; librarian, Mr. Ellsmere; pianist, Mrs. Nora Hardeman; assistant pianist, Miss Sara Harrison; superintendent, be-

ginners' department, Elizabeth Sprau; assistant superintendent, beginners' department, Mrs. Helen Dovell; organist, beginners' department, Mrs. Ferguson; superintendent, primary department, Mrs. Josephine Harrison; assistant superintendent, primary department, Mrs. A. M. Fraser.

Act of Heroism by Zone Policeman.

Col. W. F. Blauvelt, commanding the Tenth Infantry at Camp Otis, has written the following communication to the Governor in regard to an act of heroism performed by First-class Policeman F. A. Crosscup on July 4:

"It gives me pleasure to bring to your notice the heroic action of First-class Policeman F. A. Crosscup of the Canal force. On July 4, Crosscup, with remarkable presence of mind, and in spite of imminent danger to himself, rescued Sergt. John M. Adams of this command from death under a moving train, by grasping the sergeant's head and shoulder and holding him wedged in between the wheels and station platform until the train was stopped. Sergeant Adams was severely wounded, and would undoubtedly have been killed, had it not been for the remarkable presence of mind of Crosscup, as the sergeant's head was lying directly on the rail when the policeman grasped him. It was brought to my attention by eye witnesses, and is given to enable you, if you so desire, to enter it upon Crosscup's record."

The Governor has written the following communication to Policeman Crosscup:

"Your action as indicated above is highly commendable, and I beg to inform you that Colonel Blauvelt's communication, and a copy of this letter will be placed on your personnel record."

Adjustment of Claims by Land Office.

A total of 2,237 property claims in the Canal Zone were adjusted by the Land Office of The Panama Canal during the period from January 1, 1913 to June 30, 1914, involving the payment to claimants of the sum of \$167,200.50. All of these claims were for improvements, with one exception. The only settlement where the transfer of land was involved was the property of Mr. B. B. Duncan at Las Cascadas, which was bought for \$20,000.

Retirement of Dump Cars from Service.

The recommendation of the surveying officer that as it becomes necessary to reduce the number of dump cars in service, the Oliver type of car should be retained and the Western type of car retired, has been approved by the Governor. This plan is to be followed, except when repairs to an Oliver would be excessive.

CLASSIFIED EXPENDITURES—ISTHMIAN CANAL COMMISSION.

A statement of classified expenditures of the Isthmian Canal Commission to March 31, 1914, follows:

PERIODS.	Department of Civil Administration.	Department of Law.	Department of Sanitation.	Department of Construction and Engineering	General Items.	Fortifications.	Total.
Total to June 30, 1909	3,427,090.29		9,673,539.28	69,622,561.42	78,022,606.10		160,745,797.09
Total—Fiscal year, 1910	709,351.37		1,803,040.95	26,300,167.05	2,863,088.83		31,675,648.20
Total—Fiscal year, 1911	755,079.44		1,717,792.62	27,477,776.19	3,097,959.72		33,048,607.97
Total—Fiscal year, 1912	820,398.57	24,729.16	1,620,391.12	28,897,738.10	2,819,926.53	1,212,881.66	35,396,065.14

Whenever advisable, Westerns may be repaired, but only when necessary repair parts are either obtainable from stock on the Isthmus, or from cars which have been scrapped. The elimination and reduction of one of the types of the 12-yard Olivers has also been approved, and the amount to be expended in the repair of any one car is left to the discretion of the superintendent of the Mechanical Division. A census of the two types of cars is being taken.

Meeting of the Woman's Foreign Missionary Society.

The Woman's Foreign Missionary Society of the Methodist Episcopal Church met in the church parlors on Saturday afternoon, July 11, when the speaker for the afternoon was the Rev. Alfred DeRoos, a missionary who is working in the city of Colon. The program, which consisted of the reading of the fourth chapter in the text book, "The King's Business," was conducted by the president of the society, Mrs. Harry Compton. Mrs. J. Leon Webster, organizer of the society, who has returned to the Isthmus after an absence of more than two years, was present, and took an active part in the meeting.

On Sunday, July 12, the special preacher for the day at the Methodist church on the seaway, Panama, was the Rev. Mr. Baker, a Methodist missionary, who is located in Cuba in connection with the mission there. Mr. Baker preached to the American congregation at the morning service in English, and to the Spanish section of the church, in Spanish, in the evening.

Red Cross Finances.

The financial statement of the Canal Zone Chapter, American National Red Cross, for the month of June is, as follows:

RECEIPTS.	
June 1, 1914. Balance on hand	\$3,984.94
DISBURSEMENTS	
June 3 Relief of sick American at Gatun.....	\$2.20
June 3 Relief of destitute Jamaican at Camp Otis.....	15.00
June 3 Relief of abandoned orphans at Ancon Hospital.....	10.00
June 3 Donation for the benefit of the sufferers at the powder magazine explosion, Panama.....	200.00
June 10 Postage, treasurer	2.00
June 23 Relief of American convict.....	100.00
Total disbursements.....	\$329.20
June 30 Balance on hand	\$3,655.74
T. L. CLEAR, Treasurer.	
Approved: EDW. SCHILDHAUER, Chairman.	

Clubhouse Privileges for Tenth Infantrymen.

Members of the Tenth Infantry stationed at Gatun and Pedro Miguel will hereafter be granted the privileges of the Y. M. C. A. clubhouses at those points under the following arrangement:

Monthly tickets will be sold them for 50 cents each. Free use of the pool and billiard tables, and bowling alleys will be allowed at certain hours when Canal employes are at work. At other hours, regular prices will be charged for pool, billiards, and bowling. The soldiers may pay for membership tickets, refreshments, pool, billiard, and bowling games, cigars and other, merchandise on sale, and barber shop work, in post exchange coupons, if they desire, these coupons to be redeemed in cash at the post exchange at Camp Otis.

OFFICIAL CIRCULARS.

Papers and Metal Checks to be Surrendered, when Leaving Service or Going on Leave.

THE PANAMA CANAL,
THE PANAMA RAILROAD COMPANY,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 20, 1914.

CIRCULAR No. 675-1 (Superseding Circular No. 675):
1. All employes of The Panama Canal prior to receiving from the Auditor of The Panama Canal time vouchers issued either at termination of service, or when going on leave, must deliver to the Auditor, or to the branch of his office at Cristobal or Ancon, the following:

(a) 24-trip tickets with unused coupons, only on termination of service.

(b) Release from quarters. In case an employe does not occupy Panama Canal quarters, the release must so state.

(c) Property releases. Circular No. 656-2 provides: "10. Property releases. All gold employes leaving the service or entering on leave will be required to secure releases from property and quarters, which must be presented to the Auditor, Panama Canal, before final payment.

"11. Property entrusted to silver employes. Responsible officers will be required to see that property for which they are responsible and which may be in the possession of silver employes, is satisfactorily accounted for before such employes leave the service.

"12. Release of accountable officers. Final payments to accountable officers will be withheld in the Auditor's office until such time as an audit of property accounts is made, or a transfer effected to some other accountable officer, after which a release will be issued by the Auditor.

"13. Release of responsible officers. Releases to responsible officers will be issued by accountable officers, and releases to all other gold employes will be issued by responsible officers."

2. The Paymaster will take up the new Panama Canal metal checks from employes upon payment of time vouchers issued on account of termination of service. Such metal checks will be forwarded to the Auditor the first of each month. Should an employe fail to surrender his metal check, 50 cents shall be deducted.

3. Employes leaving the service will be furnished single trip passes for themselves and dependent members of their families from the place of employment to port of embarkation by the department or division in which they are employed.

GEO. W. GOETHALS,
Governor, The Panama Canal,
President, The Panama Railroad Company.

Aids to Navigation and Notice to Mariners.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., April 1, 1914.

CIRCULAR No. 643:

1. The Superintendent of Transportation is charged with the supervision and upkeep of the aids to navigation, and all recommendations and reports in relation thereto should be made to him. In general, and particularly where immediate action is considered necessary, information concerning aids to navigation, or other matters affecting the navigation of Canal Zone waters, should be communicated to the captain of the port at Cristobal or Balboa.

2. The position, order, or class, and characteristic of all aids to navigation in Canal Zone waters shall be fixed by the Governor of The Panama Canal, and no changes in them shall be made without his authority, nor shall the number of aids be increased or decreased without his permission.

3. Should it become necessary to mark wrecks or newly discovered dangers or obstructions to navigation, buoys or other objects may be placed at once, but the fact must be immediately reported to the Governor, together with the necessary data showing their position and characteristics; the Governor's permission must also be obtained to remove such aids.

4. When buoys or other aids are placed or established in connection with harbor or channel improvement work, the official causing them to be so placed shall see that they do not conflict in their positions, in their characteristics, or otherwise, with the regularly established aids to navigation in their vicinity, and shall, when necessary and practicable, confer with the Superintendent of Transportation on this subject.

5. In all cases where there is a possibility of confusion arising, the Superintendent of Transportation must be informed at once.

6. The Governor shall cause notices to mariners to be issued in all cases where there is any material change in the aids to navigation, and whenever practicable, such notices shall be issued in ample time in advance to give all those concerned sufficient notification.

7. In all cases where changes are made or contemplated, all divisions concerned shall be immediately notified.

8. Notices to mariners and other information of use to shipping shall be sent to the several divisions concerned, to the captains of the ports, the Panama railroad, the local steamship agencies, and be posted in conspicuous places, where they will catch the attention of those most interested.

9. The necessary data concerning all changes in aids to navigation, hydrography, sailing directions, etc., shall be sent to the Hydrographic Office in Washington as far in advance as practicable, so that it may be published in its regular notices to mariners.

10. From sunset to sunrise, such lights as may be required by the Governor for security of navigation, shall be maintained on bridges or pontoons, which may obstruct navigable waters.

GEO. W. GOETHALS,
Governor.

Report of Absences.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 13, 1914.

CIRCULAR No. 602-9 (Superseding Circular 602-1):

1. Effective August 1, 1914, the use of excuse card (Form P. C. 464) and report of absence (Form P. C. 465) will be discontinued, and all absences from work of whatever nature must be covered by the new report of absence (Form P. C. 484.)

2. The use of Form D. S. 5, certificate of disability, is also discontinued, and physicians will report all absences on account of illness or injury on Form P. C. 484.

3. The form may be used to cover time absent with prior permission for periods of not less than one-half day or more than five days, either with or without pay, but for periods of more than five days approval must be received from the Executive Secretary.

4. Instructions governing the use of the form are printed on the back of the form, and as the leave records of employes are prepared from this form heads of departments and divisions are directed to enforce strict compliance with these instructions. Form P. C. 466, report of return to duty, in use by the chief timekeeper, is superseded by the new form.

5. A supply of the form is sent to the head of each department and division herewith, and additional supply must be requisitioned from Mount Hope.

GEO. W. GOETHALS,
Governor.

Committee on Rates to Outsiders for Rental of Equipment, Etc.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., July 14, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

In order to revise existing circulars prescribing rates to be charged "Individuals and companies," and other branches of the United States Government, for rental and use of equipment, material, water, electric current, and for all other services, I have appointed a committee consisting of the Auditor, the Superintendent of the Mechanical Division, and the Costkeeping Accountant, to confer separately with the head of each department and division interested, who would be *ex-officio*, a member of this committee so far as the rates of his particular department or division are concerned, for the purpose of submitting recommendation thereon.

Heads of departments and divisions will, therefore, prepare and forward to the Auditor of the Panama Canal the rates recommended by them so far as their respective departments and divisions are concerned. The Auditor of The Panama Canal will fix a time and place for meetings to discuss the rates after same have been received by him.

GEO. W. GOETHALS,
Governor.

New Accounts.

CULEBRA, C. Z., July 6, 1914

H. A. A. SMITH,
AUDITOR, THE PANAMA CANAL,
EMPIRE, C. Z.,

The following general accounts are authorized:
WORK IN PROGRESS.

In this account will be charged all labor, material, and other expenses in connection with work done for outsiders, exclusive of the Panama railroad, and the Government of the Canal Zone, which is not completed at the close of the month. This account will be credited with the total amount so charged upon completion of the work and rendition of bill.

WORK DONE FOR PANAMA RAILROAD.

This account will be charged with the cost of labor, material, and services rendered for account of the Panama railroad. No prorata will be made to this account for general overhead expenses.

BILLS RENDERED AGAINST THE PANAMA RAILROAD.

This account will be credited with the amount of all

bills rendered against the Panama railroad. These bills will not be taken up under "Revenues."

Respectfully,

GEO. W. GOETHALS,
Governor.

Traveling Expenses.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., May 19, 1914.
CIRCULAR No. 60, (Superseding Isthmian Canal Commission circular No. 48):*

1. The following regulations concerning traveling expenses of officers and employees of The Panama Canal are published for the information and guidance of all concerned. They do not refer to travel upon the Isthmus of Panama by officers and employees stationed upon the Isthmus, unless such travel is at the beginning or at the termination of a journey extending beyond the Isthmus.

2. Before any expense is incurred in traveling upon business of The Panama Canal, an order will be issued by competent authority. Travel orders may be either oral or written and shall state, when written, as specifically as circumstances will permit, the travel to be performed. When an officer or employee is at a distance from the official authorized to order travel and the necessity for immediate travel will not permit of the delay necessary to procure authority, or when other conditions render it impracticable to obtain authority without serious injury to the public interests, he may proceed without such order, reporting at once in writing to the head of his department the necessity for the travel without orders. When practicable, all transportation and Pullman accommodations will be procured on official transportation requests.

3. All travel must be by the shortest practicable routes, unless otherwise directed by the travel order, and must be without unnecessary delays. Proper and legitimate travel expenses include such as are usual and essential to the comfort of travelers, such as an employee would incur if paying his own expenses, and may embrace any of the following items:

(a) The usual one way, or, where time limits are found to be ample, round trip fares on railroads, steamships, or other public conveyances, and hire of special transportation where there are no regular means of conveyance. The use of commutation tickets or the acceptance of rebates in any form on fares is prohibited. Mileage books may be used when authorized by the Governor. Charges for meals will not be allowed if the transportation charge includes meals. "Excess baggage" charges must be explained, and, to be allowed, must be for official papers or public property carried with the officer or employee. Travel on limited trains requiring excess fares will not be allowed, except when absolutely necessary, and the account shall contain a certificate setting forth this necessity.

(b) Street car, omnibus, or transfer coach fare between stations, docks, and hotels, and, when there are no such conveyances available, moderate or necessary hack or cab hire, not exceeding the usual and legal rates, and transfer of baggage. Street car fare while on official business during the time spent in a city will be allowed, but the necessity for employing a more expensive means of conveyance must be explained.

(c) Sleeping car fares for one double berth, parlor or seat, and fare for usual stateroom accommodations on vessels; also, fees to porters on sleeping and parlor cars, not exceeding 25 cents in one day, and reasonable fees to porters for handling baggage at stations, etc., when necessary. Where money is expended for parlor car seat or berth, statement should be made as to which accommodation was secured. When Pullman accommodations are procured, report should state whether upper berth, lower berth, or parlor car seat was furnished, and Pullman receipt must be filed with expense report.

(d) Subsistence—Charges for meals and lodging, whether meals en route or at hotels and restaurants, reasonable fees to waiters, not exceeding 40 cents a day; reasonable charge for laundry, if away from home station more than three days; reasonable charge for bath; and, if travel by ocean steamer, reasonable fees to stewards, not exceeding an average of 75 cents for each 24 hours or fraction thereof. The total of the foregoing items in this paragraph shall not exceed in the aggregate \$5 for any 24 hours.

(e) Receipted bills for hotel expenses, so itemized as to show the number of days, rate per day, and dates of entertainment, must be furnished; also, receipts for stenographic and typewriting service, and for any expense exceeding \$1, except that receipts are not required, for transportation by railroad or vessel, for single meals, or for fees to porters, waiters, and stewards. The cost of each meal should be stated.

(f) All telegrams sent to the Washington office of The Panama Canal should be marked "Collect, Government rates," as none should be prepaid. If the telegram is not to the Washington office, but nevertheless

on official business, the toll should be prepaid at the rates fixed in the schedule of the Postmaster General. Whenever a telegram is paid for and charged in voucher a pen or carbon copy of same must be attached to the voucher, and the receiving agent of the telegraph company shall indorse receipt of the toll on such copy. Where an official telegram is received "Collect" by an officer or duly authorized employee of The Panama Canal, receipt for payment should be endorsed on such telegram by the agent of the telegraph company, receipted telegram to be used as subvoucher in expense account. Expenses for telegrams relating to leaves of absence, payment of salary, and expense vouchers, or any other matter of a personal nature, will not be allowed, and such telegrams must not be sent "Collect" at the expense of The Panama Canal. In preparing telegrams, care should be observed that all unnecessary words, initials, and figures are omitted.

Employees should provide themselves with means of identification to satisfy the telegraph companies that they are officially connected with The Panama Canal, to enable them to get messages accepted for transmission on the terms herein fixed. Official identification cards will be issued to employees whose duties require frequent transmission of telegrams.

4. When reimbursement for traveling expenses is to be made on the Isthmus, accounts will be rendered in duplicate on forms of vouchers approved by the Governor. Such vouchers shall be certified to by the officer or employee who performs the travel and, with the original order for travel, if written, and all necessary explanatory statements in writing, shall be submitted to the Auditor on the Isthmus.

When reimbursement for traveling expenses is to be made in Washington, reports of the official travel performed and the expenses in connection therewith will be submitted to the official directing the travel, who will endorse thereon his verification and such other notations as may be necessary, and forward same to the Assistant Auditor at Washington.

The voucher or report will be so stated as to show clearly and in proper sequence the movements of the traveler, and detailed itemization of the expenses incurred day by day. Hotel expenses, when extended over several days, should be stated in the voucher or report as of the date on which paid.

5. No officer or employee traveling under orders shall pay for transportation on a railroad, steamer, or other conveyance operated by the Panama Railroad Company, but shall use an order for transportation furnished by the Governor or by his direction, at Washington, or by the duly authorized official on the Isthmus. An order for transportation shall also be issued, when practicable, for travel by any steamship line between ports on the Isthmus and ports in the United States or other countries.

6. These regulations shall not apply in any instance where by law a *per diem* allowance for any items of expense is fixed for any officer or employee.

These regulations shall be effective from and after July 1, 1914.

GEO. W. GOETHALS,
Governor.

*First issue of new series of circulars by the Washington office of The Panama Canal; the last circular issued by the Washington office of the Isthmian Canal Commission was No. 52.

Engine Failures.

THE PANAMA CANAL,
THE PANAMA RAILROAD COMPANY,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 10, 1914.

CIRCULAR No. 677:

DELAYS CONSTITUTING ENGINE FAILURES.

1. All delays waiting for an engine at an initial terminal, except in cases where an engine must be turned and does not arrive in time to be dispatched and cared for before leaving time.

2. All delays on account of engine breaking down, running hot, not steaming well or having to reduce tonnage on account of defective engine, making delay at a terminal, a meeting point, or a junction connection, with delay to the traffic.

DELAYS NOT TO BE REPORTED AS ENGINE FAILURES.

3. Where engines lose time and afterward regain it without delay to connections or other traffic.

4. Where a passenger or scheduled freight train is delayed from other causes, and an engine (having a defect) makes up more time than it loses on its own account.

5. On passenger trains when they are less than five minutes late at terminals or junction points.

6. On scheduled freight trains when they are less than 20 minutes late at terminals or junction points.

7. When an engine is given excess or estimated tonnage and stalls on a hill, providing the engine is working and steaming well.

8. On extra dead freight trains if the run is made in

less hours than the miles divided by fourteen.

9. Where delays are on account of engines steaming poorly, or flues leaking, or where the engine has been delayed on side tracks other than by defects of engine, or on the road an unreasonable length of time, say, nine minutes per mile for the actual distance run.

10. Where delay was reasonable for cleaning fires and ash pans on the road.

11. Where delays are on engines that are coming from outside points to the shops for repairs.

12. Where an engine is held in the roundhouse for needed repairs, and called for by the operating department, they being informed that the engine will not be ready until a stated time.

13. Where delays are due to broken draft rigging on engines and tenders caused by air being set on train, or on account of burst air hose or train breaking in two.

14. Where the weather conditions are such that it is impossible to make the time, even assuming that the engine is working and steaming well.

15. When an engine gets out of fuel and water, caused by being held between coal and water stations an unreasonable length of time.

16. Where work is done on engines while waiting for other trains to meet or pass, or while the station work is being done.

17. Where delays are due to engines striking obstructions on or beside the track.

GEO. W. GOETHALS,
Governor, The Panama Canal.
President, The Panama Railroad Company.

Correct Names and Check Numbers.

THE PANAMA CANAL,
OFFICE OF THE GOVERNOR,
CULEBRA, C. Z., July 10, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

Considerable difficulty is experienced from time to time in connection with the employment of aliens on the silver roll due to the fact that care has not been exercised by some officials with respect to securing the correct name and check number of the employee. Frequent trouble is experienced in connection with settling estates, admitting patients to hospitals, and in other ways due to this negligence.

It is directed that in all cases where it is necessary to give the name of a silver roll employee on any official document, no matter how unimportant it may seem to the official, the spelling of the name, and the writing of the check number be absolutely accurate. Where the name of the division, subdivision, or gang is required on a blank of any kind they should be filled in without fail. There are many West Indian and Spanish employees who have similar names, and confusion easily results, unless great care is taken to absolutely identify the employee by getting his correct name and check number.

GEO. W. GOETHALS,
Governor.

Rules and Regulations for Inspection of Boilers. Except those on Floating Equipment.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., June 20, 1914.

CIRCULAR No. 674:

GENERAL.

1. The superintendent of the Mechanical Division is charged with the supervision of inspecting, testing, and prescribing the proper working steam pressure on all steam boilers operating in the Canal Zone and in the cities of Panama and Colon for The Panama Canal and the Panama Railroad Company, except boilers on floating equipment, which will be inspected by the Board of Local Inspectors.

2. The safe working pressure for boilers shall be determined and fixed by the head of the Mechanical Division from calculations and detailed examination, and after consideration of the general design, workmanship, and condition of the boiler, giving full weight to the service required of it and the conditions under which it is to operate. In determining the safe working pressure, a factor of safety not lower than 4.5 shall be used, except in special cases, when the service demands a higher pressure and a change of boilers is impracticable, in which case a minimum factor of safety of 4.0 may be permitted temporarily. Whenever the allowed working pressures are considered by operating divisions as being so low as to impair the efficiency of the plant, the division head may request reexamination and recalculation.

3. All steam boilers and their appurtenances shall be thoroughly tested and inspected, internally and externally, at least once every 12 months, and, in addition, there shall be partial inspections as provided for in Sections 11 and 111 below. Additional inspections will be made upon written request of the head of the department or division to which the boiler belongs.

4. The date of inspection will be fixed by the head of the department or division operating the boiler

(or his representative), after consultation with the superintendent of the Mechanical Division, or his representative. It shall be the duty of the superintendent of the Mechanical Division to inform the operating officials of the date an inspection is due sufficiently in advance of the date to allow preparations to be made. Inspections shall be distributed as uniformly as possible throughout the year, so as to permit a minimum number of inspectors.

5. Heads of departments or divisions shall furnish the superintendent of the Mechanical Division with an annual statement covering all boilers under their jurisdiction. This statement to show: (a) Boiler number; (b) service, or equipment on which installed; and (c) location. In addition to the annual statement, notifications shall be given the superintendent of the Mechanical Division whenever a new boiler is installed, or whenever a boiler is transferred from one division or department to another, or whenever the location of a boiler, except those on rolling stock, is changed within the division or department.

6. After a boiler inspector has inspected any boiler, he will immediately make a report in writing to the superintendent of the Mechanical Division on the prescribed form, giving a statement as to the condition of the same. If the condition is such as to require immediate attention, he shall so inform the official in charge of the boiler or plant, describing the work immediately necessary to put the boiler in safe working condition. Copies of all inspection reports relating to locomotive boilers will be sent to the traveling engineer.

7. After the annual inspection and hydrostatic test have been made, the head of department or division shall be furnished with a certificate of inspection, signed by the boiler inspector making the inspection, and approved by the superintendent of the Mechanical Division. This certificate shall be kept posted in a conspicuous place near the boiler, and shall not be removed therefrom, except when the boiler or its appurtenances becomes defective, or a new certificate is issued. It shall then be removed by a member of the boiler inspection force. The inspection certificate shall be on the prescribed form.

BOILER INSPECTION RULES.

SECTION I—HYDROSTATIC PRESSURE TEST.

8. Every boiler rated to carry more than 50 pounds pressure per square inch, before being put in service and at least once during each twelve (12) months thereafter, shall be subjected to a hydrostatic pressure equal to one and one-fourth (1½) times the maximum working pressure. Boilers rated to carry 50 pounds pressure per square inch, or less, and all types of "Old French" boilers, shall be tested before being put in use, and at least once during each twelve (12) months thereafter, to one and one-half (1½) times their maximum working pressure.

9. Boilers shall be prepared for inspection by cooling down (blanking off connections to adjacent boilers, if necessary), removing all soot and ashes from tubes, heads, shell, furnace, and combustion chamber, removing grate bars from internally fired boilers, and removing the steam gage for testing. Boiler inspectors are not expected to perform any work in connection with replacing grates, handhole, and manhole plates, or other work of similar nature necessary to put the boiler in condition for service. All work necessary to permit inspection will be performed by the force of the division to which it belongs. This force shall also replace all parts taken down for such inspection.

10. The boiler inspector, after applying hydrostatic pressure test, shall thoroughly examine every accessible part of the boiler, both internal and external, and apply a hammer test where it is possible.

11. If a boiler has not been properly cooled down, and otherwise prepared for inspection, the boiler inspector may decline to inspect it, but in this case he must at once report his action and his reasons therefor to the superintendent of the Mechanical Division. He must also state verbally to the employee in charge of the boiler his reasons for refusing to make the inspection.

12. When boilers are being tested in the shops by hydrostatic pressure, the foreman of the shop making the repairs, or a qualified representative, shall personally attend and assist the inspector in his examination.

13. After a boiler has been repaired, it shall be given the hydrostatic test, and shall then be fired up, and the steam pressure raised to not less than the allowed working pressure. While under steam it shall be again carefully inspected for leaks or evidences of straining.

SECTION II—INSPECTION OF INTERIOR OF BOILERS.

14. Every boiler, except boilers on locomotives, shall be given an internal inspection at least once every twelve (12) months about six (6) months after the annual hydrostatic test, or as much oftener as the superintendent of the Mechanical Division considers necessary, and whenever a sufficient number of flues are removed to allow inspection.

15. Whenever flues are removed from a boiler, the foreman in charge of work shall notify the boiler inspection service, so that an internal inspection may be

made. After the flues have been removed, the boiler shall be scaled and cleaned thoroughly, where accessible, before notifying the inspector, so that inspection may not be delayed.

16. When making internal inspection, the entire interior of the boiler, where accessible, must be examined for cracks, pitting, and grooving. The edges of plates, laps, seams, and joints, where cracks and defects are likely to develop, and any defects which an external examination may have indicated to exist, must be given an especially careful examination. It must be seen that braces and stays are taut, that pins are properly secured in place, and that each brace, stay, or pin is in position to support its proportion of stress.

17. Any boiler developing cracks in the shell or sheets shall be taken out of service at once, and thoroughly repaired before being reported as in satisfactory condition.

18. Boilers having lap joint longitudinal seams shall be examined with special care to detect grooving and cracks at the edges of seams, and any sheets showing cracks in longitudinal seams shall be condemned for service and not repaired.

SECTION III—INSPECTION OF EXTERIOR OF BOILERS WHILE UNDER STEAM.

19. Every boiler shall be given an external inspection at least once every six (6) months, about three (3) months before and after the annual hydrostatic test, and while the boiler is in service under steam.

20. The boiler inspector shall test the steam gage, and if found defective, shall order it repaired or condemned.

21. The boiler inspector will see that the water glass, gage cocks, water column connections, feed water appliances, and bottom blow-off are free and clear, and in good working order; also, that the safety valve lifts freely from its seat at a pressure not above the maximum allowable working pressure. If the boiler is found to be working in excess of its maximum allowable working pressure, the inspector shall set the safety valve at the proper pressure, and report the circumstances to the superintendent of the Mechanical Division.

22. Fire doors, tube doors, and doors in settings shall be opened to view as far as possible the fire surface, settings, tube ends, blow-off pipe, and fusible plug.

23. In general, the boiler inspector shall fully note the condition of the boiler and its appurtenances, and recommend changes and repairs when necessary.

24. No boiler shall be allowed to remain in service which has one (1) or more fire tubes plugged at both ends of the tube, unless the plugs are securely tied together by means of a rod not less than five-eighths (⅝) inch in diameter, and these tubes must be renewed as soon as possible. The use of plugs in flues of locomotive type boilers should be avoided whenever practicable. In any case, not more than two plugs will be allowed in any one sheet for more than 12 hours if possible to avoid it. If the requirements of the service and the condition of the boiler require the use of more than two plugs for more than 12 consecutive hours, a report on the condition of the boiler and the necessity for continuing it in service must be made promptly by those in charge of it to the head of the department or division having jurisdiction over it, who shall send a copy of this report, with such comment as he may deem desirable, to the superintendent of the Mechanical Division.

SECTION IV—STAY BOLT TEST.

25. All stay bolts in boilers shall be tested at least once every six (6) months, except those in locomotive boilers, which shall be tested once every forty-five (45) days. Stay bolts must also be tested immediately after every hydrostatic test, regardless of the length of time since they were previously tested.

26. The inspector must tap each bolt from the fire-box side, and judge from the sound, or the vibration of the sheet, if any are broken. Unless the boiler can be emptied there must be not less than fifty (50) pounds pressure, and preferably more, which will produce sufficient stress on the stay bolts to cause the separation of the parts of the broken ones. If it is preferable, however to make the test when the boiler is empty.

27. All stay bolts having "Tell-tale" holes must, when accessible, be thoroughly cleaned out by drill prior to hydrostatic test, and whenever boiler is in the shop for general repairs.

28. The boiler inspector shall make an accurate report of the location of each imperfect stay bolt, and forward same to the superintendent of the Mechanical Division, attached to his boiler inspection report. The head of the department or division under whom boiler is operating will be notified from the office of the Mechanical Division of all cases where a sufficient number of stay bolts are broken to render the boiler unsafe for service. Immediate action must then be taken to make necessary repairs.

SECTION V—STEAM GAGES.

29. Each boiler shall have at least one pressure gage connected up to the steam space of boiler by a syphon or equivalent device, sufficiently large to fill the gage with water, and in such manner that the steam gage cannot be shut off from the boiler, except by a

cock with a T or lever handle, which shall be placed on the pipe near steam gage. All connections between steam gages and boilers must be of brass or other metal that does not rust, and this clause shall be inserted in specifications for all boilers purchased in future. When boilers go through the shops for general overhauling, the steam gage connections shall be changed to brass or other nonrustable metal if not already so made.

30. The dial of the steam gage shall be graduated to not less than one and one-half (1½) and preferably to two (2) times the maximum working pressure of the boiler.

31. Steam gages shall be calibrated by a boiler inspector at least once every three (3) months. All steam gages working on batteries of boilers shall be calibrated at the same time.

32. Each boiler shall be provided with a one-fourth (¼) inch pipe connection for attaching inspector's test gage while boiler is in service, so that the accuracy of boiler steam gage can be ascertained.

SECTION VI—SAFETY VALVES.

33. Each boiler of less than fifty (50) horsepower shall have one or more safety valves. On all boilers hereafter installed, and wherever practicable on boilers now in service, each boiler of fifty (50) horsepower and over shall have two or more safety valves.

34. The minimum size of a direct, spring loaded safety valve shall be determined by calculations made in the Mechanical Division and shall be governed by the pressure allowed, and by the grate area of the boiler, subject to the following conditions:

Condition 1. A single boiler, or two or more boilers connected to a common steam main, and allowed the same pressure; the minimum size of safety valve for each boiler shall be governed by the pressure allowed and the grate area of the boiler.

Condition 2. When two or more boilers, which are allowed different pressures, are connected to a common steam main, the minimum size of each safety valve shall be governed by the pressure allowed and by the grate area of boiler, and all safety valves shall be set at a pressure not exceeding the lowest pressure allowed. The aggregate valve area shall not be less than that required for the aggregate grate area, based on the lowest pressure allowed.

35. Each safety valve shall have a full-sized direct connection to the boiler, and when an escape pipe is used, it shall be full-sized and fitted with an open drain, to prevent water lodging in the upper part of safety valve or escape pipe.

36. When a boiler is fitted with two safety valves on one connection, this connection to the boiler shall have a cross-sectional area equal to or greater than the combined area of the two safety valves. No valve of any description shall be placed between the safety valve and the boiler, nor on the escape pipe between the safety valve and the atmosphere. When an elbow is placed on the safety valve escape pipe, it shall be located close to the safety valve outlet, and the escape pipe shall be securely anchored and supported.

37. Safety valves having either the seat or disc of cast iron shall not be used.

38. Safety valves hereafter installed on boilers shall not exceed five (5) inches in diameter, and shall be of the direct, spring loaded type.

39. Safety valves shall not be removed for any purpose whatever, except for repairs, and then only by properly authorized persons. Whenever a safety valve is changed or set, it shall be immediately reported to the Mechanical Division and a check shall be made of the setting by a boiler inspector.

40. Tampering with, or changing the setting of safety valves, without proper authority, shall be considered sufficient cause for dismissal from the service.

41. Safety valves shall be set by the gage attached to the boiler and shall lift at a pressure not exceeding the maximum allowable working pressure, as fixed by the superintendent of the Mechanical Division. The gage, in all cases, shall be tested before the safety valves are set or any change made in setting.

42. Safety valves shall be checked and reset, if necessary, under steam at least once every three months.

SECTION VII—FUSIBLE PLUGS.

43. Every boiler shall be equipped with one or more fusible plugs of standard design, and no other. All fusible plugs shall be filled with pure Banca tin, and located, as follows:

44. *In horizontal return tubular boilers*—In rear head not less than two (2) inches above the upper row of tubes, measurements to be taken between a line at the upper surface of tubes and the center of plug. The plug must project through the sheet not less than one (1) inch.

45. *In locomotive type or Star water tube boilers*—In the highest part of the crown sheet, and projecting through the sheet not less than one (1) inch.

46. *In vertical fire tube boilers*—In an outside tube, not less than one-third (⅓) the length of the tube above the lower tube sheet, and opposite a handhole; or in the lower tube sheet, and projecting through the sheet not less than one (1) inch. Location in tube is preferred.

47. *In vertical, submerged fire tube boilers*—In the upper tube sheet.

48. *In water tube boilers, horizontal drums (Babcock and*

Wilcox type—In the upper drum, not less than six (6) inches above the bottom of drum, over the first pass of the products of combustion, and projecting through the sheet not less than one (1) inch.

49. *In Sterling boilers, standard type*—In the front side of the middle drum, not less than four (4) inches above the bottom of the drum, and projecting through the sheet not less than one (1) inch.

50. *In Sterling boilers, superheater type*—In the front drum, not less than six (6) inches above the bottom of the drum exposed to the products of combustion, and projecting through the sheet not less than one (1) inch.

51. *In water tube boilers, Heine type*—In the front course of the drum, not less than six (6) inches above the bottom of the drum, and projecting through the sheet not less than one (1) inch.

52. *In Scotch marine type boilers*—In combustion chamber top, and projecting through the sheet not less than one (1) inch.

53. *In dry back Scotch boilers*—In rear head, not less than two (2) inches above the upper row of tubes, and projecting through the sheet not less than one (1) inch.

54. *In old French vertical (Galloway and drop tube type) boilers*—In top of firebox, and projecting through the sheet not less than one (1) inch.

55. For other types and new design, fusible plug shall be placed at the lowest water level in the direct path of the products of combustion, as near the primary combustion chamber as possible.

56. Fusible plugs shall be examined every time the boiler is washed out, and if defective shall be renewed.

SECTION VIII—WATER GAGE COCKS AND GLASS.

57. Every boiler shall be equipped with three or more gage cocks, located within the range of the visible length of water glass.

58. Every boiler shall be equipped with at least one water gage glass, the lowest visible part of which shall be above the fusible plug and lowest safe water line. All water glasses shall be supplied with two valves or shut-off cocks, one at the upper, and one at the lower connection to the boiler, and also a drain cock so constructed and located that they can be easily opened up and cleaned by hand.

SECTION IX—WATER COLUMN.

59. The minimum size of pipes connecting the water column of a boiler shall be one (1) inch.

60. The water connection to the water column should be of brass or other metal that does not rust, and this clause shall be inserted in specifications for all boilers purchased in future. In addition, boilers going through the shops for general overhauling shall have water column connections made of brass or other non-rustible metal to conform to the above, if not already so fitted.

61. The steam connections to the water column of a horizontal return tubular boiler shall be taken from the top of the shell, or the upper part of the head. The water connections shall be taken from a point not less than six (6) inches below the center line of shell.

62. No connections other than those to the gage glass shall be placed on pipes connecting water column to boiler.

63. When shut-off valves are placed on the pipes connecting the water column to boiler, these valves shall be of the straight-way type, and shall be locked or sealed in the open position.

SECTION X—BOTTOM BLOW-OFF AND FITTINGS.

64. Each boiler shall have a bottom blow-off pipe fitted with a valve or cock in direct connection with the lowest water space practicable. The minimum size of pipe and fittings shall be one (1) inch, and the maximum size shall be two and one-half (2½) inches. Globe valves should not be used for blow-off, and if any boiler in service is found to be so fitted another type of valve shall be fitted as soon as practicable.

65. When the pressure allowed on a boiler exceeds twenty-five (25) pounds per square inch, the bottom blow-off pipe and fittings from the boiler to the valve or valves, shall be extra heavy.

66. When the pressure allowed on the boiler exceeds one hundred and thirty-five (135) pounds per square inch, the bottom blow-off pipe shall have two (2) valves, or a valve and cock, and such valves, or valve and cock, shall be extra heavy.

SECTION XI—FEED WATER APPLIANCES.

67. Feed water shall not discharge in a boiler in close proximity to riveted joints in shell or furnace sheet.

68. When a pump, inspirator, or injector is required to supply feed water to a boiler of over fifty (50) horsepower, more than one such mechanical device shall be provided.

SECTION XII—STOP VALVES.

69. Each steam outlet from a boiler, except safety valve connection, shall be fitted with a valve located as near the boiler as practicable.

70. On all new boilers hereafter purchased, each steam outlet which is over two (2) inches in diameter, except a safety valve connection, shall be fitted with a stop valve or valves of the outside screw and yoke type, located as near the boiler as practicable. On boilers that

are at present fitted with stop valves of other types, when the same are renewed, they shall be replaced with stop valves of the outside screw and yoke type.

71. The stop valve, or valves, on the main steam pipe of a boiler shall be extra heavy when the pressure allowed exceeds one hundred and thirty-five (135) pounds. The fittings from boiler up to the valves shall be extra heavy, made to the manufacturers' standard for high pressure.

SECTION XIII—WASHING BOILERS.

72. All boilers shall be thoroughly washed out not less frequently than once every fourteen (14) days, excepting boilers using water from condensers, which shall be thoroughly washed out not less frequently than once every thirty (30) days. In special instances, the boiler inspection service may, at its discretion, and upon request of the head of department or division, extend these periods of time.

73. When boilers are washed all handhole plates and washout plugs shall be removed.

74. All gage cocks, water gage glass cocks, and fusible plugs shall be cleaned of scale and sediment whenever the boiler is washed, and if any are found defective, they shall be repaired or renewed.

75. An accurate record of all boiler washouts shall be kept posted adjacent to the boiler, using form PC 542 for this purpose.

76. All fusible plugs shall be examined on both sides at least once in every month of service, and, if defective shall be replaced.

BOILER INSPECTION SERVICE.

RULES GOVERNING THE CARE AND OPERATION OF BOILERS.

77. Immediately upon taking charge of the boiler, ascertain beyond a doubt whether the water in the boiler is at the proper level.

78. In case of low water with fire in the furnace, do not draw the fire, as this will intensify the heat and make matters worse, but immediately cover the fire with ashes or fresh coal (wet ashes or slack coal preferred), and close the ash doors. If oil is used as fuel, shut off oil supply from burners. Do not, under any circumstances, turn on the feed water or touch the safety valve. Let all the steam outlets remain as they are until the boiler has cooled off.

79. Keep the gage cocks clean, and try them frequently. See to it that all the connections to the water glass and water column are free. Do not entirely depend upon the water glass.

80. The blow-off valve must be used at least once in every twenty-four (24) hours that boiler is in service, and at least five (5) inches or two (2) gages of water blown out during said time. This will aid in keeping boiler and blow-off pipe clean. Never open the blow-off valve or cock with a jerk, as it is liable to let go and cause a serious accident. When boilers are equipped with surface or scum cocks, they must also be used once in every twenty-four (24) hours of service, reducing the water level at least one inch.

81. Try the safety valves frequently by carefully raising them from their seats; they sometimes stick, and care should, therefore, be exercised to keep them in good working order. If the safety valve is not blowing freely when the pressure gage indicates the stipulated pressure allowed in the inspection certificate, the cause should be ascertained immediately, and reported to the boiler inspection service. Tampering with or changing safety valves without proper authority may result in discharge from the service.

82. All boilers shall be washed out not less frequently than once in every fourteen (14) days or service, excepting boilers using water from condensers, which shall be thoroughly washed out not less frequently than once in every thirty (30) days of service. In special instances, the boiler inspection service may, at its discretion, and upon request of head of department or division, extend these periods of time.

83. In getting up steam on boilers—Fire shall be started in ample time, so that it will not be necessary to urge the boiler unduly. If oil is the fuel used, it is very important that steam be raised slowly; that is, no faster than it would be possible with coal as fuel. If this precaution is not observed, serious damage to the boiler is liable to result.

84. When cutting in boilers which are operated in battery, care should be taken to see that the pressure on the boiler being cut-in is equal to the one in service and under no conditions shall the valves be opened until the pressure is equalized.

85. When oil is used as fuel, the greatest precaution must be observed before lighting the fire to see that the drafts are opened for a sufficient length of time to remove the gases that may accumulate in the setting. Never turn on the fuel supply when starting up or after snapping out of burner without first introducing a lighted torch or burning waste into the furnace. Disregard of these precautions is liable to result in a serious accident.

86. Boilers and their appurtenances must be kept in a clean and efficient condition at all times.

87. A copy of this circular (large size) shall be kept

posted in a prominent place in each boiler room, and a copy in pamphlet form shall be given to each fireman.

GEO. W. GOETHALS,
Governor.

Foremen's Orders.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., July 1, 1914.

CIRCULAR No. 54-Revised:
Amendment No. 2:

Effective July 1, 1914, all foremen's orders and invoices will be priced, extended, and totaled by the storehouse or division issuing or transferring the material.

Two copies of foremen's orders covering expendable material and three copies of foremen's orders covering nonexpendable property, accompanied by adding machine tape showing the total value, will be sent to the Auditor daily by each storekeeper.

Advance copies of all invoices will be forwarded to the Auditor daily, as heretofore. As accomplished copies are received the Auditor will stamp the advance copies to show accomplishment and transmit same with an adding machine tape to the proper storekeeper weekly.

H. A. A. SMITH,
Auditor, The Panama Canal.

Additional Panama-Balboa Labor Train.

PANAMA RAILROAD COMPANY,
OFFICE, SUPT. OF RAILROAD TRANSPORTATION,
PANAMA, R. P., July 17, 1914.

TRANSPORTATION BULLETIN No. 29:

To all concerned—Effective at 5.30 a. m., Saturday, July 18, a new time table for the Panama-Balboa labor service will become operative. Effective with this time table an extra labor train will leave Panama at 8 a. m., daily, arriving at Balboa docks at 9.05 a. m. Returning, it will leave Balboa docks at 9.10 a. m., arriving at Panama at 9.25 a. m. This extra labor train is put in service to accommodate the passengers arriving from Colon on train No. 3 at 8.35 a. m.

F. R. BLUNT,
Superintendent of Railroad Transportation.

Misdirected Letters.

ANCON, C. Z., July 20, 1914.

The following insufficiently addressed letters originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be procured upon the request of the addressees:

Barnard, Marrian	Morton, W. H.
Bullard, A.	McCarthy, Lawrence
Burlington, Albert L.	Rudds, Felix
Clowe, V.	Williams, J. A.

LETTERS UNCALLED FOR JULY 15.

Arbogast, Joseph	Maheo, Harry C.
Antonio, Mongiu	Malcone, Mrs. Meselita
Anderson, Mrs. R.	McCauley, Wm. F.
Barchelder, Clarence W.	McGilroy, James
Banton, Wayne	McMillan, Mrs. Ella
Baucom, W. H.	McCarron, Mrs. T.
Becksell, Jesse R.	McHone, Chas. E.
Barrow, E. E.	Miles, John

Proposals for Excavation.

OFFICE OF CHIEF QUARTERMASTER,
CULEBRA, C. Z., JULY 15, 1914.

Sealed proposals will be received at this office until 3 p. m., Saturday, August 10, 1914, and then opened, for the excavation involved in laying a 30-inch pipeline between Gamboa and Miraflores. Specifications can be secured upon application to this office. Folio containing blueprints referred to in specifications may be obtained at this office upon placing a cash deposit of Five dollars (\$5) for the safe return of the prints. Proposals should be marked "Proposal for excavation," and addressed to Capt. R. E. Wood, Chief Quartermaster, Culebra, C. Z.

The La Boca Cricket Club has been granted the use of a plot of ground at the La Boca silver settlement for a cricket field.

COMMISSARY DEPARTMENT.

Trial Shipments of Special Rolls.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., July 17, 1914.

CIRCULAR No. 590:

Effective Wednesday July 22, we will make trial shipments of special rolls at one cent each, leaving Colon at 4.30 p. m. Please advise your customers to that effect and send your orders for such rolls to this office as early as possible for deliveries beginning on the Wednesday afternoon train.

BENJ. L. JACOBSON,
Depot Commissary.

Raisin Bread to be Baked Daily.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CRISTOBAL, C. Z., July 14, 1914.

CIRCULAR No. 508:

Effective Monday, July 20, raisin bread will be baked in the bakery of this depot daily. All standing orders for raisin bread should be revised, effective as of that date.

BENJ. L. JACOBSON,
Depot Commissary.

Commissary Hours.

The commissary stores are open during the following hours: From 8 a. m., to 12.30 p. m., and 3 to 6.30 p. m. The gold departments of the Cristobal store will open at 2 p. m., on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open until 7 p. m.

Cold Storage Prices.

Retail prices of cold storage provisions for the week beginning July 23, 1914:

‡Sold only from commissaries; no orders taken for delivery.

§Sold only from cold storage and not from commissaries.

Porterhouse roast includes any cut of hind quarter down to rump, and will not be cut if orders for steak will consume the supply.

Tenderloins on porterhouse will not be cut and sold separately.

Not less than ½ ham or ½ shoulders of fresh pork will be sold.

Daily cold storage orders will be filed and kept for at least one month.

Rainfall, July 1 to July 18, 1914, Inclusive.

75th meridian time

Hotel Aspinwall Launch Service.

The launch *Louise* will sail from the dredge landing at Balboa for the Hotel Aspinwall on Taboga Island at 9.10 a. m., on Monday, Thursday, and Saturday of each week. The time of sailing permits connection to be made with train No. 3, which arrives at Panama from Colon at 8.35 a. m., daily.

LOST—Watch fob, with metal checks I. C. C. 188169 and Panama Canal 47, on Saturday afternoon, July 18, along the pathway on the west bank of the Canal between Culebra and Paraiso. Finder please return to the Auditor's office, Empire, C. Z.

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

BALBOA.

F. C. Sheehan won the handicap pool tournament, which closed July 15, with S. T. Smith second, and J. Dubendorf third. There were 19 men entered. Sheehan won with a percentage of .923.

R. Watson is leading in the checker tournament, which was started Friday night, July 17, with six games won and none lost. James Burns is second with eight games won and four lost. A match game between the Culebra checker club and the Balboa club will be arranged shortly, the first of the series to be played at Balboa.

The library books and phonograph records, formerly at the Empire clubhouse, have been transferred to the Balboa clubhouse.

COROZAL.

The following are the high scores made in bowling on the local alleys during the past week: *Tenpins*—Thirsk, 247, 245, 207, 205, 201; Terittier, 205, 205; Parkis, 200. *Duckpins*—Harper, 104, 102; Davis, 104; Ryan, 100.

PEDRO MIGUEL.

A dual athletic meet was held on Wednesday, July 15, at Pedro Miguel, between the Corozal and Pedro Miguel boys. The boys were divided into two classes, those under 90 pounds, and those over 90 pounds. The events consisted of a 60-yard dash, running broad jump, running high jump, potato race, and relay race for the smaller boys, the 75-yard dash replacing the 60-yard dash of the smaller boys, with the running broad and high jumps, and potato and relay races for the larger boys. The Corozal team won with a total score of 43½ points, Pedro Miguel making 36½ points. This is the first of a series of three meets that will be held between the two towns. The next meet will be held in a few weeks at Corozal.

The high scores in bowling made during the past week were: *Men's duckpins*—Davis, 114; Piper, 115. *Men's tenpins*—Farrar, 209. *Rubber banded duckpins for ladies*—Mrs. Landers, 111.

E. C. Eggleston of Pedro Miguel and Harry Ducey of Corozal issue a challenge to any two players on the Isthmus for a match game of billiards.

Under the auspices of the ladies of Pedro Miguel and Paraiso a chicken dinner is being prepared for all the bachelors of Pedro Miguel and Paraiso for Friday evening, July 31, at 7 o'clock. A committee of bachelors is preparing a program of songs, instrumental and vocal solos, and a toast for the occasion.

Under the leadership of Mr. Ira W. Dye, the boy scouts were organized on Friday evening. Two groups of scouts will be formed, one of the small boys, and one of boys of 12 years and over.

CULEBRA.

There will be a "Smoker" for the men at the schoolhouse on Thursday evening, July 23. This will probably be the last entertainment of this kind under the auspices of the Culebra Y. M. C. A., as the schoolhouse will be dismantled about August 1.

GATUN.

The farewell reception given Companies A and C on Tuesday, July 14, was attended by about 400 people. In addition to the band concert and basketball game, the following program was carried out: Piano solo, Corporal Foster; soprano solo, Mrs. MacFarlane; recitation, Maud Cheatham; Irish melody, G. C. Fitzgerald; quartet, "Harmonious four;" monologue, Corporal Baker; baritone solo, Chas. Ducey; tenor solo, Private Conley; Kipling recitation, Private Magee; trumpet calls, Musician Rassiz; cornet imitation, Private Stamm; Scotch songs, Mrs. McPherson; German songs, Mrs. Weiss; Dutch comedy, Private Ertle; tenor solo, Corporal Foster.

John Kuller has been appointed day office assistant in the secretary's office.

Corporal Foster and Musician Kenie gave piano and drum music at the special motion picture entertainment on Saturday, July 18.

The gymnasium classes will be held regularly twice a week from now on.

CRISTOBAL.

The "Doves" were defeated at indoor baseball by the score of 10 to 8 on Friday, July 17.

Mr. and Mrs. Sloan won the married folks bowling tournament on Monday, July 13. Scores follow: Mr. and Mrs. Sloan, 488; Mr. and Mrs. Bevington, 478; Mr. and Mrs. Grove, 477; Mr. and Mrs. Buser, 465; Mr. and Mrs. Cotton, 453.

Messrs. A. Gibson, Collins, Petterson, Burns, and Buser, representing the dry dock, took two out of three games from Messrs. Russell, Pinney, Strong, Barte, and Garrett, representing the "Penpushers." The scores were: Dry dock, 849, 843, 772; "Penpushers," 799, 775, 937.

High duckpin scores for the week were, as follows:

Sloan, 106; Mrs. Sloan, 101; A. Gibson, 100; Garrett, 100.

High tenpin scores for the week were: Russell, 238; Barte, 235; Petterson, 204; Collins, 200.

A tenpin ragtime tournament is now in progress. The regular monthly single folks' bowling tournament will be held on Monday, July 27.

Dr. Henry Pittier, connected with the Smithsonian Institution, and at present on the Isthmus doing experimental work for the Panamanian Government, will give an illustrated lecture on the forests of Panama, on Thursday, July 30, under the auspices of the discussion club. Dr. Pittier has spent many years in the tropics, and is considered an authority on tropical dendrology. This is the monthly open meeting of the discussion club, and the general public is invited.

The 6-reel feature film, "The last days of Pompeii," will be shown on Friday night, July 24. The usual prices for moving picture shows will prevail.

Sixteen members of the boys' department enjoyed an outing over Cucaracha slide, on Friday, July 17. Mr. W. G. Comber, resident engineer of the Dredging Division, had a launch meet the boys at Paraiso and land them at the base of the slide. The ascent proved very rough and the last 100 yards very steep affording the boys an interesting experience. On the return trip they found the hydraulic pipeline good walking, and took the train at New Culebra.

Supplies for the Canal.

The following steamers, with supplies for The Panama Canal and the Panama railroad, arrived at the ports of Colon, Cristobal, and Balboa during the week ending July 11:

Brighton, July 6, from Mobile, with 198,373 board feet yellow pine lumber, for stock.

Prinz Sigismund, July 6, from New York, with tracings, for Division of Erection.

Ancon, July 6, from New York, with 482 crates roofing tile, 4,000 bags C. W. cement, 6,125 pieces hollow tile, for permanent buildings; four towing locomotives, for Division of Erection; 590 bundles conduit, for Electrical Division; 40 bundles iron pipe, for Panama Railroad Company; 121,991 bags Portland cement, 100 reels sash cord, 300 rolls building paper, for stock; and a miscellaneous cargo, the whole consisting of 133,684 packages, weighing approximately 6,660 tons.

Thames, (tug), July 8, with floating crane *Ajax*, for Division of Terminal Construction.

Cartago, July 8, from New Orleans, with 44 dredge dipper teeth, for Dredging Division; 487 barrels brick, for Division of Terminal Construction; 33,308 board feet yellow pine lumber, 10,843 board feet oak lumber, for Mechanical Division; 4,615 board feet yellow pine lumber, 298 bales straw, for stock.

Almirante, July 8, from New York, with 13 cases lighting material, 27 packages structural steel, for Fortification Division; 13 boxes steel plates, for Division of Erection.

Abangarez, July 9, from New Orleans, with 39 reels lead cable, for Panama Railroad Company; 12,809 board feet oak lumber, for Mechanical Division.

Damara, July 9, from Portland, with five spud timbers (Oregon pine), for Dredging Division; 10,000 board feet redwood lumber, 3,600 board feet redwood lumber, for permanent buildings; 571,305 board feet Douglas fir lumber, for stock.

Droning Olga, July 10, from Mobile, with 410 pieces crossosot piling, for Fortification Division; 5,208 board feet yellow pine lumber, for Dredging Division; 22,880 board feet oak lumber, 29,763 lineal feet yellow pine lumber, 120 bags dairy feed, 28 barrels fire clay, for stock.

Calamares, July 10, from New York, with 95 pieces angles, 100 pieces channels, 38 boxes writing ink, for stock.

Advance, July 11, from New York, with nine packages dumb waiter material, 172 rolls iron wire cloth, 33 cases woodwork, 33 boxes marble, 4,000 bags C. W. cement, 100 barrels plaster, for permanent buildings; 25 packages signal material, for Panama Railroad Company; 12 cases selfwinding clocks, for Mechanical Division; 3,825 board feet maple lumber, 400 garbage cans, 13 cases paper drinking cups, 25 packages plumbing material, 95 drums lubricating oil, 51,543 pieces clay conduit, for stock; and a miscellaneous cargo, the whole consisting of 56,747 packages, weighing approximately 666 tons.

Administrator's Safe.

ANCON, C. Z., July 18, 1914.

The personal effects of Duncan S. May, deceased, will be sold to the highest bidder. These effects consist of a suitcase containing clothing, two diamond rings and two gold nuggets, and may be seen at the Executive Office, Ancon. Bids upon the whole lot, or separate pieces, will be accepted up to the close of business on August 5. The administrator reserves the right to reject all bids.

JOHN K. BAXTER.

Administrator of Estates.

MOVEMENTS OF OCEAN VESSELS.

CANAL

RECORD

Volume VII.

ANCON, CANAL ZONE, WEDNESDAY, JULY 29, 1914.

No. 49.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,
THE CANAL RECORD,
Ancon, Canal Zone,
Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Opening of the Canal to Traffic.

The Secretary of War has announced that The Panama Canal will be opened to traffic on Saturday, August 15, to vessels drawing not to exceed 30 feet of water. This stipulation is made, because of the conditions at Cucaracha slide, which, although greatly improved, would not admit of the passage of vessels with absolute safety drawing a greater depth of water. This restriction, however, probably does not affect any vessel now using the Panama route regularly, either in the Atlantic or Pacific.

Arrival of Pontoon for Second 250-Ton Floating Crane.

The pontoon for the 250-ton floating crane *Hercules* arrived at Colon on Thursday, July 23, in tow of the tug *Schelde*, of the International Towing Company, of Rotterdam. The tow left Emden, Germany, on May 30, and was 56 days on the way, as compared with 74 days for the *Ajax*, which was considerably overdue at the time of its arrival.

The *Hercules* was towed to Dock 14, Cristobal, and moored alongside, in the rear of the *Ajax*. The forces of the contractor are engaged in completing the superstructure erection of both cranes. The crosshead of the *Ajax* was hoisted into place on Wednesday, July 22, and the supplementary work on the spindles is in progress. The work of jib erection, on the east backfill of the middle level at Gatun Locks, is nearing completion.

Weather Observatory at New Administration Building.

Clearing and excavation are in progress on top of the spur of Ancon Hill just south of that on which the new Administration Building stands and north of the former cemetery, for the erection of an 80-foot steel tower on which will be mounted an anemometer, an anemoscope, and a sunshine-recording machine. The tower will rest on concrete footings, will be 17 feet wide at the base, and will

be selfsupporting, with a ladder on one side.

It is proposed to have the equipment to be installed on this tower supplant that on the timber tower in Ancon, and to transfer the Ancon observatory to the Administration Building. A special room for the seismographs, with solid concrete insulated piers to support the machines, has been fitted up in the basement of the building, at the northwest corner.

Widening Channel to Cristobal Docks.

Authority has been given for additional dredging at the juncture of the Atlantic entrance section of the Canal with the channel leading to the Cristobal docks, in order that large vessels may make the turn with greater speed and safety. The present channel leading to the docks is 600 feet wide throughout its length of 2,100 feet, and joins the 500-foot Canal channel at right angles. The axis of the Canal at this point lies due north and south. The juncture will be widened by dredging away a triangular space on the northeast corner (on the port bow of vessels coming into the docks), for a distance of 660 feet along each channel. It will allow a large ship to swing into the dock channel without approaching too close to the side of either channel.

The widening will be carried to 41 feet below mean sealevel, the proposed depth of the Canal and dock channels, and will require the removal of approximately 10,000 cubic yards of mud and earth. The excavation will be done by the seagoing suction dredge *Caribbean*, which is now on the Atlantic side, engaged in the maintenance of channel.

Removing the "Teredo."

It having been found impracticable to raise the drill barge *Teredo* entire, it was decided to cut it to pieces. This is being effected by the method of using old lengths of condemned fire hose, filled with dynamite, and placed along the line at which it is desired to direct the force of the explosion. This makes a fairly clean cut, and the sections sheared off are raised by the wrecking barges, assisted by the dipper dredge *Paraiso*. The first large section was lifted out on Monday, July 27.

The *Teredo* was purchased on April 20, 1908, from the Maryland Steel Company of Sparrows Point, Md., for \$35,727. It was received, knocked down, on February 23, 1909, and reerected at the Balboa shipways; the total cost of the vessel, erected for service, was \$46,902. The barge was of steel, 112 feet long by 36 feet in the beam, and eight feet deep. The maximum draft of the vessel was five feet. It was equipped with four 8 by 8-inch engines, with the necessary boilers, to operate the spuds, and with six Ingersoll-Rand "H-64" rock drills, with 5½-inch diameter cylinders, and with rails for the drill frames to slide on.

A coroner's jury, consisting of Charles Rose, Dr. H. C. Clark, and C. F. Quinby,

called to investigate the explosion, has held several meetings to identify the recovered bodies, and on Wednesday afternoon, July 29, held a session to enter more fully into the causes of the explosion.

Improved Accommodations at Colon Detention Station.

The 3-story frame building, situated in the east end of the Colon Hospital grounds, formerly occupied by the nurses, has been turned over to the quarantine service for use as a detention station until such time as permanent facilities are provided. The old detention station will continue to be used for the accommodation of steerage passengers, but all of the first-class passengers will be housed in the newly acquired building, which contains 40 rooms, in addition to a large dining room. A temporary kitchen was added to the building last week, and all of the cooking, both for the first and second-class passengers, will be done there. The food for the steerage passengers will be taken to them from the kitchen at each meal. The grounds around the new quarters are well shaded; there are benches and a small covered pavilion, so that the guests are able to spend part of their period of waiting in the open if they choose.

Cruise of a Whaler.

The steamship *Hidalgo*, which arrived at the port of Balboa on July 20, and cleared on July 22 with a cargo of stores, is one of three tenders connected with a large Norwegian whaling vessel now on cruise in the South Pacific Ocean, and reported at present about 300 miles south of Panama City. The whales are captured from the tenders and towed by them to the principal vessel, which is equipped with complete apparatus for flensing the whales, rendering the blubber, and refining the oil, and is thus able to discharge the refuse portions overboard, and load with only the most valuable products. The crew of the *Hidalgo* reported that it is the expectation of the fleet to set sail for Norway with a full cargo about the first of September.

Canal Excavation in June.

The grand total of Canal excavation to July 1, 1914 was 223,103,369 cubic yards, leaving 9,244,631 cubic yards remaining to be excavated, according to the revised estimate of July 1, 1913.

The total excavation in June was 1,167,870 cubic yards, as compared with 1,115,412 cubic yards in May. The output of the dredges constituted the greater part of the amount excavated, and more than one-half of the total was taken out in the Culebra Cut section, principally at Cucaracha slide. The dry excavation during the month was confined to the work of steamshovels on the banks of Culebra Cut prior to the suspension of operations there on June 8, and dry dock excavation at the Balboa terminals. The hydraulic oper-

ations at Gold Hill resulted in the removal of 103,875 cubic yards.

No concrete was placed in the locks, dams, or spillways during June, and no additional fill was made in dams.

The detailed figures of excavation, by sections, follow:

Obituary.

The funeral services of David Kett and James F. Smith, two of the victims of the premature explosion of dynamite at Cucaracha slide on July 20, were held at St. Luke's Hospital chapel, Ancon, on Sunday morning, July 26, under the auspices of the Order of Red Men. Mr. Smith was also a member of the Spanish War Veterans, and a number of the members of the local camps was present at the services. He was buried in the Red Men's plot at Mount Hope cemetery. The bodies of David Kett and Joseph W. Jones will be shipped to the United States for interment, in charge of Mrs. Kett, on August 3. The body of Charles Sackett, the fourth of the American victims of the explosion, was found on Saturday, July 25, in the drill frame of the *Teredo*. It was buried the same day in the cemetery at Corozal.

David Kett, the master of the *Teredo*, was a naturalized American, born at Amherstburg, Ontario, Canada, in 1876. He was appointed

to the Canal Service on January 10, 1910, and was assigned to duty on the *Teredo*, where he had been continuously up to the time of his death. Prior to coming here, he was in the employ at various times of the Dunbar Dredging Company of Sault Ste. Marie, Mich., Buffalo Dredging Company of Buffalo, and M. Sullivan, dredging contractor, of Detroit. He is survived by his wife and two children, who have been living at East Balboa.

Joseph W. Jones, a brother-in-law of Kett, was born at Houghton, Mich., in 1874. He entered the Canal Service as a machinist in the Gorgona shops of the Mechanical Division on April 25, 1911; was transferred to the old Pacific Division, as a steam engineer, on August 27, 1912, and assigned to duty on the *Teredo*. Prior to coming to the Isthmus, he was a machinist at various times for a number of Milwaukee firms. He is survived by his wife, and three children, a son and two daughters, who live at No. 729 Bartlett avenue, Milwaukee, Wis.

James F. Smith was born in New York City, in 1867. He entered the Canal Service, as a blacksmith in the old Pacific Division, on July 22, 1909, and was assigned to work on the *Teredo* on April 20, 1912. Prior to coming here, he followed his vocation in New Jersey and New York, having been for a time at the Brooklyn Navy Yard. During the Spanish-American War, he was a corporal in Company I, Fourth New Jersey Volunteers. His wife and two children, who live in Balboa, survive him. A brother, W. D. Smith, resides at No. 2111 Mifflin street, Philadelphia, Pa.

Charles Sackett was born in New York State, in 1866. He was appointed to the Canal Service, as a pipefitter in the old Pacific Division, on April 6, 1909. On September 8, 1909, he was made an engine runner; on April 19, 1910, he was transferred to the former Atlantic Division as a foreman at Porto Bello quarry; on July 26, 1910, he was retransferred to the Pacific Division, and on August 1 of

the same year he was assigned to the position of drill runner on the *Teredo*. He was employed, previous to his coming to the Isthmus, with the Carter Oil Company, and later, with the South Penn Oil Company of Parkersburg, West Virginia. A stepdaughter, Curilda Weekly, lives at No. 14 Atlantic avenue, Parkersburg.

The body of Private Charles W. Dodds, Company E, Tenth Infantry, on patrol duty at Miraflores Locks, was found on the Panama railroad main line track, a few feet north of the cement storage shed at Corozal, at about 4.20 a. m., on Monday, July 27. He was on pass, and it is supposed that he missed the last train out of Panama on Sunday night, and was walking to the lock camp, when he was struck by a train. He was born at Yorktown, Ind., was 26 years of age, unmarried, and enlisted on December 16, 1913, at Indianapolis, Ind. An uncle, William Dodds, lives at No. 332 Indiana avenue, Indianapolis. The funeral was held, with military honors, at 3 o'clock on Monday afternoon. Interment was at the Corozal cemetery.

Gerald D. Bliss of Cristobal has received a cable message announcing the death of his sister, Mrs. Gladys Bliss Haynie, wife of Walter T. Haynie, who was private secretary to the late Lieut.-Col. D. D. Gaillard up to September 2, 1909, when he resigned from the Canal Service and went to Chicago. Mrs. Haynie was at one time employed as a teacher in the Division of Schools, and was married at Pedro Miguel on July 22, 1908. She was 26 years of age, and is survived by her husband, and two children, a daughter three years old, and a son four months old. Her mother, and a brother and sister live at Sherman, Chautauqua County, N. Y. Another brother, Gerald D. Bliss, resides at Cristobal, and two sisters, Mrs. Carl P. Hoffman and Miss Genella Bliss, live at Ancon. The funeral was held at Sherman on July 24.

SOCIAL LIFE OF THE ZONE.

Noonday Prayer Meetings at Balboa Shops.

At the request of 18 employes of the Balboa shops, permission has been given for the use of building No. 8 at the shops, for the holding of noonday prayer meetings. The building is not yet completed, but it has been furnished with benches for the accommodation of the men, and a pulpit is to be added. The prayer meeting is held every day from 11.30 to 12.30. The Rev. Harry Compton of the Methodist Church, Panama, took the meeting on Wednesday, July 22; other preachers assist whenever possible. The meeting is conducted by one of the men in the absence of a minister. The average attendance during the week has been about 12.

Methodist Memorial Church.

An offer has been made to the missionary minister of the Methodist Episcopal Church in Panama, by a person in the United States interested in the work of the church in Panama and Latin America, to build a memorial church at any point which shall be decided upon by the minister. The donor's name has not yet been made public, but the church will be in memory of a child who has recently died. The edifice will probably occupy a site in La Boca.

Church Notes.

The series of revival meetings that have been in progress in the Union Church at Cristobal will be continued during the present week. The meetings have been conducted by the missionary minister from Costa Rica, the Rev. A. B. DeRoos. The expenses for the series are being borne by the Home Mission Board of the Southern Baptist Convention, and by collections taken locally.

The missionary auxiliary of the Union Church of the Canal Zone, with headquarters at Empire, will hold its regular monthly meeting on Friday afternoon, August 7; the place of meeting will be announced later. Requests for information regarding the society and its work should be addressed to the secretary, Mrs. F. T. Greener, Empire.

Panamanian Students Visit New Administration Building.

Three hundred pupils of the grade schools of the city of Panama, accompanied by several teachers, visited the new Administration Building of The Panama Canal at Balboa, on Friday afternoon, July 24. After making a tour of the finished parts of the building, and

viewing the marble rotunda, the various architectural features of the whole being pointed out to them, the pupils were called to military order in front of the building, where they went through a short practice drill in calisthenics, and concluded by singing the Panamanian National Hymn.

Lecture on Personal Hygiene.

The lecture on personal hygiene to be given under the auspices of the junior league of St. Luke's Hospital chapel will take place at Ancon Hall on Wednesday afternoon, August 5, at 4 o'clock. Any one interested will be admitted under the following conditions: League members free; children under 12 years, 10 cents; over 12 and adults, 15 cents, United States currency. The lecture will be given by Dr. M. E. Connor.

PERSONAL.

M. Philippe Bunau-Varilla, who, for a number of years, was an engineer in the service of the French canal companies, and, following the independence of Panama on November 3, 1903, was appointed the first Minister of the Republic to the United States, arrived from Paris, via New York City, on the *Tenadores*, on Friday, July 24. He will spend several days on the Isthmus inspecting the Canal.

Mr. F. C. Clark, superintendent of Pacific Locks, returned on Wednesday, July 22, on the *Allianca*, from a leave of 42 days spent in the United States.

I. B. of S. S. and D. M.

The next regular meeting of the International Brotherhood of Steamshovel and Dredge-men will be held at Ancon lodge hall on Sunday, August 2, at 1.30 p. m.

R. G. WARREN, *Secretary-Treasurer*.
COROZAL, C. Z., July 25, 1914.

Missing Man.

Any one having information regarding the whereabouts of James McScott, who is supposed to be on the Isthmus, is requested to communicate with S. J. Berman, 7709 Linwood avenue, Cleveland, Ohio.

Señor Luis S. S. Ortega has been placed in charge of the Spanish Consulate in Panama, as vice-consul.

WANTED—A young man to do some tutoring in review work in algebra, geometry, grammar, geography, United States history, and arithmetic. Please apply to the office of the Superintendent of Schools, Ancon, C. Z.

The estates of these deceased employes of the Panama Canal or the Panama Railroad Company are now in process of settlement, and any claims against these estates, or any information which might lead to the finding of heirs or to the recovery of property, bank deposits, postal savings or postal money order deposits, or any other moneys due them, should be presented at once to the Administrator of Estates, Ancon, C. Z. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once.

EXECUTIVE ORDER

To Require Ocean Going Vessels to be Fitted With Wireless Apparatus.

By virtue of the authority vested in me, I hereby establish the following Order for the Canal Zone:

Section 1. From and after the first day of July, 1915, it shall be unlawful for any ocean-going steamer of the United States, or of any foreign country, carrying 50 or more persons including passengers and crew, to leave or attempt to leave any port of the Canal Zone unless such steamer shall be equipped with an efficient apparatus for radio communication in good working order in charge of a person skilled in the use of such apparatus, which apparatus shall be capable of transmitting and receiving messages for a distance of at least 100 miles, night or day; provided, that the provisions of this Order shall not apply to steamers plying only between the Canal Zone and ports less than 200 miles therefrom.

Section 2. The master or other person being in charge of such vessel which leaves or attempts to leave any port of the Canal Zone in violation of any of the provisions of this Order shall, upon conviction, be fined in a sum not to exceed Five Thousand Dollars (\$5,000), and any such fine shall be a lien upon such vessel, and the vessel may be liable therefor in the District Court of the Canal Zone, and the leaving or attempting to leave by any vessel from each and every port of the Canal Zone shall constitute a separate offense.

Section 3. This Order shall take effect from and after this date.

WOODROW WILSON.

THE WHITE HOUSE,
July 9, 1914.

[No. 1988.]

EXECUTIVE ORDER

Authorizing the Board of Admeasurement to Administer Oaths to Witnesses, and to Compel their Attendance.

By virtue of authority vested in me, I hereby establish the following Order for the Canal Zone:

Section 1. The Board of Admeasurement of the Canal Zone, and the respective members thereof, are hereby authorized to administer oaths to witnesses appearing before the board, or before any member thereof, to testify in matters within the jurisdiction of the board; and upon application to the District Judge, the board may obtain process to compel the attendance of witnesses and the production of books and papers. Any person who fails to obey the process of the Court, or who refuses to be sworn, or who refuses to answer any material or proper questions, after being duly sworn, shall be punished in the manner prescribed in the Penal Code for contempt of court.

Section 2. This Order shall take effect on and after this date.

WOODROW WILSON.

THE WHITE HOUSE,
July 9, 1914.

[No. 1989.]

Installation of Officers.

The officers of Gatun Lodge, No. 5, Independent Order of Odd Fellows, for the second term of 1914, were installed at Cristobal lodge hall on Friday evening, July 17. Following is the list: Noble grand, J. H. Poole; vice-grand, W. H. Kromer; secretary, M. J. Tuttle; treasurer, C. E. Pring.

CANAL WORK IN JUNE.

Monthly Report of the Governor to the Secretary of War.

CULEBRA, C. Z., July 23, 1914.

The Honorable the Secretary of War,
Washington, D. C.

SIR: I have the honor to submit the following report of operations on the Isthmus for the month of June, 1914:

Department of Operation and Maintenance.

Division of Erection—Work was confined chiefly to erection of chain fender machines and chain fender sump pumps. Backfilling and cleaning up were continued, and Miraflores Lake was cleared of floating débris. Electrical work on Miraflores Spillway machines, guard valve machines at Pedro Miguel, and all drainage sump and culvert sump pumps of the Pacific locks was completed.

Tests of the hydroelectric station were continued, and the major portion of the plant was turned over to the Electrical Division, for operation, on June 18. The transmission line is complete from Cristobal to Balboa, except for five special towers, contract for which was let during the month. The Miraflores control board was completed and tested, and a lockage was made on June 24 with remote control.

Thirty-one lockages were made at Gatun, 28 at Pedro Miguel, and 30 at Miraflores.

Electrical Division—The net output of the power plants was: Gatun, 611,350 kilowatt-hours; Miraflores, 1,763,090 kilowatt-hours; Empire, 103,030 kilowatt-hours; Balboa, 8,185 kilowatt-hours.

The output of the Balboa air compressor plant was 312,030,510 cubic feet of free air, compressed to 105 pounds; Empire, 63,859,454 cubic feet. Installations in the new and reconstructed quarters, and in the new shops at Balboa, were continued.

Division of Municipal Engineering—In addition to maintenance work, work was in progress on municipal improvements in the city of Panama. The work of maintaining air and water service lines was assigned to this division on June 16. Construction of the new pumping station at Gamboa was begun, and the other construction work in connection with the new water works for Panama and vicinity was continued.

Meteorology and hydrography—Rainfall was above the station averages at eleven stations, and deficient at eight stations. The monthly totals ranged from 5.64 inches at Miraflores, to 17.78 inches at Gamboa. The maximum precipitation in one day was 5.18 inches, at Gamboa. The total yield for Gatun Lake watershed was eight per cent below the 7-year normal for June, but the lake continued to rise, making it necessary to open the spillway gates to keep the water from rising above plus 85.

Division of Terminal Construction.

PACIFIC TERMINALS.

Dry docks—Design and construction were continued on dry dock No. 1. Excavation amounted to 50,183 cubic yards, and all the material taken out was rock. Two steamshovels were employed.

Quay wall and piers—Studies were continued on pier No. 1 and quay walls l-j-m-n and d-e-f. A ninth scheme was drawn up, and estimates were prepared, to compare the costs of all schemes previously considered for landing for oil ships. Excavation amounted to 480 cubic yards, concrete placed, 5,413 cubic yards, piles driven, 14,925 linear feet.

Coal and fuel oil plants—Designs for the

manifold layout and the steel boiler supports were approved, and preliminary plans for oil cribs were submitted and type of construction approved. An estimate of the total cost of the fuel oil plants is in course of preparation. Concrete placed in connection with the coal pocket amounted to 1,548 cubic yards.

Balboa shops—Design and construction were continued on the shop buildings.

ATLANTIC TERMINALS.

East breakwater—Work on this project included installation of tools in the machine shop, driving of piles, laying and ballasting of tracks, setting up a standpipe for watering locomotives, and the erection of a warehouse, sawmill shed, and other temporary structures.

Coaling plant—The loads imposed by the superstructure were carefully reviewed and the attention of the Washington Office invited to errors and discrepancies detected. The design of the superstructure was proceeded with. The driving of piles for both the east and west bridge track foundations was completed, and work on the concrete wall for these foundations was continued. The use of Chagres River gravel in concrete was begun about the middle of the month. The work of assembling and sinking caissons proceeded satisfactorily. The air compressor from Gatun was installed and operated for the first time on June 30; it is believed this will be very satisfactory.

Cristobal piers—Pier No. 10 is 90 per cent completed; the work during the month was mostly on the shed. Pier No. 9 is practically completed. Wash drill soundings were started on pier No. 7, and 267,854 cubic yards of dredging were done.

Dredging Division.

The status of dredging on June 30 was, as follows:

LOCATION.	Cu. Yds.	Remaining. Cu. Yds.
Miraflores Locks to Pacific..	60,872	1,991,373
Miraflores Lake	46,925	266,516
Culebra Cut	530,003	263,168
Gatun Lake	51,000
Gatun Locks to Atlantic	100,982	461,973
Total Canal prism.....	738,782	3,034,030
Balboa harbor.....	215,746	4,343,897
Cristobal terminals.....	160,178
Fortifications.....	100,357
Miscellaneous.....	55,790
Total general.....	532,061	4,343,897
Grand total.....	1,270,843	7,377,927

A survey of the prism from Gatun Locks to the sea shows a fill of 175,800 cubic yards from March 1 to July 1.

Culebra Cut—Eight dredges removed 93,673 cubic yards of earth and 436,371 yards of rock from the Canal prism. Following is a statement of the excavation in detail:

LOCATION.	Earth. Cu. Yds.	Rock. Cu. Yds.	Total. Cu. Yds.
Hagan's slide.....	4,373	4,373
East Culebra slide....	433	56,551	56,984
West Culebra slide....	87,208	87,208
Cucaracha slide.....	93,199	288,239	381,438
Total.....	93,632	436,371	530,003

The destruction of water hyacinths in Gatun Lake was continued.

Mechanical Division.

The quantity of work was slightly less than in May, and in the foundry it dropped off 25 per cent, making it necessary to furlough six molders six days each. The amount of overtime was materially less, due to the decrease in quantity of work and to improved supervision. A new organization of work per-

mitted a reduction in the supervisory force. The new cost accounting system worked more satisfactorily on account of the increasing experience of the force, and it is undoubtedly well adapted to the situation. The hostling of locomotives at Gatun passed to the division during the month.

Special work at Balboa shops consisted chiefly of the manufacture of dredge pipe, and caissons for the coaling plant and pier foundations, and preparing Lidgetwood cars for the work of hauling rock from Sosa Hill, at the Pacific entrance, to the east breakwater, at the Atlantic entrance. At Paraiso, the work was chiefly on dredging equipment, including the fitting up of the new 15-yard dipper dredge *Paraiso*. At Cristobal, the work was largely on dredging equipment, but caissons for the coaling docks and piers were also constructed. Fourteen pieces of equipment were docked.

For the whole division, shop orders issued and completed consisted of: Uncompleted, May 31st, 512; authorized during June, 795; total, 1,307; completed during June, 820, uncompleted June 30th, 487. The foundry output was: Iron, 250,931 pounds; steel, 89,599; brass, 19,713; total, 360,243 pounds. Hostling was done on 5,757 pieces of equipment, repairs on 5,721 cars and 752 other pieces of rolling stock.

Division of Canal Transportation.

The pooling of launches at the Atlantic entrance was advanced, so that the combined service was begun July 1. The Division of Lighthouses was transferred to this division; the Board of Local Inspectors did its work, and the preliminary work for admeasurement of vessels was continued.

Port of Balboa—Thirty vessels arrived and 33 departed. Of the arrivals, 10 were of American registry, 10 British, five Peruvian, two Chilean, one Panamanian, one German, and one Norwegian. Two launches were measured for certificates, and measurements were begun on three ships. The revenues amounted to \$4,910.80 for tolls, and \$450 for pilotage.

Port of Cristobal—Eighty-five vessels arrived at Cristobal, of which 45 were British, 14 German, 11 Norwegian, nine American, three French, and one each Dutch, Italian, and Spanish. Eighty-one departed. No vessels were measured for Canal certificates. The tolls collected amounted to \$3,408.16, and pilotage fees to \$1,110; total, \$4,518.16.

Lights and buoys—All range towers have been completed and lights are installed. All beacons in Culebra Cut, except those which cannot be built because of slides, have been completed and the lights are installed. Work on other beacons, post lights, range and reference targets has been advanced. Construction of pole transmission lines was continued. All spar buoys at both entrances have been placed on station.

Material to complete gas generating and compressing plant at Balboa, in order that gas tanks may be charged at that plant, has been installed, and turned over to the Mechanical Division.

A sailing chart on a scale of 1:20,000, in two sections, has been prepared, each section measuring 56 by 72 inches over the border. The first section embraces the territory from deep water in Limon Bay to Mile 29, and the second section from Mile 29 to deep water in Panama Bay. The original drawings have been forwarded to the United States, where they will be photolithographed and printed in colors, on a scale of 1:40,000.

Board of Local Inspectors—Eleven vessels were inspected and certificated; six chauffeurs' licenses, and one for operation of a fire engine; and nine licenses for navigators of motor boats were issued. Fourteen boilers on floating equipment were inspected. Six appraisals of floating equipment were made.

Supply Department.
FORCE.

The force reports for the last week in June show 29,673 employees at work. Of these, 4,257 are white Americans, 1,248 are European laborers, and the balance are West Indian laborers and artisans. The occupants of Government quarters numbered 7,638 Americans, 1,478 Europeans, and 8,822 West Indians. The force decreased about 1,500 men during the month.

BUILDINGS.

Work on the new Administration Building at Balboa advanced materially, but the progress on quarters for gold roll employees continued slow. Work on the removal and reerection of frame quarters continued, a number of officials' houses having been taken down at Gatun and Culebra. Work on all the silver married quarters at La Boca was completed. Originally, 300 apartments were authorized, which was later increased to 400. Altogether, 413 apartments were completed and are now occupied, bringing in a monthly rental of over \$2,000.

MATERIALS AND SUPPLIES.

Movements of material continued heavy, although the value of the material received was somewhat less than last month. The material came forward in 40 steamers, total weight of cargo, exclusive of lumber, ties, and piling, being 11,130 tons.

SUBSISTENCE.

There was a profit on the line hotels of \$705.71; a loss on the Hotel Aspinwall of \$695.41; a profit on laborers' mess of \$2,137.19, and a loss on the Hotel Tivoli of \$302.81, making a net profit on the subsistence operations for the month of \$1,844.68. The Hotel Washington report for May shows a net loss of \$2,255.06.

COMMISSARY.

The Ancon commissary was opened for business on June 15. Its opening relieves the congestion at the Balboa commissary, and it is also much more convenient for employees living in the Ancon district. A readjustment of commissary prices was made, a general increase being made on beef and other meats. The price of ice was cut 25 per cent. Prices on all articles of hardware and dry goods were materially reduced.

Accounting Department.

On June 30, the cash balance in Canal construction appropriations was \$6,587,969.10, with an estimated amount to be paid therefrom in July of \$3,800,000. The cash balance in fortification appropriations was \$4,673,964.16. The regular rolls for June, exclusive of fortification rolls of \$69,801.55, amounted to \$1,176,038.74. The accrued leave and omitted time rolls for June, exclusive of fortification rolls of \$36,268.87, amounted to \$906,463.91. The rolls for June were, as follows:

APPROPRIATIONS.	Regular rolls	Accrued leave
Officers and employees on Isthmus.....	\$246,635.12	\$384,074.74
Isthmus pay rolls.....	840,254.30	386,711.93
Officers and employees, Canal Zone.....	35,948.57	62,799.80

Sanitary pay rolls.....	15,489.30	960.06
Canal connecting.....	2,950.00	
Miscellaneous material	855.00	1,371.66

The payments during July by the disbursing clerk in the United States, were \$1,386,765.08, by the Paymaster on the Isthmus, \$2,005,348.59, a total of \$3,392,348.67. Of this amount, \$201,331.65 was paid to the Panama railroad commissary. The collections during the month repaid to appropriations, amounted to \$351,387.75, while the amount deposited as miscellaneous receipts was \$14,873.75, of which \$4 was collected as tolls.

The collections of Canal Zone funds amounted to \$23,260.32; money order funds, \$289,594.67; postal savings funds, \$122,600; clubhouse funds, \$9,833.60. The payments were: Canal Zone, \$58,986.14; money orders, \$367,452.80; postal savings, \$152,480; clubhouse, \$7,647.61.

Department of Health.

The diminishing death rate in the Canal Zone and the increasing death rate in the city of Panama, which has been noted for some time, is believed to be due largely to a shifting of population from the Canal Zone to Panama. The census which is now being taken will settle this point. The health of the employees has continued good during the month. No case of yellow fever, smallpox, or plague originated on, or was brought to the Isthmus. The number of names on the rolls for the preceding month was 47,579.

The total number of admissions to hospitals and quarters was 1,511, or a rate of 381.09 per thousand per annum, as compared with 407.92 for the preceding month, and 472.50 for the corresponding month of last year. The total number of deaths from all causes was 20. Of these, 13 died from disease, or 3.28 per thousand per annum, as compared with 5.74 for the preceding month, and 3.27 for the corresponding month of last year. The diseases causing the greatest number of deaths were, as follows: Lobar pneumonia, two; organic disease of heart, two; tuberculosis, two. The number of employees per thousand constantly sick was 11.69, compared with 11.65 for the preceding month, and 14.98 for the corresponding month of last year.

The disease causing the highest admission and noneffective rates in hospitals was malaria, or 62 per thousand per annum, and 1.62 per thousand, respectively. The corresponding admission rate for last month and the same month of last year was 50 and 49; 27 per cent of all admissions was due to this cause. The next highest admission rates were for venereal diseases, diseases of the digestive system, and the diseases of the respiratory system. These four classes of diseases caused 51 per cent of all admissions. The admission rate for typhoid fever per thousand per annum was .00, as compared with .75 for the preceding month, and .00 for the corresponding month of last year.

The admission rate to hospitals, and death rate for disease for black employees were 139.79 and 3.67 per thousand per annum, as compared with 350.66 and 1.43 for white employees. The noneffective rate for disease and injuries for black employees per thousand was 10.20, as compared with 18.67 for white employees. The admission rate to hospitals for malaria was 53.23 per thousand per annum for blacks, as compared with 103.47 for whites.

Canal Zone—The number of persons, white and colored, living in the Canal Zone is estimated at 54,655, among whom there were 44 deaths. Of these, 42 deaths were from disease, a rate of 9.22 per thousand per annum, as

compared with 12.93 for the preceding month, and 12.39 for the corresponding month of last year. Of the total deaths from disease, the percentage under five years of age was 33, compared with 42 last month.

Panama—In Panama City, with an estimated population of 47,172, there were 156 deaths. Of these, 150 deaths were from disease, a rate of 38.16 per thousand per annum, as compared with 32.56 for the preceding month, and 30.02 for the corresponding month of last year. Of the total deaths from disease, the percentage under five years of age was 55, compared with 52 last month.

Colon—In Colon, with an estimated population of 20,232, there were 48 deaths. Of these, 44 deaths were from disease, a rate of 26.10 per thousand per annum, as compared with 30.25 for the preceding month, and 21.34 for the corresponding month of last year. Of the total deaths from disease, the percentage under five years of age was 36, compared with 31 last month.

Executive Department.

COURTS.

Eight cases were disposed of in the Supreme Court and, the work of the court having been concluded, it went out of existence on June 30. In the District Court, two civil, 27 criminal, and 60 probate cases were settled. In the Magistrates' Courts, 22 civil and 408 criminal cases were tried.

POSTS.

Money order sales amounted to \$289,593.58, and the fees to \$1,409.69; receipts from stamp and card sales and newspaper postage, \$6,713.78; deposits in savings accounts, \$122,600; withdrawals, \$152,379.

POLICE AND FIRE.

Arrests numbered 394, of which 368 were of men. Five convicts were committed to the penitentiary and 14 were discharged; total in confinement at the close of the month, 75. The cost of guarding and subsisting the convicts was \$1,228.92, and the value of their work was \$1,411.30.

Nine fires occurred, with a total loss of \$253.

SCHOOLS.

The net enrollment in the white schools was 1,270, the average number belonging, 824.1, and the average daily attendance, 789.5. In the colored schools, the net enrollment was 1,492, the average number belonging, 663.3, and the average daily attendance, 531.5.

Panama Railroad.

Traffic congestion continued throughout the month, due to arrival of American-Hawaiian Line ships, which kept up the increased tonnage from the Pacific to the Atlantic side. During the month, 8,256 tons of sugar and miscellaneous cargo were towed through the Canal on barges, northbound; southbound, approximately 2,000 tons.

Five ships of the Panama Railroad Steamship Line arrived at Cristobal, delivering 801 first-class and 32 steerage passengers. Six ships sailed for New York, carrying 568 first-class and 98 steerage passengers. Full cargoes were carried both ways.

Construction work on Piers 7, 8, 9, and 10 was continued, and Pier 8 is now complete.

Transisthmian duct line work progressed satisfactorily, there being constructed 36,974 feet.

Work on the new coaling trestle and dock at the north end of Dock 13, Cristobal, was started on June 22. The trestle and dock will be used for coaling commercial vessels until the

permanent coaling plants are placed in operation. About 10 per cent of this work was completed to June 30.

Respectfully,
GEO. W. GOETHALS,
Governor.

Rainfall, July 1 to July 25, 1914, Inclusive.

OFFICIAL CIRCULARS.

Steamboat Inspection Service.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 7, 1914.

CIRCULAR No. 644-1:

FEES FOR INSPECTION.

Paragraph 30 of Circular 644 is modified by inserting after the words "or which may hereafter be, allowed by law," the words:

"For each row boat or panga equipped with detachable, motor, \$1.

GEO. W. GOETHALS,
Governor.

Parcel Post Packages.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 6, 1914.

CIRCULAR No. 613-1:

REQUESTS FOR FREE ENTRY.

Postmasters of Canal Zone post-offices are hereby authorized to sign for the Executive Secretary requests of gold employes for the release of parcels upon which no duty is payable, when such requests are duly authenticated in writing by the heads of departments or divisions, or by district quartermasters.

GEO. W. GOETHALS,
Governor.

Issue of Identification Certificates by Unauthorized Timekeepers.

THE PANAMA CANAL,
OFFICE OF EXECUTIVE SECRETARY,
CULEBRA, C. Z., July 24, 1914.

All concerned—Attention is called to the fact that there have been a number of recent instances where identification certificates have been issued by unauthorized timekeepers, these certificates being issued in case brass checks have been lost.

Field timekeepers will not issue identification certificates unless they have been authorized to sign papers of this character.

By direction of the Governor.

C. A. McILVAINE,
Executive Secretary.

Notice to Mariners.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 24, 1914.

CIRCULAR No. 643-3:

CRISTOBAL HARBOR.

1. The third-class red can buoy heretofore marking the westerly edge of the shoal marked out from the end of the mole off Cristobal Point has been replaced by a black painted gas buoy showing a fixed white light.

2. The buoy is moored in 32 feet of water, and from it the end of the mole bears 103° true, distant about 930 feet.

3. Vessels entering or leaving Cristobal Harbor are cautioned to keep to the southward of an imaginary line between this buoy and the end of the trestle of pier No. 7, now under construction, and not to pass between the buoy and the end of the mole.

4. A third-class spar buoy has been placed to mark the riprap off the end of the mole off Cristobal Point.

5. This buoy is moored in 16 feet of water and marks a small channel for launches only. Launches and small boats are cautioned not to pass between this buoy and the mole.

GEO. W. GOETHALS,
Governor.

Service Ratings.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 7, 1914.

CIRCULAR No. 604-1:

1. The following definitions of ratings for workmanship and conduct are given for general guidance, so that one standard may be used by all. It is realized, however, that there are many factors entering into the question of ratings in individual cases which cannot be covered by rules, and in such special cases the judgment of the official in charge will govern.

WORKMANSHIP.

2. The mark "Excellent" indicates that the employe has performed the duties of his position faithfully, accurately, with good judgment and minimum error, without waste of time, and with minimum expense to the Government; that neither the quantity nor quality of his work has been subject to deserved criticism, either as a whole or in specific instances. An unimportant or very minor error will not be taken into consideration. An employe need not necessarily be brilliant, nor of exceptional ability, to attain this rating. Any employe who thoroughly knows his business and performs his work faithfully, intelligently, diligently, and for the best interest of the Service, may attain this rating.

3. The mark "Very good" should be given in cases where, for any reason, the mark "Excellent" cannot be given, and where a better rating than "Good" is deserved.

4. The mark "Good" indicates that the employe has performed the duties of his position in a satisfactory manner, that his work and attention to duty have been average; it should be used in those cases where the employe cannot be marked "Excellent" or "Very good", due to insufficient experience, incomplete training, or imperfect physical condition. This rating may be given in cases where either the quantity or quality of the employe's work has been subject to a small degree of criticism or has needed closer supervision than that of others, although on the whole his work has been good and satisfactory.

5. The mark "Mediocre" indicates that the employe's service has been only moderately good, not good enough, in fact, to make his employment desirable. It would be applied in case an employe were incapable of performing or were disinclined to perform a standard quantity of work, or if his work were of indifferent quality, or if, though a good enough workman, his habits or his attitude toward his work rendered him undependable or trying to his superiors.

6. The mark "Poor" indicates unfitness of the employe to occupy the position in which the rating is given. This mark should be given in all cases where the employe has demonstrated that, because of poor quality of work, poor quantity, or inattention to his duties, he is not fitted for the place. In case he is apparently well qualified for a lower grade of the same trade or occupation, the fact may be stated on the rating report.

CONDUCT.

7. In rating general conduct, it is proper to take into consideration the following factors:

- (a) Attendance.
- (b) Cooperation with fellow workmen, superiors and subordinates.
- (c) Interest in the work and general disposition to act for the good of the Service.
- (d) Personal habits.
- (e) Character, such traits as loyalty, honesty, truthfulness, courage, temperance, sound judgment, subordination, etc.

8. The rating "Excellent" in conduct should be given to an employe faithful to duty, interested in his work, willing and helpful in his general attitude, and of good integrity and reputation.

9. The rating "Very good" in conduct should be given where the employe's conduct is subject to minor impeachment on one or more counts of the above schedule, but on the whole the man is of good character and deserving of commendation.

10. The rating "Good" in conduct should be given where the employe may have some faults not of serious character, and where he has gotten along satisfactorily. It would also cover cases of those who perform their duties perfunctorily and whose traits of character are negative rather than positive.

11. The rating "Mediocre" need not be used in rating conduct.

12. The rating "Poor" should be used where the employe seriously fails to maintain a proper standard of conduct in any of the five essentials above enumerated.

GEO. W. GOETHALS,
Governor.

Accountable Official.

THE PANAMA CANAL,
ACCOUNTING DEPARTMENT,
EMPIRE, C. Z., July 24, 1914.

CIRCULAR No. 68:

Effective July 25, 1914, Mr. W. R. Holloway, supervisor, Division of Operation and Maintenance, will cease to be accountable official and will transfer his property to Mr. F. C. Clark, superintendent of Pacific Locks, who is hereby designated an accountable official of The Panama Canal.

H. A. A. SMITH,
Approved: Auditor, The Panama Canal.
GEO. W. GOETHALS,
Governor.

Subsistence for Employes on Floating Equipment of Dredging Division.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 25, 1914.

CIRCULAR No. 680:

1. All employes on floating equipment of the Dredging Division will be carried on the rolls at a nonsubsistence rate, effective August 1, 1914.

2. When subsistence is furnished, deduction will be made from the pay of gold employes at the rate of \$20 per month, or at the rate of 67 cents a day when the period subsisted is less than one month, the total charge for subsistence not to exceed \$20 in any one month.

3. The time rolls will be kept in such manner as to

show all gold employes on each piece of floating equipment separately, instead of being arranged alphabetically, as at present.

4. The division will furnish to the chief timekeeper and to the Auditor, at the close of each month, a statement showing:

(a) Each piece of floating equipment upon which subsistence is regularly furnished to gold employes.

(b) A list of employes who, during that month, were carried for a part of their time on equipment where no subsistence was furnished, and a part of the time on equipment where subsistence was furnished.

5. An employe absent, for any cause, from a piece of equipment on which subsistence is furnished, for a period not exceeding two days, will be charged for subsistence the same as if actually present and subsisted. This rule will not apply when an employe is detailed from a subsisted to a nonsubsisted piece of equipment.

6. An employe assigned to a subsisted piece of equipment will be charged for a day's subsistence if given a day's time on the subsisted piece of equipment, but no charge for subsistence will be made for less than one day.

GEO. W. GOETHALS,
Governor.

Delay in Sending in New Time Books.

THE PANAMA CANAL,
OFFICE OF EXECUTIVE SECRETARY.
CULEBRA, C. Z., July 24, 1914.

All concerned—There has been some delay in sending in promptly the new time books to the timekeeping office. The books must be in the timekeeping office at Balboa Heights in the forenoon of the day following the close of each 4-day period, and the chief timekeeper will report to this office promptly all failures to comply with this requirement.

By direction of the Governor.

C. A. McILVAINE,
Executive Secretary.

Paymaster, Panama Railroad.

THE PANAMA RAILROAD COMPANY,
OFFICE OF LOCAL TREASURER,
COLON, R. P., July 17, 1914.

HEADS OF DEPARTMENTS:

Effective with this date, Mr. B. M. Fennell is appointed paymaster of the Panama Railroad Company, vice Mr. G. E. Mohr, resigned.

Approved: R. H. WARDLAW,
Local Treasurer.
C. H. MORTSEY,
Superintendent.

Examinations by Board of Local Inspectors.

THE PANAMA CANAL,
BOARD OF LOCAL INSPECTORS,
ANCON, C. Z., July 21, 1914.

The Board of Local Inspectors will conduct examinations at the administration building, Ancon, on Wednesday, July 29, 1914, beginning promptly at 2 p. m., for persons desiring the following classes of licenses: Pilots, masters, mates, marine engineers, chauffeurs, and navigators of motor boats. All applicants for license must procure from the office of the board, Ancon, forms of application and information respecting the filling out of the same not later than the day previous to the examination. All persons desiring chauffeurs' licenses must provide themselves with automobiles with which to demonstrate their ability properly to operate the same.

The demonstration test for applicants for chauffeurs' licenses will be given on Tuesday, the day preceding the regular examination, at 2 p. m., at the administration building, Ancon; on Wednesday, the day of the regular examination, for out-of-town applicants, at 2 p. m., at the administration building, Ancon.

Applicants for license as navigator of motor boats will be required to give a demonstration of their ability to operate such boats, and will be obliged to provide themselves with boats for this purpose. This test will be given on Thursday, the day following the written examination, as follows: At Cristobal, upon arrangement with the captain of the port; at Gamboa, at 8 a. m., and at Balboa, at 2 p. m. Applicants for the test at Cristobal or Balboa should present themselves at the office of the captain of the port; at Gamboa, the deputy inspector will be present at the Panama railroad station at the hour abovementioned.

By direction of the chairman of the board.

W. H. HYDE,
Clerk of the Board.

Married.

BUEHLER-ROCHE—On Friday evening, July 24, at St. Luke's Hospital chapel, Ancon, Miss Gertrude V. Roche to Mr. G. H. Buehler, the Rev. H. R. Carson officiating. Canal Zone residence, Ancon.

FOUND—Near Ancon post-office, pass book issued by the Royal Bank of Canada branch at Kingston, Jamaica, B. W. I. Rightful owner may obtain same by communicating with police headquarters, Ancon, C. Z.

COMMISSARY DEPARTMENT.

Sale of Shoes.

A sale of shoes will be held at the following commissaries on the days shown:

Pedro Miguel, August 4 to August 8, inclusive.

Cristobal, August 11 to August 15, inclusive.

Sale of Hats.

A sale of hats will commence at the Ancon commissary on Monday, August 3, 1914.

Cold Storage Lists.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., July 15, 1914.

CIRCULAR No. 172:

District quartermasters, commissary storekeepers—The practice of scratching off cold storage lists items in stock at Cristobal, but not carried in local commissaries leads to misunderstanding on the part of solicitors and customers as to what is actually in stock.

Hereafter, you will please circle items that will have to be procured from Cristobal. Your list will then show as scratched only those items that are out of stock in both Cristobal and line stores.

R. E. WOOD,
Chief Quartermaster.

Commissary Stores Closed for Inventory.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,
CULEBRA, C. Z., July 23, 1914.

CIRCULAR No. 106-1:

District quartermasters, commissary storekeepers—The following stores will be closed for the regular monthly inventory from 12.30 p. m., Friday, July 31 to 8 a. m., Saturday, August 1:

Gatun, Gamboa, Las Cascadas, Culebra, Paraiso, Pedro Miguel, Balboa, La Boca, Naos Island.

The following stores will be closed for an audited inventory from 12.30 p. m., July 31, to 8 a. m., August 3: Toro Point, Cristobal, Camp Biedr, Monte Lirio, Empire, Corozal, Ancon.

Commissary Form 15 will be used in taking this inventory.

Post notices to the above effect prominently in all commissaries, and have salesmen and solicitors notify customers of the period during which commissaries will be closed.

R. E. WOOD,
Chief Quartermaster.

Commissary Hours.

The commissary stores are open during the following hours: From 8 a. m., to 12.30 p. m., and 3 to 6.30 p. m.

The gold departments of the Cristobal store will open at 2 p. m., on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open until 7 p. m.

* Indicates advance from preceding list.

† Indicates reduction from preceding list.

**Indicates 5 cents allowed for return of bottle.

†Sold only from commissaries; no orders taken for delivery.

*Sold only from cold storage and not from commissaries.

Porterhouse roast includes any cut of hind quarter down to rump, and will not be cut if orders for steak will consume the supply.

Tenderloins or porterhouse will not be cut and sold separately.

Not less than ½ ham or ½ shoulder of fresh pork will be sold.

Daily cold storage orders will be filed and kept for at least one month.

CANAL CLUBHOUSES.

BALBOA.

The first "Smoker" at the Balboa clubhouse will be held Friday night, July 31. All the men of Balboa and Ancon are invited to attend.

The Balboa checker club will play the Culebra checker club at the Culebra clubhouse on Monday evening. It is expected that the Culebra checker club will play a return match at Balboa.

A beginners' class in Spanish has been started. All those interested are requested to see the secretary.

An effort is being made to hold song services at the local clubhouse on Sunday evenings.

PEDRO MIGUEL.

High bowling scores made for the past week were, as follows: *Duckpins*—Davis, 100; Holloway, 102, 107; Whiston, 123; Vandeburgh, 107. *Ladies' rubber banded duckpins*—Mrs. Landers, 103, 104; Mrs. Westendorf, 103.

The bachelors dinner to be given on Friday evening, July 31, is for all the bachelors of Paraiso and Pedro Miguel. It is being prepared by the ladies, and the committee of bachelors working on the program has arranged a program of toasts, songs, and solos.

The Pedro Miguel Christian Endeavor Society gave a social in the clubhouse hall on Friday evening. Eighty-five people were present, and were entertained by a program of games and other exercises. A lunch was served.

A committee of men and ladies is preparing a Southern social for Tuesday evening, August 4, for all the people of Paraiso and Pedro Miguel. A program of games and songs will be arranged, followed by a watermelon feast.

Supplies for the Canal.

The following steamers, with supplies for The Panama Canal and the Panama railroad, arrived at the ports of Colon, Cristobal, and Balboa during the two weeks ending July 25:

Orubia, July 13, from New York, with 10 cases safety fuse, for stock.

Prinz Joachim, July 13, from New York, with 271 kegs bolts, for stock.

Santa Catalina, July 13, from San Francisco, with 14,000 board feet redwood lumber, for Fortifications Division; 272,195 board feet redwood lumber, 16,987 board feet cedar lumber, 1,241,309 board feet fir lumber, for stock.

Falk, July 15, from New York, with 265 barrels and 250 crates gasoline, for stock.

Heredia, July 15, from New Orleans, with 119 barrels

paving brick, for Division of Terminal Construction; 12,622 board feet oak lumber, for Mechanical Division; 727 bales straw, for stock.

Santa Marta, July 16, from New York, with six kegs hoisting cables, for Dredging Division.

Parismina, July 16, from New Orleans, with 38 kegs cable for Panama Railroad Company; 28,850 board feet yellow pine lumber, for Mechanical Division.

Pastores, July 17, from New York, with 32 crates and boxes heating apparatus, for Mechanical Division; three fender chains, for Department of Maintenance.

Panama, July 17, from New York, with 307 barrels plaster, 4,000 bags C. W. cement, five cases woodwork, for permanent buildings; 16 cases woodwork, for Division of Municipal Engineering; 5,790 board feet maple lumber, for Mechanical Division; 27 cases lighting material, 60 cases, four skids, electrical machinery, for Fortifications Division; 29 kegs cable, for Panama Railroad Company; 70 boxes varnish, 43 boxes wire cloth, 42 crates and boxes plumbing fixtures, 2,127 bales hay, 50 coils manila rope, 2,388 board feet maple lumber, 102 kegs bolts, 834 bundles corrugated galvanized sheets, 5,104 bags cement, for stock; and a miscellaneous cargo, the whole consisting of 13,466 packages, weighing approximately 845 tons.

Prinz Eitel Friedrich, July 20, from New York, with 44 kegs bolts, for stock.

Turrialba, July 22, from New Orleans, with 19,341 board feet, yellow pine lumber, for Mechanical Division; 153 barrels paving brick, for Division of Terminal Construction; 373 bales straw, for stock.

Metapan, July 22, from New York, with 199 kegs boat spikes, for stock; 31 cases electrical material, for Panama Railroad Company.

Cristobal, July 22, from New York, with 425 crates tile, for permanent buildings; 210 pieces pipe, for Dredging Division; 119 crates tile, 10 crates ventilators, for Division of Municipal Engineering; six crates ventilators, for Department of Maintenance; 125,394 bags cement, 500 rolls paper, 51 crates plumbing fixtures, 250 bundles shovels, for stock, and a miscellaneous cargo, the whole consisting of 127,041 packages, weighing approximately 6,519 tons.

Allianca, July 22, from New York, with 20 universal couplings, for Dredging Division; 20 kegs copper wire, for Department of Maintenance; 15 cases woodwork, for permanent buildings; 14 cases woodwork, 38 cases water meters, for Division of Municipal Engineering; 12 kegs cable, for Panama Railroad Company; 20 crates rubber hose, 108 pieces black pipe, for stock; and a miscellaneous cargo, the whole consisting of 517 packages, weighing approximately 133 tons.

Cartago, July 23, from New Orleans, with 13,763 board feet, yellow pine lumber, 13,261 board feet poplar lumber, for Mechanical Division; 39 kegs cable, for Panama Railroad Company; 11,130 board feet yellow pine lumber, 321 bales straw, for stock.

Tenadores, July 24, from New York, with 12 crates indicator apparatus, for Fortifications Division; 53 boxes window glass, 85,600 pounds billets, for stock.

Proposals for Excavation.

OFFICE OF CHIEF QUARTERMASTER,

CULEBRA, C. Z., JULY 15, 1914.

Sealed proposals will be received at this office until 3 p. m., Saturday, August 10, 1914, and then opened, for the excavation involved in laying a 30-inch pipeline between Gamboa and Miraflores. Specifications can be secured upon application to this office. Folio containing blueprints referred to in specifications may be obtained at this office upon placing a cash deposit of five dollars (\$5) for the safe return of the prints. Proposals should be marked "Proposal for excavation," and addressed to Capt. K. E. Wood, Chief Quartermaster, Culebra, C. Z.

Proposals for Backfill.

THE PANAMA CANAL,

OFFICE OF CHIEF QUARTERMASTER,

CULEBRA, C. Z., JULY 22, 1914.

Sealed proposals will be received at this office until 3 p. m., Monday, August 10, 1914, and then opened, for placing 42,000 yards of backfill at Fort Anador, and 16,825 yards of backfill at Perico Island. The material for the above to be obtained from Balboa dump in the vicinity of the new radio station. The above quantities to be either increased or decreased at the option of The Panama Canal Government within reasonable limits. Copy of specifications to be secured upon application to this office. Bids must be accompanied by cash, certified check, or post-office money order for five per cent of amount of bid. Proposals should be marked: "Proposals for backfill," and addressed to Capt. K. E. Wood, Chief Quartermaster, Culebra, C. Z.

Administrator's Sale.

ANCON, C. Z., JULY 18, 1914.

The personal effects of Duncan S. May, deceased, will be sold to the highest bidder. These effects consist of a suitcase containing clothing, two diamond rings and two gold nuggets, and may be seen at the Executive Office, Ancon. Bids upon the whole lot, or separate pieces, will be accepted up to the close of business on August 5. The administrator reserves the right to reject all bids.

JOHN K. BAXTER.

Administrator of Estates.

MOVEMENTS OF OCEAN VESSELS.

Panama Railroad Company's steamers sail from Piers 8, 9, and 11, Cristobal, at 3 p. m.

Movements of Vessels at Port of Balboa.

The arrivals and departures of steamships at the port of Balboa during the week ending at noon July 25, were, as follows:

Arrivals—July 19, *Oriana*, from Valparaiso; July 20, *Quito*, from Colombian ports; *Hidalgo*, whaling tender, from South Pacific Ocean; *Ucayali*, from Callao; July 21, *Enador*, from Guayaquil; *Peru* (P. S. N.) from Callao; July 23, *City of Para*, from San Francisco.

Departures—July 18, *Salvador*, to Salina Cruz; July 20, *Palena*, to Valparaiso; *Pachitca*, to Callao; July 21, *Quilpué*, to Guayaquil; *Santa Catalina*, to Callao; July 22, *Hidalgo*, to South Pacific Ocean; *Oriana*, to Valparaiso; July 25, *Barracouta*, to Central American ports.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,

THE CANAL RECORD,

Ancon, Canal Zone,

Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Steamship "Cristobal" Makes Test Trip Between Entrance Channels.

In anticipation of the opening of the Canal to traffic on August 15, as directed by the Secretary of War, a test voyage from Cristobal to Balboa was made on Monday, August 3, by the steamship *Cristobal* of the Panama Railroad Steamship Line. A return trip was made on Tuesday, August 4.

The *Cristobal* is a steel twin-screw steamship of 9,606 gross, and 6,195 net tons. It is 489½ feet long overall, 58 feet in the beam, and was drawing about 25 feet of water at the time of passage. It is a sister ship of the *Ancon*, with which an official opening voyage will be made on August 15.

The *Cristobal* left Dock 9, Cristobal, shortly after 7 a. m., stopped before the lower guard gates of Gatun Locks at 8:15; entered Gatun Lake shortly after 11; entered Culebra Cut at 1 p. m.; reached Pedro Miguel at 2:30; reached Miraflores Locks at 3:40; entered the Pacific channel about 5:45; and arrived opposite Balboa about 6:30. The voyage was without operating incident, other than some minor difficulties with towing locomotives at Gatun and Pedro Miguel Locks. On the return trip the *Cristobal* left Balboa at 7:30 a. m., August 4, and arrived at Cristobal at about 4 p. m.

It is expected to operate the *Advance* through the Canal on Sunday, August 9. Applications for passage by old employees will be received at the office of the Governor.

Removal of Part of Mount Hope Stores.

Section B of the Depot Quartermaster's storehouse at Mount Hope, which is filled with heavy material, such as bolts, nuts, etc., will be moved to the new storehouse at Balboa as soon as the necessary arrangements can be made. The wooden supports under this section have become weakened and in time would probably give way under the heavy load. As over 50 per cent of the issues are now made from the Balboa storehouse, and

the proportion will probably increase from now on, the transfer will be of advantage as far as distribution is concerned. The removal of the remainder of the stock in the Mount Hope storehouse will probably not be effected until late in the year.

Steamship Sailings Suspended.

The Colon office of the Hamburg-American Line, acting under orders from the resident director of the company in New York City, has announced the temporary suspension, on account of hostilities, of the services through the Caribbean Sea, connecting with New York. The various vessels will remain in their present ports until further orders. The following are now in Colon: *Savoia*, which arrived Saturday, August 1, from St. Thomas; *Grunewald*, arrived August 2 from Cartagena; *Prinz Sigismund*, arrived August 3 from Cuba; and *Sachsenwald*, arrived August 4 from Kingdon. The *Prinz August Wilhelm*, which sailed from Colon on Tuesday, July 28, is now at Santa Marta.

Representatives of other lines connecting with the Isthmus say they anticipate no curtailment of their services.

Award for Paving Brick for Pier No. 1, Balboa.

Contract has been entered into with the Murphysboro Paving Brick Company of Murphysboro, Ill., for the manufacture of 243,810 square feet of paving brick or blocks, four inches high and about eight and one-half inches long, at the price of \$0.23½ per square foot, amounting to \$56,685.82, and for 6,030 lineal feet of special brick or blocks at \$0.19 per lineal foot, or a total of \$1,145.79. This brick is for use in paving head wall and quay wall e-f on pier No. 1 at the Balboa terminals. Fifty per cent of the brick on this order is to be delivered on or before July 30, and the remainder on or before August 14.

Contract for Rice Straw.

The firm of Joseph V. Ferguson and Company of New Orleans, La., has been awarded the contract for furnishing the Supply Department with 300,000 pounds of rice straw for use as bedding at The Panama Canal corrals. The price per hundred pounds was \$0.6975, or a total of \$2,092.50.

Contract for Bonding Employees.

Contract was entered into on July 1 with the Maryland Casualty Company of Baltimore, Md., for the bonding of employees of The Panama Canal who are required to furnish sureties. The award was made to the lowest bidder, the only other regular proposal received being that of the Illinois Surety Company at 30 cents per \$100. Under the contract with the Maryland Casualty Company, the rates are considerably lower than heretofore; for postal clerks, the rate is 65 cents for each \$1,000 per annum; for postmasters, \$1.25 for each \$1,000 per annum,

and for all other employes, \$1.70 for each \$1,000 per annum. The previous bond was executed by the Illinois Surety Company.

New P. R. R. Time Table.

A new passenger train time table will go into effect at 12.01 a. m., on Sunday, August 9. The changes are principally in the time of leaving and departure caused by the operation of trains on a slower schedule. The main line trains, which now cover the distance between Colon and Panama in one hour and thirty-five minutes, and one hour and forty minutes, will, after Saturday, be operated on a one hour and 45-minute schedule.

Progress on New Balboa Pier.

The concrete for the last section of the superstructure of the new pier, No. 1, of the Balboa terminals was poured on Friday, July 17, and on the following day, the concrete was poured for the last section of superstructure of the headwall.

The pier is 1,000 feet long and 200 feet four inches wide; the floor on either side and across the end is supported on concrete caissons, there being 209 of these sunk into bedrock to an average depth of 61 feet below mean sealevel. The concrete used in its construction, including what was required to fill caissons, amounts to 27,077 cubic yards. Sinking the caissons was begun in February, 1913, and completed in February, 1914. The superstructure was begun in March, 1914.

The head wall connects the land end of the pier with the eastward extension of the quay wall from the lumber wharf, and extends beyond it a distance of 303 feet to the north, to the point from which it is proposed to build the next pier that may be authorized. For a distance of 246 feet in slips Nos. 1 and 2, it is 38 feet wide, the ends being 66 feet wide, forming a bay in which will rest a floating landing for small boats, made necessary by the rise and fall of the tide. An ornamental concrete balustrade and seat extends along the water face. This wall is supported by 65 caissons sunk to an average depth of 47 feet below mean sea level, and 7,084 cubic yards of concrete were required in its construction.

There yet remains to be built about 1,000 feet of quay wall west of the lumber dock; the foundation work of the 6-foot caissons is about 30 per cent completed. Forces of the Division of Terminal Construction are now engaged in sinking these caissons, and in finishing the superstructure of pier No. 1 and the head wall. This work includes setting the snubbing posts and track along the two faces of the pier, attaching across the central space of the pier a number of tie rods to prevent any outward movement of the walls when the slips are dredged, paving the floors, and placing a pile fender along the full length of the face.

The new concrete docks, when completed,

will have about 5,700 lineal feet of water front.

Excavation of the slip between the quay wall and pier No. 1, is in progress. Pipeline suction dredge No. 85 is advancing toward the head wall along that portion of the quay wall east of the lumber dock, and the old French ladder dredge *Gopher* is working in its rear, making a cut nearer to pier No. 1.

Awards for Kerosene.

Contract has been entered into with the Liberty Oil Company of New Orleans, for supplying The Panama Canal, during the fiscal year 1915, with 420,000 gallons of kerosene, in cans and cases, at the price of \$0.131 per gallon, or a total of \$55,020, and with the Texas Company for supplying 140,000 gallons in 50-gallon steel drums at \$0.0845 per gallon.

PERSONAL.

Mr. W. R. McCann, supervisor in the former Division of Erection, resigned, effective July 29, and, accompanied by Mrs. McCann, sailed for the United States, Tuesday, Aug. 4. He was appointed to the Canal Service on October 21, 1907, and upon arrival on the Isthmus, was assigned to duty at Culebra in the old Department of Lock and Dam Construction. He resigned on October 12, 1908, to take a special 2-year course in engineering at the University of Wisconsin, but was reappointed to the Canal Service on June 18, 1910, as assistant engineer in the First Division. Under the direction of the Electrical and Mechanical Engineer, he designed the entire transmission system of The Panama Canal, and, as supervisor, has had charge of its installation, remaining to see the work nearly completed. From July 27 to September 1, 1913, he was on detached duty in the United States to supervise electrical and structural steel drawings of the four new substations, material for which was urgently required by The Panama Canal. Prior to coming to the Isthmus, he was with the Chicago Edison Company from 1904 to 1907, and again in the summer of 1909. Recently, he has been engaged in the preparation of a thesis on the transmission system, to be submitted to the University of Wisconsin for a master's degree. He is a member of the American Institute of Electrical Engineers, and is secretary-treasurer of the Panama section of that organization; also, an associate member of the American Society of Civil Engineers, and a member of the Society for the Promotion of Engineering Education.

Mr. Walter F. Beyer, assistant engineer in charge of the Division of Lighthouses until

its merger on June 16 with the Division of Canal Transportation, terminated his service with The Panama Canal, effective July 15, and has gone to Peru on a month's visit. He was appointed to the Canal Service on February 16, 1911, as assistant engineer in the First Division, and upon his arrival on the Isthmus was charged by the former Assistant Chief Engineer with the preparation of a detailed project for lighting and buoying The Panama Canal, and the approaches thereto. This work, with the exception of the west breakwater light in Colon Harbor, has been practically completed. Before coming to the Isthmus, he had been connected with the United States Lighthouse Establishment since 1893, with headquarters for the greater part of the time at Detroit, Mich., his work consisting of designing and constructing light stations on the Great Lakes. He resigned from the Lighthouse Establishment in January, 1911.

Verdict of Coroner's Jury on "Teredo" Explosion.

The coroner's jury, impaneled to investigate the cause of the dynamite explosion which wrecked and sank the drill barge *Teredo*, causing the death of six employes, has rendered the following verdict:

ANCON, C. Z., July 29, 1914.

We, the coroner's jury impaneled to inquire into and determine the fact and cause of death, and responsibility therefor, of David Kett, J. W. Jones, J. F. Smith, Charles Sackett, James Springer, and Evans Boyce, having viewed the bodies, and identified them as those of the persons abovenamed; visited the scene of the explosion; examined witnesses and taken testimony, find, that the abovementioned deceased persons came to their death as a result of injuries received when the drill barge *U. S. Teredo* was wrecked and sunk by a premature explosion of dynamite amounting to about 3,200 pounds, contained in eight drilled holes in the Canal prism under water near the east bank of the Canal, opposite Cucaracha slide, about 1.05 p. m., Monday, July 20, 1914.

From a careful consideration of all evidence and our observations, we do further find that the explosion was accidental, and we believe that it was probably caused by using a steel drill bar in a drill machine to tamp or force a charge of dynamite into partially loaded hole No. 6 under drill machine frame No. 1 (or A) of said drill barge, this operation being under the direction and personal handling of Capt. David Kett, while in the performance of his duty as foreman in charge of all work and men on board the drill barge *U. S. Teredo*.

CHARLES ROSE, FREDERICK QUIMBY, H. C. CLARK,
Jurors.
C. W. BARBER, Coroner.

The Panama railroad embankment, south of Pedro Miguel, will be widened for a short distance, in order to provide space for laying the Gamboa-Miraflores pipe line. Material for this purpose will be obtained from the dry dock excavation at Balboa, as the use of rock from the dry dock pit for armoring the Naos Island breakwater has been temporarily discontinued.

TEST OF EMERGENCY DAM.

Full Head of Water Against East Dam at Gatun.

All the emergency dams guarding the lock approaches were tested, as far as practicable, directly after their completion and accepted as satisfactory. A supplementary test has since been made on the east dam at Gatun Locks, to determine its behavior under pressure of a full head of water, with Gatun Lake at normal level and an empty chamber on the downstream side of the dam. This is as near the final test as can be made. The ultimate test of the dams, for their primary duty of checking the rush of water through the lock chamber if the gates should be broken down, will be made, if ever, only in consequence of accident. The test under full head of stationary water was meant to show the amount of leakage through the crevices between the gates and at the sill at the bottom of the chamber, against which rest the lower ends of the girders holding the gates; and any deflection of the horizontal truss across the chamber, supporting the pivot end of the gate girders.

The dam was swung into closed position and the gates lowered and wedged. The intermediate gates of the upper chamber were closed, and water was admitted to fill the upper section to the level of the lake. The upper guard and operating gates were then opened, and the chamber was emptied through the culverts. This made a head of water of 45 feet on the upstream side of the dam.

The greatest leakage occurred at the bottom of the gates. Under the heavy pressure, the water came through with great velocity, and in a kind of spray; as well as could be discerned, the leakage was principally at the pockets in the sill into which the ends of the girders had been swung. The culverts were then closed, and the chamber was allowed to fill from the leakage. The leakage through the dam was measured by the rate of filling of the lock; under the maximum head it amounted to 950 cubic feet per second. The surface rose five feet in the first 10 minutes, and the chamber filled to the level of the lake in two hours and 50 minutes. This was the 400-foot section of the lock; to have filled the entire 1,000-foot chamber would have required about seven hours. The surface current on the upstream side of the dam was so slight that it could not be measured; a north breeze blowing at the time caused the water to appear to be flowing toward the lake.

Measurements of the deflection of the horizontal truss were made by means of a steel wire, stretched between the side and center walls of the lock, close by the truss. They showed maximum movement in a vertical plane amounting to .097 foot under the increasing head of water, and .079 foot under decreasing head.

Award of News Agency Privilege.

The Panama railroad news agency privilege for a period of five years, dating from August 1, 1914, has been awarded to I. L. Maduro, Jr. of Panama City. Four proposals were received, as follows: Albert Lindo, at \$2,000 per annum; A. S. Fisher, at from \$2,100 to \$2,400 per annum; Chas. E. Mead, at \$4,500 for the entire 5-year period, and I. L. Maduro, Jr., at \$3,072 per annum. The previous contract was held by Albert Lindo, and was based on a sliding scale, namely, \$1,800 per annum for the first two years, \$1,900 per annum for the second two years, and \$2,000 for the fifth year.

Insane Employees.

Name.	Check No.	Native of	Isthmian residence.	Employed by	Date of commitment.
Solomon Brown.....	146580	Jamaica.....	Panama.....	Second Division.	July 29.
John Henry.....	71829	Antigua.....	Balboa.....	P. R. R.....	July 27.
Gabriel Torval.....	85487	Guadeloupe....	Gatun.....	P. R. R.....	July 27.

The estates of these insane employes of the Panama Canal or the Panama Railroad Company are now in process of settlement, and any claims against these estates, or any information which might lead to the finding of heirs or to the recovery of property, bank deposits, postal savings or postal money order deposits, or any other moneys due them, should be presented at once to the Administrator of Estates, Ancon, C. Z. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once.

Award for Material for New Cristobal Pier.
The United States Steel Products Company has been awarded the contract for furnishing the material for the steel cylinders and forms in connection with the construction of the new concrete pier, No. 7, of the Panama railroad, at Cristobal. The order consists of 4,285,063 pounds of steel for the 6-foot cylinders;

620,953 pounds of steel for the cylinder forms; 714 pounds of wrought iron lifting hooks, 102 in number, for the steel forms; 182,768 pounds of rivets, and 9,120 pounds of bolts and nuts, the whole aggregating 5,098,618 pounds at \$0.01447 per pound, or a total of \$73,777.33.

The launch Q has been transferred from the

Supply Department to the Mechanical Division.

The Governor has approved the recommendation of the Executive Secretary that such schools as may be required during the next school year be maintained at Las Cascadas, Empire, and Culebra, at the expense of the Canal Zone Government.

MATERIALS FOR CONCRETE.

Consumption of Sand, Cement, and Crushed Rock about One-Third of Former Rate.

With the increased use of Chagres River gravel in concrete for the Canal work, which is being laid now at about half the rate at which concrete was placed during the height of construction, the consumption of sand and rock has fallen to about a third of what it was when the massive masonry of the locks and spillways was under construction. Cement is being used at about 45 percent of its former maximum rate. The principal pieces of work in which these materials are being used at this time are the terminal facilities at both ends of the Canal, the permanent buildings for operation and for employees' quarters, the fortifications, and municipal engineering construction.

Sand is being brought from Punta Chame at the rate of approximately 20,000 cubic yards per month, which is about half of the production from this beach when the lock work was in full swing, or about 30 per cent of the former output from both Chame and Nombre de Dios. The floating equipment now in the sand service consists of the ladder dredge *Gopher* and the tug *Chame*, handling seven 500-yard barges. The sand is unloaded at the lower east flare wall of Miraflores Locks, and handled direct into dump cars.

From February 1, 1914, to July 31, the sand was handled by a locomotive crane and one of the cantilever berm cranes formerly used for mixing and placing concrete in the locks; since August 1, a second locomotive crane has been substituted for the cantilever crane. The old stock pile for the lock construction is used as an auxiliary source of supply.

The output of rock from Ancon crusher has met all demands since the closing of the Porto Bello crusher on April 30, 1912, though there was a temporary shortage of No. 2 rock several months ago, due to extraordinary use of it in the building and landscape work at the new town of Balboa. The present output is about 1,800 cubic yards per day. This is approximately three-fourths of the product from this crusher alone at the height of operations, or about 35 per cent of the rate of production of both the Ancon and Porto Bello plants during the six months from July 1, 1911, to January 1, 1912, for which the total output was 359,025 cubic yards at Ancon, and 439,833 cubic yards at Porto Bello. Of the rock now turned out from the Ancon crusher, approximately 40 per cent is No. 1, and 60 per cent is No. 2. Screenings amount to about 10 per cent of the rock crushed, and are used in roadwork and building construction.

Cement is now received at the rate of approximately 2,600 barrels, or 10,400 bags, a day, as compared with a former consumption of about 6,000 barrels daily. Present deliveries are being made entirely on the *Ancon* and *Cristobal* of the Panama Railroad Steamship Line, though the *Colon* brought 5,000 barrels on July 3. The last shipments in chartered vessels were received on September 13, 1913, and March 27, 1914.

Chagres River gravel is being reclaimed at the rate of about 1,500 cubic yards a day. It is excavated by a ladder dredge, now working a little above the former village of Cruces, and handled to the unloading wharf at Gamboa in clapsnets. The tender *De Lesseps*, formerly towing barges in this service, was returned to Culebra Cut in April, as it was not

strong enough to handle the barges against the currents which prevail during the rainy season. The gravel is unloaded by a cantilever crane, formerly at Balboa in the sand service, with a capacity of 250 cubic yards per hour. The work of this crane is supplemented by a locomotive crane equipped with a clamshell bucket. Prior to the beginning of the dredging service, gravel was reclaimed by a maximum of two locomotive cranes, equipped with $\frac{3}{4}$ -cubic yard buckets. One of these, operated by the Panama railroad, made a high daily record for such equipment by excavating 1,203 cubic yards on February 21, 1913. Authority has been granted for transfer of another of the sand unloading cranes at Balboa to Gamboa, to furnish additional facilities for handling the gravel.

The requirements of sand, gravel, and crushed rock during the six months from June to November, 1914, inclusive, have been estimated, as follows:

MONTH.	Sand.	Gravel.	Ancon rock.	
			No. 1	No. 2
June.....	25,024	22,052	17,060	24,609
July.....	21,780	24,608	11,660	23,804
August.....	18,270	25,608	8,460	22,539
September.....	21,820	24,608	12,560	15,073
October.....	21,675	24,408	12,560	14,029
November.....	20,875	24,908	12,560	13,029
Total.....	129,444	146,192	74,850	113,083

It will be seen from the above tabulation that the use of sand and crushed rock is decreasing, while the demand for gravel remains practically constant. The distribution of the six months' demand among the various divisions is shown below:

DIVISION.	Sand.	Gravel.	Ancon rock.	
			No. 1	No. 2
Municipal Eng..	12,725	5,642	7,500	30,981
Dredging.....	150	110
Mechanical.....	1,200
Terminal Con....	55,800	63,300	39,700	36,000
Supply Dept....	41,000	150	41,000
Fortifications..	18,005	22,500	4,880
Panama railroad	564	89,100	1,500	222

Included with the quantities for the Division of Municipal Engineering are the quantities required for the work under the former Division of Erection, principally in the completion of lock machinery installation and the installation of electrical equipment. The Division of Terminal Construction will use also 3,250 cubic yards of rock screenings, and, in addition, 15,000 cubic yards extra of gravel will be kept subject to its order.

Obituary.

The death of John Crittenden Warren, local agent of the Panama Railroad Company at Colon, occurred at Atlanta, Ga., on July 21. He had been in ill health for some time, and was granted a leave of absence on June 18. In point of service, he was one of the oldest employees of the railroad company, having first entered its employ, as a conductor, on September 10, 1887, under the late Col. A. L. Rives, then its superintendent. He was appointed general ticket agent on October 14, 1888, and later, in addition to his other duties, was placed in charge of the baggage and local express business of the company. On January 18, 1890, the positions of general ticket and baggage agent and master of trains were consolidated, and, in addition to performing these duties, he served as acting general superintendent at different times between November 26, 1890 and November 27, 1895, in all about 24 months. On November 14, 1895, he was promoted to assistant general superintendent and master of trains, which position he filled

until April 11, 1900, when he resigned and went to Atlanta, Ga. In July, 1905, he returned to the Isthmus and reentered the railroad's employ as claim clerk; the following year he was made cashier of the local agency at Colon; in 1909, he was appointed clerk in charge of the Colon agency, and in 1913, was promoted to local agent. He was born at Edenton, N. C., April 13, 1845, and entered the University of Virginia in 1861, but left the institution later in the year on account of the war, and enlisted as a private soldier in Company C, Fifty-second North Carolina Regiment of the Confederate Army. He was promoted to sergeant-major, second, and first lieutenants, successively. He was wounded five times at the battle of Gettysburg, and was taken prisoner, remaining in the Federal hospitals for about a year. In January, 1865, he was retired from active service on account of his wounds, and was assigned to the Bureau of Conscriptions, where he remained until the war was over. In January, 1866, he entered the service of the Virginia and Tennessee Railroad, now a part of the Norfolk and Western Railroad, at Lynchburg, Va. In June, 1868, he left the service of that company, and entered the employ of the Orange and Alexandria Railroad, now a part of the Southern Railway system, continuing with that company until 1875, when he was appointed agent of the Southern Express Company at Jackson, Tenn., where he remained until he came to the Isthmus. He is survived by his wife, Mrs. Kate P. Warren, residing at No. 109 Hunter street, Atlanta, Ga., and by a daughter, Mrs. Patty W. Darby, No. 29 Avery Drive, Ansley Park, Atlanta.

James H. Roake, an American employed as a plumber in the permanent building division, died at Ancon hospital on Monday, August 3, at 7.30 a. m. He was born at Puskville, N. Y., was 35 years of age, and married. He entered the Canal Service on March 20, 1914. He is survived by his wife, Mrs. Margaret Roake, and three sons, living at No. 14 East Twenty-eighth street, Bayonne, N. J.

Word has been received of the death, at Brooklyn, N. Y., of James Wilson, a shipfitter, who was in the Canal Service from August 17, 1909, to January 13, 1912, first in the old Atlantic Division, and later, in the former Pacific Division. He was 48 years old, and is survived by his wife, a daughter, and three sons, the latter having been former Canal employees. He was a member of Isthmian Canal Lodge, No. 1, Independent Order of Odd Fellows.

The death of Charles E. Rottger, a first-class policeman in the service of the Canal Zone police department, occurred at Bristol, Conn., on July 10. He was born at Hoboken, N. J., was 28 years of age, and unmarried. He entered the Canal Service on January 9, 1913, and was stationed at Empire during the greater part of his residence on the Isthmus. From 1907 to 1910, he served in the 83d Company of the Coast Artillery Corps, with station at Fort Revere, and from 1910 to 1912, served in the 59th Company of the Coast Artillery Corps, with station at Fort Andrews, Boston Harbor. A sister, Mrs. Marie Ohler, resides at No. 140 West street, Bristol, Conn.

EXECUTIVE ORDER.

Rules and Regulations for the Operation and Navigation of the Panama Canal and Approaches Thereto, Including All Waters Under Its Jurisdiction.

GENERAL REGULATIONS.

1. The following rules and regulations, pertaining to the operation and navigation of the Panama Canal, are published for the benefit of all vessels coming within its jurisdiction, and masters of vessels, or their agents, one or both, desiring to use the Canal and terminal ports, or any of the waters, must observe them.

2. Any person violating any of the provisions of the rules and regulations established hereunder shall be deemed guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of five hundred dollars (\$500), or by imprisonment not to exceed six months, or by both such fine and imprisonment, at the discretion of the court.

3. After entering, no vessel shall leave one of the terminal ports for the purpose of passing further into the Canal, until authority in proper form has been given by the captain of the port.

4. The Canal authorities may deny any vessel the privilege of passing through the Canal, the cargo of which is of such a nature that it might, in any way, endanger the locks, wharves, equipment, or any part of the Canal, by being explosive or highly inflammable. The further right is reserved to them to impose such safety regulations as they may see fit upon any such vessel while in Canal waters.

5. Vessels desiring to pass through the Canal, whose cargoes consist of high explosives, should, when practicable, so report and obtain permission from the Canal authorities to use the Canal before leaving their ports of departure.

6. In any case where the condition of the cargo, hull, or machinery is such that it is liable to endanger or obstruct the Canal, permission to pass through may be refused until steps have been taken to remedy the defect.

7. All vessels, having a specially dangerous cargo, such as explosives or oils of any kind, shall fly a red flag by day at the masthead, and hoist a red lantern at night.

8. The following information must be ready for immediate delivery upon the arrival of the ship in port: Name of vessel, nationality, name of master, date and time of arrival, port of departure, date of departure, port of destination, length, draft, beam, registered tonnage, crew and passenger list, and character of cargo; the bill of health should also be ready for presentation.

9. The Canal authorities may dispatch vessels through the Canal in any order and at any time they may see fit; priority of arrival at a terminal does not give any vessel the right to pass through the Canal ahead of another that may arrive later, although this will be a consideration in determining the order of passage.

10. The Canal authorities may hold a vessel for the purpose of investigating any report made against her by the proper persons, for the violation of the rules of the Canal or the laws of the Canal Zone, or of the United States, or for the investigation or adjustment of any claims or disputes that may arise on either side, but no vessel shall have any claim for damages against the Canal for any delay in consequence thereof.

PILOTS AND MOVEMENTS OF VESSELS.

11. Vessels will not be allowed to enter or depart from terminal ports between sundown and sunrise, without having obtained permission from the proper authorities. This will not be interpreted to mean that a vessel in danger or distress will be prohibited from entering a terminal port at any time in case of necessity or emergency, but such vessel should, when practicable, give due notice in advance, by radio or otherwise, and obtain a pilot if possible; nor shall this be interpreted to prevent a vessel from anchoring just inside of the breakwater in the outer harbor at the Atlantic terminal, or to seaward of the entrance to the dredged channel on the Pacific side, between sundown and sunrise.

12. Except when exempted from the operation of this rule by the Governor of The Panama Canal, no vessel will be allowed to pass through the Canal, enter or leave a terminal port, maneuver, shift berth, go alongside of, or leave any wharf or dock in Canal waters, without having a regularly authorized Government pilot on board.

13. Pilotage for vessels in transit through the Canal will be free, nor will they be charged pilotage for entering or leaving a terminal port when it is for the sole purpose of passing through the Canal, but should any such vessel, while in Canal waters, discharge or receive freight or passengers, or take on board supplies, provisions, stores, or fuel, or remain for the purpose of effecting repairs, or make either terminal a port of call, she may be liable for entrance or departure pilotage, as the Canal authorities may direct.

14. Pilotage in and out of the Atlantic and Pacific terminals of the Canal is compulsory, and all vessels, unless otherwise exempted, will be compelled to take a regular Government pilot upon entering or leaving. The fact that the master or any officer of any vessel holds a pilot's license for any of the waters of the Canal Zone will not authorize the vessel to enter without taking a Government pilot.

15. No person, steamer, company, or corporation will be allowed to maintain or employ pilots in Canal waters for the exclusive use of their own or any other vessels; all pilots, without exception, must be duly authorized and licensed by the Canal authorities and be in the employ of the Canal. This shall not be interpreted to mean that the Canal authorities shall be prohibited from issuing restricted pilot licenses for small craft in Canal waters, or any other that they may see fit.

16. Pilots will meet incoming vessels inside of the breakwaters at the Atlantic terminal; should there be any delay, vessels may anchor just inside of the Atlantic breakwaters or to seaward of the Canal entrance on the Pacific side, make the usual signal for a pilot, and await his arrival. Should a vessel desire a pilot to meet her outside of the Atlantic breakwaters, she should remain there and make signal to this effect.

17. Whenever practicable, vessels should send notification of the probable time of their arrival, by radio or otherwise, so that pilots may meet them promptly.

18. All vessels entering port must take the berths or docks assigned them by the captain of the port, and they will not be allowed to shift berths or moorings without the proper permission.

19. Except in the prescribed limits in Gatun Lake and adjacent waters, no vessel will be allowed to anchor in any part of the Canal,

nor on any of the marked ranges; should an emergency arise wherein it may be necessary to let go an anchor, whenever practicable, the pilot should be consulted before doing so.

20. At all times when a vessel is under way in the terminal ports or in transit through the Canal, except while passing through the locks, with a duly accredited pilot on board, the captain or master of a vessel will be held solely responsible for the safety, handling, and proper navigation of the vessel; the pilot is to be considered as being on board solely in an advisory capacity, but masters of vessels must abide by the rules and regulations of the Canal, as interpreted to them by the pilots.

21. The pilot shall be freely consulted at all times to insure safety in navigation, and that no accident or damage result from ignorance on the part of the master or officers of the vessel in transit; and should any such master, officer, or person connected with the ship, give or cause to be given any order, or direct any change of speed or direction of the ship on his own initiative without the knowledge of the pilot, which may result in damage to his own or any other vessel, dredger, or property of any kind, or endanger or block the Canal, or any of its equipment, he will be held strictly responsible, and the vessel itself may be held by legal process until settlement in full shall have been made to cover any loss or damage that may have resulted in consequence thereof.

22. Inasmuch as every vessel has its own individual peculiarities in handling, answering her helm, variation in headway due to speed, it shall be the duty of the master of the vessel, or his qualified representative, to be present at all times on the bridge of the ship to keep the pilot informed in regard to these matters, so that the pilot may be best qualified to give advice in regard to navigating the ship safely.

23. The pilot should not only be freely consulted at all times on matters relating to the navigation of the ship, but to the rules and regulations pertaining to the same, to signals, locks, weather, or other matters of importance relating to the movements of the vessel. While on board, he is the properly qualified representative of the Canal authorities in these matters, and should any accident or damage result from failure to consult him, or from not following his advice, the vessel shall be held responsible for such accident or damage.

24. The pilot must inform the master or captain that his (the pilot's) experience and knowledge of the Canal is at his (the master's or captain's) disposal and that, inasmuch as he (the pilot) is not in a position to know the defects, difficulties, or eccentricities of the vessel in maneuvering, while getting under way, or in transit, the responsibility for navigating the vessel is entirely in the hands of the master or captain, except when passing through the locks.

25. When in the opinion of the pilot, the master or captain, or their representatives, shall fail to follow his advice and thereby endanger his own or any other vessel, or any part of the Canal or its equipment, the pilot shall then direct the master or captain of such vessel to stop, anchor, or moor, until the facts have been laid before the Canal authorities.

26. Pilots shall conform to such other rules as shall be prescribed for their guidance by the Governor of The Panama Canal.

PREPARATION FOR AND TRANSIT THROUGH THE CANAL.

27. Vessels shall, at all times, when under way in Canal waters, when passing through

the locks, or moored temporarily in transit through the Canal, keep a full watch on deck and in the engine room, in the same manner in which they are kept at sea.

28. While a vessel is under way in Canal waters, no one shall be allowed on the bridge or in the pilot house, except the pilot and other representatives of the Canal, the master, and such officers and crew of the ship as may be necessary for her management, direction, and safety. Under no condition will any passenger or any other unauthorized person be allowed on the bridge or in the pilot house.

29. Before beginning the passage of the Canal vessels will be required to have hawsers, lines, and fenders ready for passing through the locks, for warping, towing, or mooring as the case may be; and will have both anchors ready for letting go. During the passage, at all times while the vessel is under way or moored against the lock walls, her deck winches, capstans, or other power for handling lines, as well as her mooring bits, deck chocks, cleats, hawsepipes, etc., shall be ready for handling ship to the exclusion of all other work.

30. At least one boat for handling lines shall be kept ready for lowering.

31. Should any part of a vessel's engines, machinery, condensers, boilers, shafts, propellers, steering gear, valves, hull, equipment, or anything else be in such condition that it might, through failure, interfere to prevent or retard a vessel's passage through the Canal, such fact must be presented to the captain of the port before a vessel will be allowed to enter.

32. All sailing craft, vessels whose machinery may be in bad condition or disabled, and vessels without motive power, must be towed through all parts of the Canal lying between the entrances, for which service an additional charge will be imposed.

33. When passing through the locks, vessels will habitually be towed by Canal equipment. In exceptional instances, as when such equipment is not available, or in case of very small vessels, special permission to use the vessel's own motive power may be given by the Governor. Without such special permission, the vessel's motive power will not be used while passing the locks.

34. Upon approaching the lock, vessels will moor against the middle approach wall with the bow at least 50 feet from the nearest fender chain. They will then be taken in charge by the lock force and made ready for passage through the locks.

35. When these regulations are complied with in all respects, responsibility for handling vessels through the locks will rest with the Canal operating force, but the crew and officers will be required to render such assistance as may be necessary to supplement the lock force. To assist in insuring safety of passage, the lock force will take complete supervision of the engine room, even to the extent of sealing the engines if the Governor shall so direct.

36. The Governor of The Panama Canal is hereby authorized to issue, from time to time, orders regulating the procedure in passing vessels through the locks, and the details of the supervision which will be exercised by the lock force. Such orders, when issued, shall have the force of these regulations.

37. In cases where special permission to use the vessel's own motive power has been given by the Governor, he shall indicate what precautions must be taken to insure safety in passing through the locks. His directions as to

such precautions must be observed strictly and in every detail.

38. Vessels will be liable for any damage to Canal structures or equipment while passing through the locks, caused through disregard or noncompliance of these rules and regulations or any orders which may be issued by the Governor to regulate such passage. The Panama Canal will not be held liable for any damage to the vessel occasioned by such disregard or noncompliance.

39. Masters of vessels will not allow any one to take passage on their ships while passing through the Canal, except the ship's officers, crew, and duly accredited passengers, and such officials and other persons as may be designated by the Canal authorities.

RADIO COMMUNICATION AND REPORT.

40. As soon as radio communication can be established with the Canal, vessels should report their names, nationality, length, draft, tonnage, whether or not they desire to pass through the Canal, require coal, provisions, supplies, repairs, to go alongside of a wharf, the use of tugs, probable time of arrival, length of stay in port, or any other matters of importance or interest. If this information has been previously communicated, through agents or otherwise, to the captain of the port, it will not be necessary to report by radio, but the probable time of arrival should always be sent.

41. Control of radio communication is entirely in the hands of the radio shore stations. No vessel will be allowed to interfere in the slightest degree with the Canal radio stations; upon an order being received by a vessel at any time while within the waters under the control of the Canal, to discontinue using radio, even if in the midst of transmission of a message, she shall immediately comply.

42. Upon a ship's arriving within the 15-mile limit, and until leaving the 15-mile limit of the Canal Zone, she shall transmit only with low power, not exceeding $\frac{1}{2}$ -kilowatt.

43. Messages to stations will be sent only to Colon station (NAX) when in Gatun Locks and to northward thereof, and only to Balboa station (NPJ) when in Miraflores Locks and to southward thereof; between these two points, ships may work to either station, preferably to the nearer one; the high power station, (Darien) at Darien, will not handle commercial work and will not be called for Canal business, except in case of emergency.

44. All messages between ships in the Canal Zone and ships at sea must be forwarded through the nearer shore station.

45. Messages from ships in the Caribbean Sea for ships in the Pacific waters, or *vice versa*, shall be routed through the Canal Zone shore stations.

46. All vessels fitted with radio, after leaving the terminal harbor to pass through the Canal, shall keep an operator on watch until the further terminal harbor has been reached; this applies to the time when they are anchored in Gatun Lake, while passing through the locks, or moored to the lock walls, or to any of the wharves in the Canal proper, as well as when they are under way. Messages relating to the ship's movements and the Canal business shall take precedence over all commercial messages.

47. Pilots on vessels passing through the Canal shall have the right to use a vessel's radio freely for the transaction of the Canal business.

48. Under the direction of the pilots, vessels will, from time to time, report their prog-

ress through the Canal; accidents to machinery, propellers, steering gear, equipment, or anything else that may delay them or require assistance; any sickness or casualties that require medical attendance from Canal officials; or any other matters of importance that may arise.

49. No charges will be imposed against the Canal by vessels receiving or sending messages in relation to Canal business.

50. No vessel will be allowed to communicate with any lock or signal station while in transit through the Canal, except through the pilot; all messages of any kind must be sent through him. This does not apply to vessels moored at the terminals at Cristobal or Balboa, before entering, or after having passed through the Canal, which may wish to communicate through the terminal stations.

51. Vessels in transit through the Canal can communicate with the locks and signal stations, through the pilots, both by the international code and special signals; information on this subject may be obtained from the Governor of The Panama Canal.

ACCIDENTS OR DEFECTS.

52. If any defect in any part of a vessel's hull, machinery, steering gear, or equipment be discovered while in transit through the Canal, of such a serious nature that it might interfere with the further passage of the vessel, or be liable to block the Canal, the vessel shall stop and, if practicable, be anchored or moored at the first available place. A full report shall immediately be made to the Superintendent of Transportation, through the captain of the port, stating fully the cause and nature of the trouble, probable delay, and request for assistance if it be necessary.

53. Under any and all circumstances, whenever a vessel is liable to become unmanageable from any weakness, or damage to her machinery, steering gear, or for any other reason, she shall immediately, through the pilot, request the assistance of a tug.

FIREARMS.

54. No firearms of any kind shall be discharged while in transit through the Canal or Canal waters, and every precaution will be taken to prevent this.

SUBSISTENCE OF PILOTS.

55. Pilots and other authorized persons on duty, belonging to the Canal Service, shall be subsisted without charge while on board vessels in transit through the Canal.

MAINTENANCE OF TUGS AND OTHER FLOATING EQUIPMENT.

56. No vessel, company, nor individual will be authorized to maintain or operate permanently any tugs, launches, lighters, or floating equipment of any kind within the Canal waters without permission from the Governor; nor shall any small craft or boat of any kind be operated without the proper authority from him.

CLAIMS.

57. All claims for damages arising from injury to vessels, cargo, or passengers from the passing of vessels through the locks under the control of those operating them in accordance with the rules and regulations governing the operation of the Panama Canal, shall be adjusted by mutual agreement, when practicable, between The Panama Canal and the passengers, owners, agents, or underwriters of the vessel, or owners, agents, or underwriters of the cargo of the vessel, as the respective interests may appear.

58. To facilitate the adjustment of such

claims, the Board of Local Inspectors, together with an officer or employe detailed from the Accounting Department to assist the board, shall immediately proceed to investigate and report upon all accidents to vessels in the locks, which may result in claims for damages against The Panama Canal under the provisions of Section 5 of the Panama Canal Act.

59. The Board of Local Inspectors or any member thereof, acting for the board, shall have authority to summon witnesses and administer oaths to such witnesses at any hearing held by such board, and the attendance of witnesses may be compelled by process of court on application of the board to the District Judge.

60. The findings of the board shall be expressed in writing and reported to the Governor, and a certified copy thereof immediately sent to the Auditor. If the finding of the board is against The Panama Canal, the Auditor may proceed at once to effect a settlement with the claimants, if practicable, but such settlement shall be subject to the approval of the Governor. When the settlement is effected, immediate payment of the claim shall be made, if there is an appropriation available for such purpose. In case of disagreement, suit may be brought by the claimant in the District Court of the Canal Zone, against the Governor of The Panama Canal, in conformity with Section 5 of the Panama Canal Act.

61. The Governor of The Panama Canal is authorized to issue such detailed rules, not inconsistent with this order, governing the duties of the board and the adjustment of claims.

MEASUREMENT OF VESSELS.

62. The rules for the measurement of vessels, to determine their tonnage, will be found in the Proclamation of the President, dated November 21, 1913.

AIDS TO NAVIGATION.

63. In general, the channels of the Canal, except Culebra Cut, are marked by double ranges, which are set a little to the starboard side of the channel, so that no matter in which direction a vessel may be going, there will be a range available ahead.

64. The sides of the channels are marked by red and black buoys, in accordance with the system in vogue in the United States, with the red buoys on the starboard hand on entering from seaward, and the black buoys on the port. The lock at Pedro Miguel is the dividing line between the Atlantic and Pacific systems; that is to say, that after passing through the lock, red and black buoys will be found on the opposite sides of the channels to those on which they were before reaching the lock.

65. All lighted ranges show flashing or intermittent white lights; the red lighted buoys show flashing or intermittent red lights; the black lighted buoys show flashing or intermittent white lights, beacons show red or white flashing or intermittent lights, depending upon the side of the channel upon which they are situated. Further information in regard to the navigation of the Canal can be obtained upon application to the Superintendent of Transportation, or the captains of the ports.

RULES OF THE ROAD, WHISTLE AND OTHER SIGNALS, AND SPEED REGULATIONS RELATING TO THE NAVIGATION OF THE CANAL AND APPROACHES THERETO.

66. In the following rules, every steam vessel which is under sail and not under steam, is considered a sailing vessel; and every vessel under her own motive power, whether under

sail or not, is to be considered a steam vessel.

67. The words "Steam vessel" and "Steamer" shall include every vessel propelled by machinery.

68. A vessel is under way, within the meaning of these rules, when she is not at anchor, moored, or aground.

69. Risk of collision can, when circumstances permit, be determined by carefully watching the bearings of an approaching vessel by compass, or otherwise; if the courses be converging and the bearing does not appreciably change, such risk should be deemed to exist.

70. A steam vessel shall be provided with an efficient whistle or siren, sounded by steam or some substitute for steam, so placed that the sound may not be intercepted by any obstruction, and a sailing vessel with an efficient fog horn; both shall be supplied with an efficient bell.

71. A sailing vessel of 20 tons gross tonnage, or upward, shall be provided with a similar fog horn and bell.

72. Motor boats shall be divided into classes, as follows, according to the length, which shall be measured from end to end:

Class I—Less than 26 feet.

Class II—Twenty-six feet, or over, but less than 40 feet.

Class III—Forty feet, or over, but less than 65 feet.

73. All motor boats shall be provided with a whistle or other mechanical sound producing device, capable of making a blast of at least two seconds' duration, and, in addition, Classes II and III shall be provided with an efficient fog horn and fog bell, the latter to be at least eight inches across the mouth.

74. A short blast of the whistle shall mean a blast of about one second's duration, and a prolonged blast of the whistle shall mean a blast of from four to six seconds' duration.

75. One short blast of the whistle signifies intention of or assent to steamer first giving the signal to direct course to her own starboard, except when two steamers are approaching each other at right angles or obliquely, when it signifies intention of steamer which is to starboard of the other to hold course and speed.

76. Two short blasts of the whistle signify intention of or assent to steamer first giving the signal to direct course to her own port, except when steamers are approaching each other at right angles or obliquely, when the signal signifies desire of or assent to steamer which is to the port of the other to cross the bow of steamer to starboard.

77. Three short blasts of the whistle shall mean: "My engines are going at full speed astern."

78. When vessels are in sight of one another, a steam vessel under way whose engines are going at full speed astern shall indicate that fact by three short blasts of the whistle.

79. If, when vessels are approaching each other, either vessel fails to understand the course or intention of the other, from any cause, the vessel so in doubt shall immediately signify the same by making the danger signal, namely, several short and rapid blasts, not less than four, on the steam whistle.

80. Whenever the danger signal is given, engines of both steamers shall be stopped and backed until the headway of the steamers has been fully checked, nor shall the engines of either steamer be again started ahead until the steamers can safely pass each other, and

the proper signals for passing have been given, answered, and understood.

81. Steam vessels are forbidden to use what has become technically known among pilots as "Cross signals;" that is, answering one whistle with two, and answering two whistles with one. In all cases, and under all circumstances, a pilot receiving either of the whistle signals provided in these rules, which for any reason he deems injudicious to comply with, instead of answering it with a cross signal, shall at once sound the danger signal and observe the rule applying thereto.

82. The signals for passing, by blowing the whistle, shall be given and answered by vessels, in compliance with these rules, not only when meeting head on, or nearly so, but at all times when the vessels are in sight of each other, when passing or meeting at a distance within a half mile of each other, and whether passing to starboard or port.

83. The whistle signals provided in the rules for steam vessels meeting, passing, or overtaking, are never to be used, except when steamers are in sight of each other, and the course and position of each can be determined in the daytime by a sight of the vessel itself, or at night by seeing its signal lights, except in cases hereafter mentioned, where vessels are approaching a turn in the Canal. In fog, mist, or heavy rainstorms, when vessels cannot see each other, fog signals only must be given.

84. When steam vessels are approaching each other head on, or nearly so, it shall be the duty of each to pass on the port side of the other; and either vessel shall give, as a signal of her intention, one short and distinct blast of her whistle, and thereupon they shall pass upon the port side of each other. But if their courses be so far to starboard of each other as not to be considered as meeting head on, either vessel shall immediately give two short, distinct blasts of her whistle, which the other vessel shall answer promptly with two similar blasts, and they shall pass to starboard of each other; but vessels going in opposite directions, in transit through the Canal, shall make it an invariable rule to pass to port of each other, unless there be some special reason to the contrary.

85. When they sight each other in the straight reaches of the Canal, going in opposite directions, they shall, when within a mile of each other, be slowed down and each placed upon its respective range, which is marked by the two light towers to the starboard side of the middle line, and should not be allowed to approach closer than this to the center line until they have passed each other; this will obviate any risk of collision and prevent a vessel from approaching too close to the sides of the Canal.

86. Selfpropelling Canal craft, at work on their stations or under way, will give way and leave the center of the channels clear to seagoing vessels in transit; nothing in this rule shall be construed to warrant a violation of the rules of the road, but shall be interpreted to mean that tugs, launches, and small selfpropelling craft shall keep close to the sides of the Canal and out of midchannel when large vessels are passing, whenever practicable, without involving any danger to themselves.

87. The foregoing applies only to cases where vessels are meeting end on, or nearly so, in such manner as to involve risk of collision; in other words, to cases in which, by day, each vessel can see the masts of the other in a line, or nearly so, with her own, and at

night, to cases in which each vessel can see the other's side lights, and each can see the range lights of the other in line, or nearly so. It does not apply to cases in which a vessel can see another ahead crossing her own course, or by night, to cases where the red light of one vessel is opposed to the red light of the other, or where the green light of one vessel is opposed to the green light of the other, or where a red light without a green light, or a green light without a red light, is seen ahead, or where both green and red lights are seen anywhere but ahead.

88. Vessels approaching the sharper bends in the Canal, particularly when the next reach may be obscured, and all bends in Culebra Cut, shall, when at a distance of at least half a mile from such bend, slow down and blow one prolonged blast as a notification to other vessels which may be coming from the opposite direction; if there be no reply, the vessel may proceed, but vessels shall not pass each other in the bends of the Canal; if there be a reply to the blast first sounded, both vessels shall stop and proceed cautiously, following the rules of the road, but the vessel which has the turn of the bend on her port bow shall have the right to first proceed and make the turn.

89. When steam vessels are moved from their docks, or berths, and other vessels are liable to pass from any direction toward them, they shall sound a prolonged blast, but immediately after clearing their berths, so as to be fully in sight, they shall be governed by the steering and sailing rules.

90. A prolonged blast shall also be sounded when approaching all signal stations or locks, and when leaving the latter.

91. When steam vessels are running in the same direction, and the vessel astern desires to pass on the starboard hand of the vessel ahead, she shall give one short blast, and if the vessel ahead answers with one blast, they shall maneuver accordingly, but if the vessel ahead does not think it safe for the vessel astern to attempt to pass at that point, she shall immediately signify the same by giving several short and rapid blasts of the whistle, not less than four, and under no circumstances shall the vessel astern attempt to pass the vessel ahead until such time as they have reached a point where it can be safely done, when the vessel ahead shall signify her willingness by blowing the proper signals; the vessel ahead shall in no case attempt to cross the bow or crowd upon the course of the passing vessel.

92. Every vessel coming up with another vessel from any direction more than two points abaft her beam; that is, in such a position with reference to the vessel which she is overtaking that at night she would be unable to see either of the vessel's side lights, shall be deemed to be an overtaking vessel, and no subsequent alteration of the bearing between the two vessels shall make the overtaking vessel a crossing vessel within the meaning of these rules, or relieve her of the duty of keeping clear of the overtaken vessel, until she is finally passed and clear. As by day the overtaking vessel cannot always know with certainty whether she is forward of or abaft this direction from the other vessel, she should, if in doubt, assume that she is an overtaking vessel and keep out of the way.

93. After whistle signals have been made and answered, Canal craft must haul close out to the sides of the Canal and leave the

center of the channels unrestricted for seagoing vessels; this applies particularly to the 500-foot channels and the Culebra Cut.

94. Unless specially authorized by the Governor, no owner, master, or operator of floating craft, except such as may belong to or be chartered by The Panama Canal, or such as may be engaged in passage of the Canal under charge of a Government pilot, shall cause or permit such craft to enter, navigate, or be present within that portion of the Panama Canal, known as the Culebra Cut, which lies between Gamboa and the Pedro Miguel Lock.

95. For the better enforcement of this regulation, the officers and agents of the Canal, and the assistant engineers, superintendents, and supervisors employed under them by the authority of the Governor, shall have power and authority to arrest and take into custody, with or without process, any person or persons who may violate this rule.

96. Speed exceeding six knots per hour is prohibited in the Cut; large vessels, particularly when approaching a turn, shall go at the slowest speed that will enable them to keep their steerage way. This rule does not apply to vessels owned by the Canal.

97. The movement of vessels in Culebra Cut will be regulated by orders to be issued by the Governor, which orders will be communicated to the masters of vessels by the pilots.

98. The Canal authorities may require any vessel to take a tug through the Cut, on approaching the locks, or in any other part of the Canal, when, in their opinion, it may be necessary to insure the safety of the vessel or to prevent accident or grounding.

99. Should a vessel be unwieldy, steer badly, or be hard to handle, the captain or master should so report and request the services of a tug to assist him through the Cut, should he deem it necessary.

100. On approaching another vessel under way in the narrow reaches, or before passing a vessel that has been tied up, or lighters, scows, dredgers, piledrivers, or anything that is afloat, whether moored, anchored, or under way, vessels shall blow a prolonged blast and slow down in plenty of time to pass at the slowest speed at which they can be steered.

101. The following speeds shall not be exceeded by vessels in transit through the Canal:

	Knots per hour.
Colon to Gatun Locks.....	6
Gatun Lake, in the 1,000-foot channels.....	15
Gatun Lake, in the 800-foot channels.....	12
Gatun Lake, in the 500-foot channels.....	10
Culebra Cut.....	6
Miraflores Lake.....	6
Miraflores Locks to Pacific entrance to Canal.	6
Steamers entering or leaving a port.....	6

102. The Governor may change the rules in regard to speed and the use of tugs at any time that he may see fit, but will give due notice in case any changes be made.

103. Under no condition will steamers be allowed to run side by side in any part of the Canal proper, terminal ports, or adjacent waters, both going in the same direction, except for the time necessary for one steamer to pass ahead of another, after the proper signals have been made and answered; nor shall such passing take place in any of the bends of the Canal; should an occasion arise, however, where steamers may find themselves running side by side, or nearly so, in the same direction, in the open waters, or elsewhere, the steamer on the right or starboard side shall have the right-of-way, and the steamer on the left or

port side shall check her way, drop astern, and keep at a safe distance until the bend shall have been passed or there is no further danger of collision.

104. When two steamers are approaching each other at right angles, or obliquely, so as to involve risk of collision, other than when one steamer is overtaking another, the steamer which has the other on her port side shall hold her course and speed; and the steamer which has the other on her starboard side shall keep out of the way of the other, by directing her course to starboard, so as to cross the stern of the other steamer, or, if necessary to do so, slacken her speed, or stop, or reverse. The steamer having the other on her own port bow shall blow one blast of her whistle as a signal of her intention to cross the bow of the other, holding her course and speed, which signal shall be promptly answered by the other steamer by one short blast of her whistle as a signal of her intention to direct her course to starboard, so as to cross the stern of the other steamer or otherwise keep clear.

105. If, from any cause whatever, the conditions covered by this situation are such as to prevent immediate compliance with each other's signals, the misunderstanding or objection shall at once be made apparent by blowing the danger signal, and both steamers shall be stopped and backed, if necessary, until signals for passing with safety are made and understood.

106. Every vessel which is directed by these rules to keep out of the way of another vessel, shall, if the circumstances of the case permit, avoid crossing ahead of the other.

107. Every vessel which is directed by these rules to keep out of the way of another vessel, shall, on approaching her, if necessary, slacken her speed, or stop, or reverse.

108. When a steam vessel and a sailing vessel are proceeding in such directions that they may involve the risk of collision, the steam vessel shall keep out of the way of the sailing vessel.

109. When two sailing vessels are approaching one another, so as to involve risk of collision, one of them shall keep out of the way of the other, as follows:

(a) A vessel which is running free shall keep out of the way of a vessel which is close-hauled.

(b) A vessel which is close-hauled on the port tack shall keep out of the way of a vessel which is close-hauled on the starboard tack.

(c) When both are running free, with the wind on different sides, the vessel which has the wind on the port side shall keep out of the way of the other.

(d) When both are running free, with the wind on the same side, the vessel which is to the windward shall keep out of the way of the vessel which is to the leeward.

(e) A vessel which has the wind aft shall keep out of the way of the other vessel.

110. Where, by any of these rules, one of two vessels is to keep out of the way, the other shall keep her course and speed.

111. Notwithstanding anything contained in these rules, every vessel overtaking another shall keep out of the way of the overtaken vessel.

112. Sailing vessels under way shall keep out of the way of sailing vessels or boats fishing with nets, or lines, or trawls. This rule shall not give to any vessel or boat engaged in fishing the right of obstructing a fairway used by vessels other than fishing vessels or boats.

113. Nothing in these rules shall exonerate any vessel, or the owner or master or crew thereof, from all the consequences of any neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

114. In obeying and construing these rules, due regard shall be had to all dangers of navigation and collision, and to any special circumstances which may render a departure from the above rules necessary, in order to avoid immediate danger.

115. In fog, mist, or heavy rainstorms, whether by day or night, signals shall be given, as follows:

(a) A steam vessel under way, except when towing other vessels or being towed, shall sound, at intervals of not more than one minute, on the whistle or siren, a prolonged blast.

(b) A vessel when towing other vessels shall sound, at intervals of not more than one minute, on the whistle or siren, three blasts in succession, namely, one prolonged blast followed by two short blasts.

(c) Seagoing dredges, when dredging in a fog, shall give four blasts in succession: one prolonged blast followed by three short blasts.

(d) A vessel towed may give, at intervals of not more than one minute, on the fog horn, a signal of three blasts in succession, namely, one prolonged blast followed by two short blasts, and she shall not give any other.

(e) A sailing vessel under way shall sound, at intervals of not more than one minute, when on the starboard tack one blast, when on the port tack, two blasts in succession, and when the wind is abaft the beam, three blasts in succession.

(f) All rafts or other water craft, not herein provided for, navigated by hand power, horsepower, or by the current of the river, shall sound a blast on the fog horn, or equivalent signal, at intervals of not more than one minute.

(g) A vessel at anchor shall, at intervals of not more than one minute, ring the bell rapidly for about five seconds.

116. Every vessel shall, in fog, mist, or heavy rainstorm, go at a moderate speed, slow down, or stop, having due regard to the existing circumstances and conditions.

117. A steam vessel hearing, apparently forward of her beam, the fog signal of a vessel the position of which is not ascertained, shall, as far as the circumstances of the case admit, stop her engines, and then navigate with caution until the danger is over.

118. In thick and foggy weather, vessels will not be allowed to enter the Canal or leave the locks or mooring station, until the weather has cleared. Vessels in transit, when overtaken by thick or foggy weather, must immediately take every precaution and make preparation to anchor or moor at the first available place, and so remain until the weather clears. Vessels equipped with radio, when overtaken by thick or foggy weather, should immediately so report, in order that the proper fog signal may be made at the mooring stations on the approach of such vessels.

119. In order further to assure safe navigation in thick or foggy weather, masters of vessels shall have prepared accurate tables showing their compass error, before they will be allowed to enter the Canal. The general direction of the Canal and its reaches is southeasterly and northwesterly, and it would be well, if an opportunity offers, for vessels to obtain an accurate deviation table on these

courses, while in the approximate latitude and vicinity of the Canal.

120. Upon the first approach of thick weather of any kind, the position of the ship must be accurately checked and the closest possible reckoning be kept until the weather clears, or she shall have been moored or anchored.

121. Unnecessary sounding of the steam whistle, except as a danger signal, or in case of fire or emergency, is prohibited within the waters of the Canal Zone, and any licensed officer in charge of a steamer who authorizes or permits such unnecessary whistling shall, upon conviction thereof before the Board of Local Inspectors having jurisdiction, be suspended from acting under his license, if the inspectors trying the case so decide.

122. The word "Visible" in these rules, when applied to lights, shall mean visible on a dark night with a clear atmosphere.

123. The rules concerning lights shall be complied with in all weathers from sunset to sunrise, and during such time no other lights which may be mistaken for the prescribed lights shall be exhibited.

124. A steam vessel when under way shall carry:

(a) On or in front of the foremast, or, if a vessel without a foremast, then in the fore part of the vessel, a bright white light so constructed as to show an unbroken light over an arc of the horizon of 20 points of the compass, so fixed as to throw the light 10 points on each side of the vessel, namely, from right ahead to two points abaft the beam on the starboard side, and of such a character as to be visible at a distance of at least five miles.

(b) On the starboard side, a green light so constructed as to show an unbroken light over an arc of the horizon of 10 points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the starboard side, and of such a character as to be visible at a distance of at least two miles.

(c) On the port side, a red light so constructed as to show an unbroken light over an arc of the horizon of 10 points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the port side, and of such a character as to be visible at a distance of at least two miles.

(d) The said green and red side lights shall be fitted with inboard screens projecting at least three feet forward from the light, so as to prevent these lights from being seen across the bow.

(e) A seagoing steam vessel shall carry an additional white light similar in construction to the light mentioned in subdivision (a). These two lights shall be so placed in line with the keel that one shall be at least 15 feet higher than the other, and in such a position with reference to each other that the lower light shall be forward of the upper one. The vertical distance of these lights shall be less than the horizontal distance.

125. A steam vessel, when towing another vessel shall, in addition to her side lights, carry two white bright lights in a vertical line, one over the other, not less than three feet apart, and when towing more than one vessel, shall carry an additional bright white light three feet above or below such lights, if the length of the tow measuring from the stern of the towing vessel to the stern of the last vessel towed exceeds 600 feet. Each of the lights shall be of the same construction and character, and shall be carried in the same position

as the white light (a), previously mentioned for steamers.

126. Such steam vessel may carry a small white light abaft the funnel, aftermast, or at the stern, for the vessel towed to steer by, but such light shall not be visible forward of the beam.

127. A sailing vessel under way or being towed shall carry the same lights (b) and (c) as are prescribed for a steam vessel under way, with the exception of the white lights mentioned, which they shall never carry.

128. Whenever, as in the case of vessels of less than 10 gross tons under way during bad weather, the green and red side lights cannot be fixed, these lights shall be kept at hand lighted and ready for use, and shall, on the approach of or to other vessels, be exhibited on their respective sides in sufficient time to prevent collision, in such manner as to make them most visible, and so that the green light shall not be seen on the port side, nor the red light on the starboard side, nor, if practicable, more than two points abaft the beam on their respective sides. To make the use of these portable lights more certain and easy, the lanterns containing them should each be painted outside with the color of the light when they respectively contain, and shall be provided with proper screens.

129. Pilot vessels, when engaged on their station on pilotage duty, shall not show the lights required for other vessels, but shall carry a white light at the masthead, visible all around the horizon, and shall also exhibit a flare-up light or flare-up lights at short intervals, which shall never exceed 15 minutes.

130. A steam pilot vessel, when engaged on pilotage duty and not at anchor, shall, in addition to the lights required for all pilot vessels carry at a distance of eight feet below her white masthead light, a red light visible all around the horizon and of such a character as to be visible on a dark night with a clear atmosphere at a distance of at least two miles, and also the colored side lights required to be carried by vessels when under way.

131. When engaged on her station on pilotage duty and at anchor, she shall carry, in addition to the lights required for all pilot boats, the red light abovementioned, but not the colored side lights.

132. Fishing vessels less than 10 gross tons, when under way, and not having their nets, dredges, or lines in the water, shall carry the usual white light eight feet above the deck and shall have ready at hand a lantern with a green glass on one side and a red glass on the other side, and on approaching or being approached by another vessel, such lantern shall be exhibited in sufficient time to prevent collision, so that the green light shall not be seen on the port side, nor the red light on the starboard side.

133. All fishing vessels and fishing boats of 10 gross tons or upward, when under way and not having their nets, trawls, dredges, or lines in the water, shall carry and show the same lights as other vessels under way.

134. All vessels, when trawling, dredging, or fishing with any kind of dragnets or lines, shall exhibit, from some part of the vessel where they can be best seen, two lights. One of these lights shall be red, and the other shall be white. The red light shall be above the white light, and shall be at a vertical distance from it of not less than six feet and not more than 12 feet; and the horizontal distance between them, if any, shall not be

more than 10 feet. These two lights shall be of such a character and contained in lanterns of such construction as to be visible all around the horizon, the white light at a distance not less than three miles, and the red light not less than two miles.

135. A vessel which is being overtaken by another shall show from her stern to such last-mentioned vessel a white light or a flare-up light.

136. A vessel under 150 feet in length, when at anchor, shall carry forward, where it can best be seen, but at a height not exceeding 20 feet above the hull, a white light, in a lantern constructed, so as to show a clear, uniform, and unbroken light visible all around the horizon at a distance of at least one mile.

137. A vessel of 150 feet or upward in length, when at anchor, shall carry in the forward part of the vessel, at a height of not less than 20 feet and not exceeding 40 feet above the hull, one such light, and at or near the stern of the vessel, and at such a height that it shall not be less than 15 feet lower than the forward light, another such light.

138. The length of the vessel shall be deemed to be the length appearing in her certificate of registry.

139. Every vessel may, if necessary, in order to attract attention, in addition to the lights which she is by these rules required to carry, use a flare-up light or use any detonating signal that cannot be mistaken for a distress signal.

140. Every barge, lighter, Canal boat, or scow, that is moored alongside of any ship or another barge, or to the side of the Canal, or to any wharf, or lying at anchor on the navigable waters of the Canal Zone, shall show, between the hours of sunset and sunrise, a white light on the bow and stern, at least three feet above the deck of said vessel, and not less than eight feet from the bow and stern thereof.

141. Nothing in these rules shall interfere with the operation of any special rules made by the Government of any nation with respect to additional station and signal lights for two or more ships of war, or for vessels sailing under convoy, or with the exhibition of recognition signals adopted by shipowners, which have been authorized by their respective Governments, and duly registered and published, unless specific instructions are given by the Canal authorities to discontinue the use of such lights while in transit through the Canal.

142. A steam vessel proceeding under sail only, but having her funnel up, may carry in daytime, forward, where it can best be seen, one black ball, or shape, two feet in diameter.

143. Seagoing suction dredges, when under way and dredging, shall carry, beside the lights prescribed for steamers under way, between the two masts where they can best be seen, two red lights, approximately the same height as the masthead light of a steamer, in a vertical line one over the other, not less than six feet apart, and of such a character as to be visible all around the horizon at a distance of at least two miles; and they shall, by day, carry between the two masts, where they can best be seen, in a vertical line, one over the other, not less than six feet apart, two black balls, or shapes, each two feet in diameter.

144. Seagoing suction dredges, when dredging is stopped and the dredge is proceeding either to or from her dumping ground, either loaded or light, shall, at night, extinguish the two red lights and, by day, lower the black balls.

145. Seagoing suction dredges, while actually engaged in dredging, as shown by the black balls or red lights, above, shall have the right-of-way over all other vessels, but in the narrower reaches and the Culebra Cut shall give way to seagoing ships, but when not dredging, as shown by the absence of the black balls or red lights, shall observe all the rules, and have no special privilege.

146. Ferry boats, propelled by machinery and navigating the waters of the Canal Zone, shall carry the range lights and the side lights required by law to be carried on steam vessels.

147. Barges, Canal boats, scows, and lighters being towed astern of steam vessels, when towing singly or what is known as tandem towing, shall each carry a white light on the bow and a white light on the stern.

148. When towed with a hawser two or more abreast, when in one tier, they shall a white light on the bow and a white light on the stern of each of the outside boats; when in more than one tier, each of the outside boats shall carry a white light on its bow; and the outside boats in the last tier shall each carry, in addition, a white light on the outer after part of the stern.

149. Barges, etc., towed alongside a steam vessel, if on the starboard side of said steam vessel, shall display a white light on her own starboard bow, and if on the port side of said steam vessel, shall display a white light on her own port bow; and if there be more than one barge or Canal boat alongside, the white light shall be displayed from the outboard side of the outside barge or Canal boat.

150. When barges, etc., are in tiers and towed at a hawser, there shall be carried on the forward port side of each tier a white light, and on the forward starboard side of the starboard boat in each tier a white light, and on the after port side of the port boat in the stern tier a white light, and on the after starboard side of the starboard tier a white light.

151. Rafts propelled by hand power, or by the current of the river or tide, or which shall be anchored in or near the channel or fairway, or proceeding in tow of a steam vessel, shall carry one white light on each outside corner of the raft, making four lights in all.

152. Row boats and cayucas, whether under oars or sail, shall carry a white light, visible all around the horizon, at an elevation above the surface of the water of at least three feet.

153. The white light required by these rules for rafts and other water craft shall be carried from sunset to sunrise, in a lantern so constructed as to show a clear, uniform, and unbroken light, visible all around the horizon, and of such intensity as to be visible on a dark night with a clear atmosphere at a distance of at least one mile. The light for rafts shall be suspended, so that the lights shall not be less than eight feet above the surface of the water.

154. Any piece of plant, whether dredge, rock breaker, or drill barge, that is operated by means of fore, aft, and side chains, shall carry, when said fore, aft, and side chains are taut, a black ball on each side of the dredge, in some conspicuous place at least eight feet above the deck, and near the position of the side chains; at night, these balls shall be replaced by a red light and which shall show all around the horizon and be plainly visible at a distance of one mile.

155. When a steamer wishes to pass the dredge, drill boat, or rock breaker, at a point where it might foul its side chains, it should

ask permission to pass, by using the signal for port or starboard, as provided in the foregoing rules, and the dredge, drill boat, or rock breaker shall immediately lower its chain on the side asked for by the steamer, indicating its fulfillment of this by, in the daytime, lowering the ball; in the night, putting out the red light.

156. If the dredge, drill boat, or rock breaker is unable to lower its side chain, or should consider it dangerous for the steamer to pass on the side asked for, the dredge, drill boat, or rock breaker will blow the danger signal, when the steamer will stop until the ball or light signal given above shall be shown.

157. Any master or pilot of any steam vessel who shall flash, or cause to be flashed, the rays of the searchlight into the pilot house of a passing vessel shall be deemed guilty of misconduct and shall be liable to have his license suspended or revoked; in general, searchlights shall not be used for navigation purposes in transit through the Canal, since the aids to navigation are sufficiently abundant to obviate any danger, or necessity for using them.

158. When a vessel is in distress and requires assistance from other vessels, or from the shore, the following shall be the signals to be used or displayed by her, either together or separately, namely:

First—Flames on a vessel, as from a burning tar barrel, oil barrel, etc.

Second—A continuous sounding with any fog signal apparatus, or firing a gun.

Third—Rockets or shells showing stars, fired one at a time, at short intervals.

159. In connection with these, vessels may use the international code and special signals with shapes, hereafter described.

160. When lighters, barges, scows, or Canal boats are tied or moored along any wharf, or along the shore in the channel in the navigable waters of the Canal Zone, including the Canal and approaches thereto, it shall be unlawful to moor them more than two deep, thereby obstructing the channel.

161. Except in the terminal harbors or the authorized anchorages, vessels shall not moor alongside one another in any part of the Panama Canal. In the terminal harbors and authorized anchorages, more than two vessels shall not be moored alongside each other, except that additional power hoists may be moored alongside two vessels so connected, while actually engaged in transshipping cargo.

162. Nothing in this rule shall be construed as affecting the right of The Panama Canal to moor barges used by Canal construction and maintenance in any manner that may be deemed proper.

163. Every piece of plant, except seagoing suction dredges, whether dredge, rock breaker, or drill barge, that is engaged in excavating or preparing to excavate the Canal, whose position is stationary, or moving from time to time over the face of the shoal that it is working on or removing, shall have the prior right to such position, and it shall be unlawful for any person or persons, navigating a ship or otherwise, to foul abovenamed plant or its moorings in any way whatever.

164. All barges moved from berth to berth along wharves or banks of the Canal shall be moved by being handled by proper towboat for same, and it shall be unlawful to move barges by hand power in the navigable fairways of the Canal, unless to preserve life or property in peril.

GENERAL REGULATIONS.

165. While in a terminal port or in transit through the Canal, no vessel will be allowed to throw overboard any ashes, cinders, ballast, solid matter of any kind, boxes, paper, or anything that will float, heavy slops, or anything that will tend to deface or make the waters of the Canal unsanitary. This does not apply to water closet chutes, nor to the water used in cooking or in cleaning tableware, but does prohibit the throwing overboard of bones, pieces of meat, vegetable and fruit parings, or any heavy slops that can be carried until the open water of the sea can be reached.

166. No vessel shall make fast or run any lines to any marking buoy, beacon, or aid to navigation; this does not prohibit the use of mooring buoys for the purpose for which they were intended; vessels must use every precaution to guard against injury to any of the aids to navigation in Canal waters; should any damage or injury be inflicted, it shall be immediately reported to the captain of the port.

167. Any vessel arriving at the ports with gunpowder or other explosives on board will not be admitted to the wharves or allowed to land the same until a report is made to the proper authority, and an arrangement entered into for the immediate disposal of the explosives.

168. Vessels are not allowed to anchor in the channel of the Canal or its approaches, unless in case of distress, when assistance should at once be requested.

169. If for any reason not an emergency, a vessel must anchor, she must do so in such a location that it will not interfere with the navigation of the channels.

170. All vessels upon entering port will be assigned to anchorage or wharves by the captain of the port.

171. Vessels must not anchor on the range line of any range lights.

172. Vessels will be held liable for all damage done to the Canal or any part of its plant or equipment, of any character or description whatsoever, whether the damage be done to the floating equipment, wharves, locks, or banks of the Canal; and in the case of the sinking of any floating or other equipment belonging to private persons or corporations in the channel of the Canal, or its approaches, side channels, or along its wharves, that create or tend to create an obstruction in the Canal or its approaches, side channels, or along its wharves, the person or company owning the sunken equipment may be given 30 days to remove the same. Should he or they fail to do so, the Canal authorities may remove the obstruction and the person or corporation owning the same shall pay all the expense of the removal of the obstruction, to be collected by a civil suit in the Zone courts and a levy and sale of any property of the persons or corporations, found in the Canal Zone or its harbors.

173. The Canal authorities may order the removal of the obstruction at once, or remove it without waiting for action by the owners, and the cost of such removal shall be taxed and collected as mentioned above.

174. Should a vessel go aground, collide, be in immediate danger, or meet with any serious accident while in Canal waters, the Canal authorities shall have the right to supervise and direct all operations in relation thereto, that may be necessary to float her or clear the wreckage, but the master and all others under him, as well as every appliance on board

the ship which may be of use, shall be placed at the disposal of the Canal authorities without additional charge or claim against the Canal.

175. Vessels wishing to unload or load ballast, will be assigned anchorage by the captain of the port, and must have a proper chute, so arranged as to prevent ballast from falling overboard.

176. No warp or line shall be passed across any channel or dock, so as to obstruct the passage of vessels or cause any interference with the discharging of cargoes.

177. If any damages shall be caused by vessels or their mooring cables to the works of any harbor, the parties responsible for same shall pay the costs for necessary repairs, and the same may be recovered in the courts of the Canal Zone.

178. If a vessel occupying a berth at a wharf or pier, with or without the consent of the captain of the port, fails to vacate such berth when ordered by him, or, when not loading or unloading, fails to make way for another vessel that wishes to load or unload, the captain of the port shall then cause such vessel to be moved to some other berth, or be anchored in the stream, and the expense of such removal shall be paid by the master, agents, or owners of such vessel, and, in case of their neglect or refusal to pay such expense upon demand, it may be recovered in an action before any court having jurisdiction.

179. No vessel shall be entitled to a berth until application has been made by the master, owner, or consignee of the vessel to the captain of the port, and such application must state the length, draft, and kind of cargo. No one but the captain of the port has authority to assign berths to vessels. No vessel, whether at anchor or lying at a wharf, shall shift its berth, without permission from the captain of the port.

180. All goods, merchandise, and material of every kind, landed or placed on any pier, bulkhead, or other wharf property, or upon reclaimed land, must be removed therefrom within 36 hours; provided, that the captain of the port for good cause may extend the time. All goods, merchandise, and materials of every kind encumbering any pier, bulkhead, or other wharf structure, or reclaimed land, after the time designated for the removal thereof shall have expired, will be liable to be removed by the captain of the port to any warehouse or yard, at the sole risk and expense of the owner of such goods, merchandise, or materials, and all expense incurred for such removal and storage, or otherwise, shall be and become a lien thereon, and such goods, merchandise, and materials will not be delivered to the owner until the expense of such removal and storage has been paid.

181. It shall not be lawful for the owners, lessees, or occupants of any pier, wharf, or bulkhead, which has been covered with a shed to use such shedded pier, wharf, or bulkhead for the permanent storage of goods, merchandise, cargo, or material of any kind which may be discharged or placed thereon.

182. Piers, wharves, and bulkheads thus shedded are designated for the protection of merchandise and cargo, in transit, and such merchandise and cargo must be removed therefrom within 36 hours; provided, that the captain of the port may for good cause extend the time.

183. No accumulation of material upon the piers, wharves, bulkheads, and reclaimed

land will be allowed, and whenever any pier, wharf, bulkhead, or reclaimed land shall be encumbered or obstructed in its free use by any vessel, merchandise, or material, or by any structure, encumbrance, or obstruction not authorized or permitted, the captain of the port may require the owner, agent, consignee, or person occupying, or in charge of such merchandise or obstruction, to remove the same without delay. Upon receiving said order the owner, agent, consignee, or person in charge of the vessel, merchandise, material, structure, encumbrance, or obstruction, in reference to which said order or direction was given, shall comply with the same without delay, and upon his refusal or failure to do so, shall be punished by a fine or imprisonment, as hereinbefore provided.

184. No fishing nets will be allowed in any place in the Canal, along its wharves, or in its channels, whenever, in the opinion of the Superintendent of Transportation, such nets interfere or might interfere with navigation, and it shall be the duty of the owner thereof, upon notification, to remove them immediately.

185. Any one finding any buoy out of position, or lights not working properly, should immediately report the same to the captain of the port.

186. Steamers, while within a harbor, must take all precautions to avoid the issue of sparks; any vessels will be held liable for all damage resulting from neglect of this rule.

187. No pitch, tar, turpentine, or other combustible, shall be boiled on any wharf, or on board any vessel without permission from the captain of the port.

188. In case of fire on board a vessel, all masters of other vessels shall render such assistance as may be in their power.

189. A vessel, anchored or moored in the harbor or lying at a dock, must at all times, night or day, have on board a sufficient number of men to take care of the vessel.

190. No vessel shall unload lumber, timber, or piles in the waters of a harbor without permission of the captain of the port, who shall designate where such lumber shall be rafted, so as to avoid obstructing or hindering the movements of vessels.

191. Lighters, barges, scows, and other vessels belonging to persons or corporations of any and all descriptions, shall be anchored in such places as the captain of the port may direct, and shall be at all times under his supervision and direction.

192. The captain of the port shall keep in his office records of all his proceedings, with statements of the result of all examinations and inquiries made by him, which records may be inspected by interested parties.

193. All notifications and requests to the captain of the port shall be made at his office, in writing, and shall be duly entered and filed by him.

194. It shall be unlawful for any person, without first having secured a pilot's license from the Government of the Canal Zone, to navigate any steam vessel with a net tonnage of more than 15 tons burden in Canal Zone waters.

195. All privately owned boats of every description must be registered and numbered, and the number must be obtained before they will be allowed to operate in any part of the Canal waters.

196. When numbers have been assigned, they shall be displayed in a conspicuous place, in the prescribed form.

197. All vessels moored to wharves, whether loading or unloading cargo or in the ordinary way of business, shall be moored to the wharves with rope hawsers only, and it shall be unlawful for any chain or wire hawsers to be used on any public wharf in the Canal Zone without the specific permission of the captain of the port.

198. All vessels, whether commercial or otherwise, moored to wharves in the Canal Zone, shall be compelled to keep watch at night and to have suitable firefighting apparatus on hand.

199. Whenever it shall become necessary to remove any especially inflammable cargo from commercial ships or ships, at public wharves of the Canal Zone, such as oils, gasoline, naphtha, petroleum, etc., it shall be necessary for notice to be given to the captain of the port at least two hours before such cargo shall be discharged upon the wharf, so that proper means can be provided to dispose of this class of material at the earliest possible moment.

200. It shall be unlawful for any person or persons, whether navigating a vessel or otherwise, to take possession of or use for any purpose, to make fast to or build upon, to alter, deface, destroy, move, or injure any part of the plant or equipment, whether floating or otherwise, belonging to the Canal.

201. These rules shall apply to and govern the navigation and use of the waters of the Panama Canal, as the Canal is now or may hereafter be constituted, as well as all Canal channels, lakes, harbors, and other auxiliary waters, as may now or hereafter be deemed necessary for Canal purposes, or which may now or hereafter be under the jurisdiction of the Canal Zone Government.

WOODROW WILSON.

THE WHITE HOUSE,
July 9, 1914.

[No. 1990.]

Postal Savings Transactions for June.

A statement of postal savings transactions at Canal Zone post-offices for the month of June, follows:

OFFICE.	Amount Issued.	Amount Paid.
Ancon.....	\$17,051.00	\$18,917.00
Balboa.....	19,583.00	29,148.00
Corozal.....	23,003.00	30,097.00
Cristobal.....	20,004.00	17,796.00
Culebra.....	7,640.00	12,239.00
Empire.....	4,241.00	10,070.00
Gatun.....	9,505.00	12,094.00
Las Cascadas.....	2,358.00	1,876.00
Paraiso.....	13,096.00	13,755.00
Pedro Miguel.....	6,119.00	6,488.00
	\$122,600.00	\$152,480.00

Balance on hand June 1...	\$528,361.00
Deposited during June...	122,600.00
Withdrawn during June...	\$152,480.00
Balance on hand July 1...	498,481.00
	\$650,961.00

Amusement Avenue at San Francisco Exposition Named "The Zone."

The exposition committee of the Panama-Pacific Exposition at San Francisco has adopted the title "The Zone" for the main amusement avenue. The name was chosen as the result of a prize offer issued in 1913, Mrs. J. Cortissoz of San Francisco being the winner. In 1911, the name was suggested by Mr. C. B. Sexton, then in the employ of the Isthmian Canal Commission, and was published in a San Francisco paper on March 15, 1911.

In response to the prize offer for suggestions for names issued by the committee in 1913, about 30,000 replies were received. Of this number, six submitted the name "The Zone." The reply of Mrs. Cortissoz was the first to be opened, and the prize was accordingly awarded to her.

Sale of Scrap and Retired Material.

Report of sales of scrap and retired material shows a heavy increase during June. Approximately 6,000 tons of scrap were delivered to Mr. M. Rovetta. Sale of over \$30,000 worth of material was made to the Venezuelan Government, and sale of approximately 60,000 pounds of scrap copper and brass was made in the United States. For the first time in many months the Chicago House Wrecking Company made some shipments on their French scrap contract,

approximately \$2,000 being collected from them.

Value of Canal Supplies Received in June.

The total value of material received during the month of June was \$1,010,808.03, distributed, as follows:

Mount Hope (stock).....	\$347,867.13
Division of Erection.....	*348,087.82
Division of Terminal Construction.....	36,114.72
Dredging Division.....	26,007.33
Mechanical Division.....	72,484.18
Health Department.....	1,792.82
Panama railroad.....	23,611.34
Division of Municipal Engineering.....	19,555.22
Executive Secretary.....	857.05
Fortifications Division.....	52,538.90
Auditor, The Panama Canal.....	417.80
Permanent buildings.....	79,034.06
Division of Canal Transportation.....	2,045.75
Electrical Division.....	389.91

Total..... \$1,010,808.03
*Includes \$249,870 for substation material settled in June.

The material came forward in 40 steamers, total weight of cargo, exclusive of lumber, ties and piling, being 11,130 tons.

LABOR FORCE AND QUARTERS IN JUNE.

The force report for June 24 shows the actual working force of The Panama Canal on that date to have been 25,289; of the Panama railroad, 4,343, and of the contractors, 41, a total effective working force of 29,673. This is a decrease of 1,377, as compared with the statement of May 27, and a decrease of 16,273, as compared with the report for June, 1913. The gold force on the Canal work, composed almost exclusively of white Americans, was 4,257, divided, as follows: The Panama Canal, 3,790; Panama railroad, 442; contractors, 25, a decrease in the total gold force of 109, as compared with the statement for May. Detailed figures of the total force employed on the Isthmus, by departments and divisions, are given below:

(1) Includes 12 Asiatics. (2) Includes Sabanas police station, Taboga Island, Naos Island, Culebra Island, and Palo Seco. (3) Includes Miraflores. (4) Includes 53 Panamanians. (5) Includes Empire, Las Cascadas, and Bas Obispo. (6) Includes eight American negroes. (7) Includes Colon Beach and Colon Hospital. (8) Includes 18 East Indians, nine American citizens, and 236 Panamanians. Gold force of contractors (included above), 30 bachelors.

RECORDING TIME CLOCKS.

Various Departments at Balboa Shops to be Supplied With These Devices.

New recording time clocks are being placed in service in the machine shop, forge, pipe, tin, and copper shop, boiler and shipfitter shop, paint shop, car shop, planing mill, office, and roundhouse at Balboa shops. Fifteen clocks will be installed, two in each of the above-named buildings, except the paint shop, roundhouse, and office, in which one clock will suffice for both gold and silver employees. All are electrically synchronized by a master clock in the office of the superintendent of the Mechanical Division.

The times at which employees check in and out are recorded by the clocks on ruled cards, one to each employee. At the top of the card are written the employee's name, shop roll number, designation, and rate of pay. Below are spaces for 15 days in the first half of the month, and on the back of the card are 16 spaces for the second half. Each of the day spaces is divided, horizontally, into spaces for the first and second periods of the day (or night) and for overtime. Each of these spaces is subdivided for checking in and out. The cards fit closely in a slot in the base of the clock, and guides and stops in the interior are automatically adjusted with the passage of each day and period to make the recording numerals strike the proper space on the card.

The cards are filed, in the order of roll numbers, in a rack beside the clock. Each employee, on coming to work, takes his card from the rack, inserts it in a slot in the clock, and presses a lever. This causes the recording numerals to register on the card through an inked ribbon, an act indicated by the sounding of a small bell. The employee then withdraws the card and places it in a rack on the other side of the clock. When he checks out, a similar operation takes place, the stamped card being then replaced in the first rack, ready for use at the checking in for the next period. The clock records on the basis of a 24-hour day, in tenths of an hour. Calculation of time worked and pay due is thus done entirely by the decimal system.

The printing ribbon is in two colors and shifts automatically at the beginning and end of each period. In other than regular working hours the clock stamps in red; during the regular working hours, in blue. Thus, if an employee is late in reporting, or checks out before the close of the period, the red numerals draw the timekeeper's attention to the fact.

On account of the irregular conditions un-

der which overtime work is performed, all overtime is to be recorded at one clock, placed in building No. 1, the machine shop. When an employee is to work overtime, his shop timekeeper is notified, and immediately after the employee has checked out from regular work the timekeeper sends his card to the checking-in rack at the clock in building No. 1. As soon as the employee checks out from overtime work, the timekeeper in charge of the clock at building No. 1 returns his card to the checking-in rack in the building in which the employee works regularly.

The new system of clocks is being adopted gradually, the former system being maintained as a check on its accuracy. It possesses considerable advantages in accuracy and simplicity.

Civil Service Examinations.

Examinations for the following-named positions are scheduled to be held, probably on September 13: Clerk, Panama Canal Service; copyist topographic draftsman, topographic draftsman, nonapportioned Departmental Service; junior engineer draftsman, Engineer Department at Large; kindergarten teacher; local inspector of boilers, local inspector of hulls, assistant inspector of boilers, assistant inspector of hulls, Steamboat Inspection Service (not for appointment in Canal Zone); matron, Indian Service; pharmacist; physician, all services except Philippine; postal clerk, Panama Canal Service; telegraph operator; veterinarian.

The fall edition of the Manual of Examinations has not been received as yet; announcement will be made immediately upon receipt of a supply.

Announcement will be made later of the examinations to be held in October.

Applications should be secured from and filed with this office. Applications will not be received after August 21; this date may be changed if necessary. The place and date of examination should be omitted in application forms. A card of admission will be sent to those found eligible to be admitted, just before the examination.

In answer to questions as to residence, applicants must show residence in a State or Territory of the United States, and county thereof, up to the time of filing application.

ISTHMIAN CIVIL SERVICE BOARD.

Culebra, C. Z., August 1, 1914.

The residents of Panama, who have been ordered to make sanitary improvements to their property, can now obtain gravel at the rate of \$1, United States currency, per cubic

yard, by making application to the Panama Railroad Company. All orders will be filled upon receipt of same bearing stamped approval of the Health Department. Gravel will be furnished under this arrangement only to those property owners who are required by the Health Officer to place their premises in a sanitary condition.

Church Bazaar.

The Woman's Altar Guild of Christ Church, Colon Beach, will hold a bazaar at the Cristobal clubhouse, on Saturday afternoon and evening, August 8. Fancy needlework articles, as well as practical pieces, will be on sale. There will be ice cream and home made cakes and candies. Tea and sandwiches will be served during the afternoon.

Future of Ancon Study Club to be Determined.

A meeting of the Ancon Study Club will be held at the Hotel Tivoli on Thursday afternoon, August 6, when the future of the club will be determined upon. Any members who may be on the Isthmus, but have removed from Ancon, are asked to be present.

Blind Student Returns to the Isthmus.

The native blind boy, Elysus James, who, for two years, was a student at Perkins Institute for the Blind, Boston Mass., as the ward and protégé of the Canal Zone Federation of Women's Clubs, has returned to Colon. Efforts are being made to procure proper work for him to do. The boy has been trained in chair caning and manual work; he has also had some training in music in which he is said to be especially gifted.

Cristobal Dancing Club.

The Cristobal Dancing Club will hold a shirt waist dance on Saturday evening, August 8, 1914, at the Cristobal clubhouse.

W. H. MARSH, Secretary.

Cristobal, C. Z., August 3, 1914.

Missing Persons.

Any one having information regarding the whereabouts of James McScott, who is supposed to be on the Isthmus of Panama, is requested to communicate with S. J. Berman, 7709 Linwood avenue, Cleveland, Ohio.

THE CANAL RECORD is in receipt of an inquiry for the address of Miss Mildred Bignon, formerly of Atlanta, Georgia, whose last address was given as Ancon, C. Z.

Eggs for Hatching.

Eggs for hatching, from white Leghorn chickens, can be had from the Corozal farm at \$1.50 for 14 eggs.

CLASSIFIED EXPENDITURES—THE PANAMA CANAL.

OFFICIAL CIRCULARS.

Electric Current Furnished Employees.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 21, 1914.

CIRCULAR No. 676:

1. Effective August 1, 1914, and until further notice, the following rules and regulations will govern the use of electric current by employees in quarters:

2. Electric current will be supplied in quarters, without charge to the employee, as follows:

(a) Current for standard lamps installed by the electrical division in the original outlets provided.

(b) Current for a table lamp or reading lamp, the property of the employee, consuming a total of not more than 80 watts, which is attached to original outlet provided by means of an approved extension cord and plug, and which is used in place of the standard lamp provided for said outlet. Not more than one such installation, using more current than the standard lamp which it supplants, will be allowed in one apartment.

(c) Current for extra lights installed by the electrical division for use in pianos to keep out moisture.

3. Electric current for additional lamps, or for lamps to be used in original outlets provided, in place of the standard lamps supplied (except as provided in Paragraph 2, Sections B and C), will be sold to employees at the following monthly rates:

(a) Current for each lamp consuming not more than 60 watts..... \$0.50

(b) Current for each lamp consuming more than 60 watts and not more than 100 watts 1.00

4. Electric current for the operation of each electric appliance and electric heating apparatus, excepting lamps, will be sold to employees at the following monthly rates:

Consumption.	Rate.
100 watts, or less.....	\$0.50
Over 100 to 550 watts.....	.75
Over 550 to 1,000 watts.....	1.00
Over 1,000 to 1,500 watts.....	1.50
Over 1,500 watts.....	Special rate will be fixed.

5. No charge will be made for less than a full month. Charges will accrue until the end of the month in which written notice is received by the electrical engineer that applicant desires that the service be discontinued. No deduction will be made for vacation periods. Bills will not be rendered. Monthly charges must be paid to the collector within 15 days after the end of the month. If not so paid, charges will be increased 25 per cent and service discontinued, not to be resumed, except with the authority of the Governor. Deposits may be made with the collector to cover charges for not less than six months against which monthly charges will be applied.

6. Suitable outlets for all additional lights, and for each electric appliance or heating apparatus consuming more than 100 watts, will be provided in wooden quarters upon approved application from employees. No additional outlets, however, can be provided in the permanent quarters.

7. Any employee occupying quarters not connected with the 24-hour circuit, desiring continuous service, shall pay the expense of providing same.

8. A permanent deposit in amount fixed by the Auditor to cover two months' charges increased by any additional charges which may accrue through failure to pay must be made with the collector, before any installation is made. This deposit, after deducting any unpaid charges, will be refunded on discontinuance of service. Application for refund should be made to the Auditor.

9. The Panama Canal reserves the right to discontinue the service at any time and disclaims any obligation, expressed or implied, on account of interruption or discontinuance of service after installation has been made, and the applicant waives all claim for loss or damage by reason of such interruption or discontinuance.

10. Application for the above service should be made by the employee to the Governor on Form PC 350-2, provided for that purpose.

GEO. W. GOETHALS,
Governor.

Leave Regulations.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 27, 1914.

ALL CONCERNED:

1. Cases are continually arising where heads of departments and divisions are granting permission to employees to absent themselves from duty prior to leave of absence already authorized and shown on leave order. As no restrictions are placed on the localities in which leave may be spent, this practice should be discontinued at once, and, if any time off is desired prior to the time of sailing, the leave of absence must be made effective on the initial date the employee goes off duty.

2. In the case of an employee whose service terminates

by resignation, or who is discharged on account of reduction of force and is granted a leave of absence with pay, the last day of his leave for which he receives pay is the date on which his service terminates, and termination papers should be prepared accordingly.

3. Attention is called to Paragraph 5 of Circular 602, which reads:

"Employees must report from leaves of absence and sick leave at the beginning of the forenoon or afternoon period of their working days, and will not be permitted to report during working hours. Time will begin only after reporting for duty."

In a number of instances, reports of return to duty show that employees are not reporting in accordance with this rule, and heads of departments and divisions are directed to strictly conform to the requirements thereof.

GEO. W. GOETHALS,
Governor.

List of Employees for Jury Service.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 29, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

I am advised by the district attorney that there have recently been a number of instances in which heads of departments and divisions have requested that employees summoned for jury duty be excused on the ground that their services could not be spared, and it has sometimes been difficult, therefore, to obtain a full jury from the panel summoned.

I desire that you furnish this office a list of the employees of your department or division, who are qualified to serve as jurors, and whose services can be spared for duty without serious inconvenience to the work. The qualifications of a juror are:

1. Citizen of the United States.
2. Between the ages of 21 and 65.
3. In good standing and in full possession of ordinary faculties.
4. Resident of the Canal Zone for three months.
5. Able to read, write, and understand the English language.

The following persons are exempt from jury duty, and their names should not be included in the list furnished:

1. Attorneys at law.
2. Physicians.
3. Ministers of an established religion.
4. Members of the military, naval, and police forces.
5. Officers of The Panama Canal, of the rank and above the rank of resident engineer.

The list should give the name, age, residence, and occupation of each employee.

GEO. W. GOETHALS,
Governor.

Accountable Official.

EMPIRE, C. Z., July 24, 1914.

CIRCULAR No. 68:

Effective July 25, 1914, Mr. W. R. Holloway, supervisor, Division of Operation and Maintenance, will cease to be an accountable official, and will transfer his property to Mr. F. C. Clark, Superintendent of Pacific Locks, who is hereby designated an accountable official of The Panama Canal.

H. A. A. SMITH,
Auditor, The Panama Canal.

Approved: GEO. W. GOETHALS,
Governor.

New Form of Transfer Slip.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 28, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

New form of transfer slip, No. PC 277, is now in stock at Mount Hope. Please destroy your supply of old Form CE 277, and make requisition on Mount Hope for a supply of the new form at once.

C. A. McILVAINE,
Executive Secretary.

Estimates of Cost on Work Requests.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 25, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

Attention is called to the fact that estimates of probable cost are not being made on work requests. The Governor directs that this estimate must be made in all cases, and work requests submitted without it will be returned.

C. A. McILVAINE,
Executive Secretary.

Examinations by Board of Local Inspectors.

THE PANAMA CANAL,
BOARD OF LOCAL INSPECTORS,
ANCON, C. Z., August 4, 1914.

The Board of Local Inspectors will conduct examinations at the administration building, Ancon, on Wednesday,

August 12, 1914, beginning promptly at 2 p. m., for persons desiring the following classes of licenses: Pilots, masters, mates, marine engineers, chauffeurs, and navigators of motor boats. All applicants for license must procure from the office of the board, Ancon, forms of application and information respecting the filling out of the same, not later than the day previous to the examination.

All persons desiring chauffeurs' licenses must provide themselves with automobiles with which to demonstrate their ability properly to operate the same. The demonstration test for applicants for chauffeurs' licenses will be given on Tuesday, the day preceding the regular examination, at 2 p. m., at the administration building, Ancon; on Wednesday, the day of the regular examination for out-of-town applicants, at 2 p. m., at the administration building, Ancon.

Applicants for licenses as navigators of motorboats, will be required to give a demonstration of their ability properly to operate such boats, and will be obliged to provide themselves with boats for this purpose. This test will be given on Thursday, the day following the written examination, as follows: At Cristobal, upon arrangement with the captain of the port; at Gamboa, at 8 a. m.; and at Balboa, at 2 p. m. Applicants for the test at Cristobal or Balboa should present themselves at the office of the captain of the port; at Gamboa, the deputy inspector will be present at the Panama railroad station at the hour abovementioned.

By direction of the chairman of the board.
W. H. HYDE,
Clerk of the Board.

Appointments.

THE PANAMA CANAL,
THE PANAMA RAILROAD COMPANY,
FREIGHT AND PASSENGER DEPARTMENT,
COLON, R. P., July 30, 1914.

CIRCULAR No. 112:

Effective August 1, 1914, Mr. C. J. King, acting local agent, at Colon, is appointed local agent, vice Mr. J. C. Warren, deceased.

Mr. E. G. Booth, acting steamship ticket agent, Colon, is appointed steamship ticket agent, vice Mr. C. J. King.

J. C. ANGEL,
Freight and Passenger Agent.

Approved: C. H. MOTSETT,
Superintendent.

Misdirected Letters.

Hotel Aspinwall Launch Service.

The launch *Louise* will sail from the dredge landing at Balboa for the Hotel Aspinwall on Taboga Island at 9.10 a. m., on Monday, Thursday, and Saturday of each week. The time of sailing permits connection to be made with train No. 3, which arrives at Panama from Colon at 8.35 a. m., daily.

COMMISSARY DEPARTMENT.

European Agents for Commissary Supplies Unable to Fill Orders.

The Commissary Branch has received a cable from agents in Hamburg, Germany, advising that they are unable to make shipments during the present political conditions in Europe. This same condition will probably obtain with other European agents. The commissary has been purchasing many articles in the European market that could be purchased there with greater economy than in the United States. It will now become necessary to purchase most of these supplies in the United States, and as the prices of food supplies there may advance as a result of the European war, there may result an increase in cost of commissary supplies.

Special Sales.

The following sales are announced:

SHOES.

At Pedro Miguel commissary until August 11, 1914, inclusive.

At Cristobal commissary, beginning August 13, 1914.

HATS.

At Ancon commissary until August 11, 1914, inclusive.

At Pedro Miguel commissary, beginning August 13, 1914.

MEN'S AND WOMEN'S FURNISHINGS.

At Balboa commissary, beginning August 10, 1914.

Commissary Hours.

The commissary stores are open during the following hours: From 8 a. m., to 12.30 p. m., and 3 to 6.30 p. m.

The gold departments of the Cristobal store will open at 2 p. m., on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open until 7 p. m.

Cold Storage Prices.

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

BALBOA.

The first "Smoker" at the local clubhouse was held on Friday night, July 31. Over 300 men were present. The program included sketches by Messrs. Woolf and Stoger; Corporal Baker in monologue, and the Downe Company with their song numbers. Prof. Aguirre, with his company of three, presented a program of magical tricks, hypnotizing, and fancy bicycle riding. Willoughby and Jordan, two local wrestlers, gave an exhibition of wrestling, Willoughby securing the first fall in 12 minutes. Music for the occasion was furnished by the Guatemalan orchestra. The last number on the program was a tug-of-war between the pipefitters team, composed of W. Jordan, T. Clark, J. McKenzie, John Freeland, and W. West; and the athletic team, composed of T. Conners, M. Ludeck, W. Scott, E. Cristoff, and F. W. Hoff. The athletic team won the contest after a pull of three minutes.

Balboa won the series of games in the checker meet between Culebra and Balboa last Saturday night at Balboa, by the score of 40 to 30, thus winning the meet. Balboa having defeated Culebra in the series played at Culebra by the score of 20 to 17. Arrangements are being made to play the Cristobal team a series of games in the near future.

COROZAL.

Physical Director P. T. Woolworth is planning a trip up the Chagres River with a party of Corozal boys on Saturday, August 8.

High scores for the past week in bowling were made, as follows: *Tenpins*—White, 234, 212, 204, 201; Terriett, 231, 216, 205, 202; Parks, 214; Boesen, 203; *Duckpins*—Harper, 118; Thirsk, 107; Barlow, 107; Parks, 105; Clanges, 104; Gustavson, 104; Davis, 100.

Gymnasium classes have been started by Physical Director Woolworth; the men's classes are held on Tuesday and Friday nights, and the boys' classes on Tuesdays, Thursdays, and Fridays, from 9.30 to 11 a. m. These days will be adhered to as strictly as possible.

Corozal defeated the Cristobal indoor baseball team on Saturday night by a score of 12 to 2. The result of the game was in doubt until the ninth inning. The lineup follows:

Corozal—Sims, pitcher; L. Ridge, catcher; E. Roberts, short stop; R. Caruthers, first base; C. B. Conant, second base; T. Brehaney, third base; Whiston, held.

Cristobal—G. Duer, pitcher; J. Raymond, catcher; C. Garlington, short stop; W. Mathues, first base; D. Raymond, Fraser, second base; Heenan, third base; E. Roberts, Ashton, field.

PEDRO MIGUEL.

The high scores made in bowling during the past week were: *Tenpins*—S. Farrar, 211. *Duckpins*—Margeson, 104; Piper, 101; Whiston, 121.

Over 90 bachelors from Pedro Miguel and Paraiso attended the dinner prepared for them by the ladies of both towns, on Friday evening. After the serving of turkey and other home cooked articles, a program of songs, toasts, and speeches was given. In return for their entertainment, the bachelors are to give a social for all the townspeople of both places, later in the month.

The boys' department from Gatun visited the local clubhouse on Saturday, and played a match game of indoor baseball with the local boys. The Pedro Miguel boys won the game by a score of 23 to 17. Later, the boys bowled two other games, and the Pedro Miguel team won again.

The membership of the local clubhouse has reached the highest point since the building was opened. The membership, in July, consisted of 146 civilians, 165 soldiers, and 20 boys.

CULEBRA.

On Sunday night, August 2, the last song service was held in the schoolhouse. These services have been held regularly since July, 1913.

The last moving picture show was held in the schoolhouse on Monday night, August 3. The building will be torn down this week. Special entertainers were engaged for the occasion, but owing to their missing the train, this feature was cancelled. Mrs. Crook gave several solos. Mrs. Koperski played the piano during the entertainment.

A "Smoker" was held on Thursday night, July 23, at which 160 men were present. The program was, as follows: Bass solo, Louis Cantor; mandolin solos, Mr. Geo. W. Ramsey; soprano solos, Mrs. Laura Crook; Violin solos, Dr. E. Hill; Flying ring work and balancing acts, Mr. R. L. DeFeet; monologues, Mr. L. A. Thompson. Four moving picture reels were shown between acts, and Gray's orchestra furnished music during the evening. Refreshments of home made cake, sandwiches, and ice cream were served; also, cigars.

At the moving picture exhibition on Saturday night, July 25, Mrs. Laura Crook sang four solos, accompanied by Mrs. Randolph.

Messrs. Horgan, Harris, and Wallerstedt, represent-

ing the Balboa Y. M. C. A. checker club visited Culebra, and played two games with each member of the local checker club. Balboa won 20 games, and Culebra 17 games. Eleven games were drawn. The high score for Balboa was made by Harris, who played 16 games and won nine. The high score for Culebra was made by Dr. Dunn, who played six games and won six. The members of the Culebra club are Dr. Dunn, Messrs. Fox, McColley, McClure, Armstrong, Warner, Wilson, and Rattiner. More challenges are welcomed.

GATUN.

A game of indoor baseball was played between two teams from the Tenth Infantry on Saturday evening, August 1. The "Blues" won from the "Reds," the score being 29 to 26. Mr. Kjellander acted as referee.

A vaudeville entertainment was given on Monday, evening, July 27. The program follows: Motion pictures, Pathe's weekly; magic, Prof. Aguirre of Ecuador; motion pictures, "The pirates" (Part 1); hypnotism, Prof. Aguirre; trick bicycle riding, Louis Pacheco; motion pictures, "The pirates" (Part 2); trunk mystery, Prof. Aguirre and Señora Aguirre; motion pictures, "The way to Arizona."

The following will receive medals as prizes in recent bowling tournaments: H. H. Hodges, W. J. Humphrey, P. R. Kiger, L. A. Schandler, Edward Walsh, and Mrs. J. J. Walsh.

The song service continues to draw about 175 people each Sunday evening. On August 2, Mrs. Allen played a piano solo, the children of the Gatun Sunday school gave several selections, and Mrs. Stillwell sang a soprano solo.

The Gatun boys enjoyed a trip to Pedro Miguel on Saturday, August 1, under the care of Mr. Arvid Kjellander.

The Tenth Infantry band gave a concert on Tuesday evening in the handstand in front of the clubhouse.

CRISTOBAL.

A concert was given by the orchestra of the *Prins August Wilhelm*, on Monday night, July 27.

Mr. W. L. Scheid and Miss Maud Sutherland won the single folks duck pin tournament on Tuesday, July 28. The scores follow:

Mr. Scheid and Miss Sutherland.....	504
Mr. D. V. Raymond and Miss Lillian Cotton.....	475
Mr. A. Gibson and Miss Foestrom.....	472
Mr. Kerrington and Miss Butler.....	472
Mr. Ashton and Miss Corri.....	469
Mr. Levy and Miss Ragsdale.....	449
Mr. Drew and Miss Bevington.....	449
Mr. Gill and Miss Butler.....	448
Mr. Steele and Miss Cox.....	447
Mr. Russell and Miss Stevens.....	445
Mr. Smith and Miss A. Gibson.....	428

High duckpin scores for the week were: Scheid, 104; Smith, 104; Gill, 100.

High tenpin scores for the week were: Pinney, 222; Barte, 220; Buser, 220; Collins, 216; Russell, 211; and Peterson, 203.

Over 200 people attended the stereopticon lecture given by Dr. Henry Pittier on the forests of Panama, on Thursday, July 30. After giving the reasons for the nature of soils and climatic conditions on the Isthmus of Panama, Dr. Pittier described its forests. He stated that there is no reason why the lumber industry in Panama should not be profitable as many species of trees here are very good for lumber. Following the lecture, colored slides were shown of the forests and native peoples of Panama. Mr. Philippe Bunau-Varilla, the French engineer, was to have addressed the discussion club on August 6, but as there had arisen some doubt as to his being on the Isthmus later than August 4, he consented to make a short address following Dr. Pittier's lecture. Mr. Bunau-Varilla commended the United States for its treatment of all nations interested in the building of the Canal. He favored equal tolls to all nations, and believed that within a very few years the Canal will be financially self-sustaining, and eventually, very profitable.

There will be an all-Isthmian chess tournament at Cristobal on Saturday, August 8. Following the tournament, an hour of good fellowship is planned. All men interested in chess are invited to attend.

Prof. Gomez has started another class in Spanish for beginners, with 10 enrolled. There has been some inquiry regarding starting a class for boys. Prof. Gomez is willing to start such a class, if enough boys enroll, the class to be held during the day, at a convenient hour.

Two local pool tournaments are under way, one 100-point straight pool, the other French pool.

Movements of Vessels at Port of Balboa.

The arrivals and departures of steamships at the port of Balboa during the week ending at noon, August 1, were, as follows:

Arrivals—July 26, *Lyra*, from San Francisco; July 27, *Acajula*, from Salina Cruz; July 28, *Limari*, from Valparaiso; July 29, *Montano*, from Callao; July 30, *Ishimori*, from San Francisco; *Elisnore*, oil vessel, from Port San Luis.

Departures—July 23, *Quitto*, to Colombian ports; July 26, *Peru*, (P. S. N.), to Callao; July 27, *Ucayali*, to Callao; July 31, *City of Para*, to San Francisco; August 1, *Damara*, to San Francisco.

MOVEMENTS OF OCEAN VESSELS.

Legal Notice.

United States of America } In the District Court.

Canal Zone
The following named American citizens died intestate leaving personal property within the Canal Zone to the amount stated:

U.S.C.
Nelson Wheeler.....\$ 28.99

George Wagner.....179.09

The Administrator of Estates has filed a petition for the escheat of the abovenamed estates, in accordance with Section 779 of the Code of Civil Procedure.

Notice is hereby given to all heirs or creditors of the above estates to appear before this Court in the court-house at Ancon, on September 26, 1914, at 9 o'clock, a. m., to establish their claims, or to show cause why the said estates should not escheat to the Government of the Canal Zone.

E. M. GOOLSBY,
Clerk of District Court.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies on back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications.

THE CANAL RECORD.

Ancon, Canal Zone,
Isthmus of Panama.

No communication either for publication or requesting information will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Hydraulic Grader Ready to Begin Work.

The hydraulic grader, No. 1, which is to be used in sloping the banks of Culebra Cut, and in sluicing material down from slides, was removed from dry dock at Mount Hope on Thursday, August 6, and returned to Paraiso for final adjustments. The work performed at the dry dock was principally in the installation of the 16-inch suction through which the pumps are to draw water from the channel in which the grader is floating, and to deliver it at high pressure for sluicing.

With the exception of the work below the water line, performed at the dry dock, the grader has been assembled alongside the wharf at Paraiso. The hull of a retired double-end clamshell dredge, No. 3, formerly the hull of an old French suction dredge, rebuilt at the dry dock shops in 1903, was overhauled and rebraced for the installation of the new machinery. This hull is of iron, 114 feet long by 30 feet wide, and 10 feet six inches deep. The machinery, described in THE CANAL RECORD of April 15, 1914, was purchased and installed according to plans furnished by the Mississippi River Commission, and a superstructure was erected, similar to those on pipeline suction dredges and the new dipper dredges, to contain quarters for the crew and an office for the master. The work is now practically completed and it is expected to begin operating tests about the middle of this week.

Information Sent Broadcast from Canal Radio Stations.

For the benefit of shipping in waters contiguous to the Canal, the radio stations at Colon and Balboa send broadcast at 4 a. m., 12 noon, 4 p. m., and 8 p. m., any notices to mariners which may be supplied by the port captains for the respective ends of the Canal. For instance, the Colon station has been broadcasting the information that the light on the outer end of the Toro Point breakwater has been temporarily out of service.

An unofficial service for the benefit of people

at sea is being carried on by the Colon station, which each day at 3.30 p. m. sends broadcast about 200 words of news made up of extracts from the Panama morning papers. The service is generally popular, and the Government vessels *Hannibal* and *Leonidas* which are working up and down the coast from Colon, on survey duty, have become so accustomed to it that their radio operators call for the day's report, if there should be a delay in sending it out.

Lock Entrance Caisson Launched at San Francisco.

The floating lock entrance caisson which is being built for The Panama Canal by the Union Iron Works Company in San Francisco, was launched on July 25, according to advices received from Mr. L. A. Mason, the assistant engineer in charge of its construction. It has since been towed to the contractor's dry dock, about three miles from the ways, and subjected to a general examination and water test. Anticorrosive and antifouling compositions are being applied to the exterior surfaces from the keel up to the light draft line, at the 32-foot level.

At the time of launching, a little more than 1,350 tons of structural steel, or about 90 per cent of the total required to complete the caisson, had been erected on the keel blocks. Practically all of the main pumping system, exclusive of the pumps, had been installed. Of the permanent ballast, 580 tons, slightly more than 70 per cent of the total, had been laid. The purpose in launching the caisson without all of the parts completed was to lighten the draft sufficiently to allow it to be taken over the sill of the dry dock, which is 29 feet below the surface at high tide.

After the completion of work in the dry dock, the caisson will be towed back to the shipyards and the remainder of the structural parts, permanent ballast, pumps, electric motors, deck fittings, etc., will be installed. It is expected that this work will be finished early in September, after which the caisson will be towed to Balboa. The final acceptance test will be made at the lower end of Miraflores Locks.

Contract for the caisson complete was let in September, 1913, calling for delivery within 12 months. Erection has been rapid, considering that all of the steel was ordered from the East and inspected before shipment, over four months elapsing before the arrival of the material at the shipyards. The interval was devoted to work on the shop drawings and on a number of castings and fittings required for the main pumping system. The keel was laid on February 5, 1914.

The Governor has appointed Col. H. F. Hodges as his representative to act with the Board of Directors of the Panama National Exposition on matters connected with it and The Panama Canal.

TERMINAL RADIO STATIONS.

Plants of Greater Capacity Under Construction at Colon and Balboa.

As a part of the equipment of the Canal, new and larger radio stations are being constructed at Colon and Balboa to supplant the present stations in communicating with ships of the Army and Navy and commercial vessels within a normal operating radius of 500 miles from the Canal. Their service will be similar to that of the present stations, but will exceed in area the present 300-mile daytime reach of the present station at Colon, and the 200-mile daytime range of the Balboa station. The Colon station will be equipped with two interchangeable sets, the smaller to be used regularly for local work, and the larger to be switched in for farther communication when desired. The large set will be capable of communicating as far as Key West, and may thus be substituted for the Darien high power station in communicating with the United States, if the need arises. The larger set at Colon will use the equipment of the present station.

The Colon and Balboa radio services, while primarily for naval and military work in connection with the Panama Canal, and secondarily for shipping, will be used for all official communication with ships approaching or departing from the Canal, or in transit through the Canal. They will be opened, as the present stations are, to commercial service, under restrictions subordinating this use to Government needs and under the further restrictions imposed by international convention, such as, for example, the ruling that Government radio services may not be used for commercial messages between points in connection with privately owned submarine cable or overland wire service. The Colon and Balboa services will, further, be distinct from the service of the high power station at Darien, which will be used, except in case of emergency, for official business, communicating direct with the Arlington station near Washington and relaying messages to Government ships within a nominal radius of 3,000 miles of the Isthmus.

The new stations at the ends of the Canal will be practically identical in form, except that the Colon station will have a slightly larger power house, to accommodate the two sets of sending apparatus. At each the antennae will be stretched between two 300-foot steel towers, 600 feet apart. Each tower will be self-supporting, resting on three footings, arranged in an equilateral triangle, 60 feet on the side. The footings, which have been completed, with anchor girders, are blocks of concrete, nine feet square in plan, resting on piles driven through fill to rock. At Colon, where the piling is below sealevel, timber piles were used, but at Balboa, on account of higher elevation, reinforced concrete piles were driven.

The power houses, alike, except for the slight greater size of the one at Colon, are adjoined by identical operating rooms, with an office

beyond, all built of reinforced concrete, and one story in height. Suitable underground duct will be laid for the connecting wires; the high potential wires connecting with the antennae will pass through the center of a plate glass window. The power house and the operating room are in separate buildings, 15 feet apart, but connected by a covered portico, so that there may be no difficulty in passing from one to the other during a storm.

New quarters for the operators are part of the construction. At each station a 1-story 2-family frame house, and a 2-story frame barracks, or bachelors' quarters with mess and room accommodations for six men, are under construction. All of the quarters at both stations are under roof, and the interior finishing is in progress. The walls and roofs of the power houses and operating buildings have been built, and finishing off the walls and making ready the interiors is under way.

The new station at Colon is to occupy the present station grounds, between the Colon Hospital grounds and the quarantine house for steerage passengers. The area devoted to the station will probably be enlarged in the future by the removal of the quarantine house and the incorporation of its grounds in a Naval reservation. Such reservation has been made for the new radio station at Balboa, which occupies a site on the Balboa dump, about 4,000 feet out from the present commissary store, 6,500 feet inland from the land end of Naos Island breakwater, and approximately 1,500 feet west of Gabilan Rock, which is off shore from Punta Mala. The buildings overlook the Bay of Panama, east of the dump and the breakwater, and are visible from parts of the city of Panama.

Both stations will receive power from the Canal transisthmian electric system, developing it through transformers to the potential required for operation. They will use a different system of radiation from that proposed for the Darien station, so that there will be no interference. They will conform to the international convention, using a wave length of 600 meters for communication with commercial ships, and from 1,000 to 2,500 meters for naval work.

Motor Busses for Ancon and Balboa.

In view of the fact that no tracks for railroad or street cars will be permitted to pass through the town of Balboa, or any closer to the new Administration Building than at present, the superintendent of the Panama railroad has been directed to requisition three motor busses suitable for carrying passengers. These busses will probably be similar in general design to those in use on Fifth avenue, New York City, and will be operated on a regular schedule, making trips between the entrance to the Ancon Hospital grounds and Hotel Tivoli; and various points in Balboa and Balboa Heights. They will be solely for the use of gold employees and their families.

Lecture on Hygiene Postponed to August 19.

The lecture on hygiene which was to have been given at Ancon hall by Dr. M. E. Connor before the junior auxiliary of St. Luke's hospital chapel, on Wednesday afternoon, August 5, was unavoidably postponed, and will take place at Ancon hall on Wednesday afternoon, August 19, beginning at 3.45 o'clock. Other meetings for August are the physical culture and folk dancing class, at Ancon hall

on Wednesday afternoons, August 12 and 26, from 3.45 to 4.45.

Further Passages of Vessels between Entrance Channels.

Since the passage of the steamship *Cristobal* from Cristobal to Balboa on August 3, and its return to Cristobal on August 4, test voyages between the terminal ports have been made with all of the Panama railroad vessels available. The successive voyages have resulted in greater smoothness of handling through the locks and in a reduced time of transit.

The *Advance* was taken from Cristobal to and through Miraflores Locks, on Sunday, August 9, and returned on the same day as far as Gatun, being locked through to the ocean the following morning; and the *Panama*, which arrived from New York on August 10, made a similar trip on August 11. On both of these trips, as on the passage of the *Cristobal*, old employees, with members of their families, were carried by invitation of the Governor.

On Saturday, August 15, the *Ancon* will pass from deep water in the Atlantic to deep water in the Pacific, and will officially open the Canal to commerce between the oceans. It will carry cargo to be transferred at Balboa for shipment to north and south Pacific ports.

PERSONAL.

Mr. William Penn Cresson has been appointed Secretary of the American Legation in Panama, and took charge of the duties of the position on August 1. He is a Pennsylvanian, born at Claymont, and received his education at the Delancey School in Philadelphia, at the University of Pennsylvania, and the Ecole des Beaux Arts, Paris. He traveled extensively in Persia and Kurdistan

in 1900, has contributed a number of articles on the Middle Eastern question to geographical magazines, and is the author of a work on Persia. He studied at the Ecole des Sciences Politiques in Paris in 1902, and from 1903 to 1907 engaged in architecture in the City of Washington. Afterward he took up ranching in Nevada, where he remained until he received his appointment, after examination, to the diplomatic service. He was appointed Secretary of the American Legation at Lima, Peru, on August 4 1909; to the post of Second Secretary of the Embassy at London on February 1, 1912, and Secretary to the American Legation at Quito on August 15, 1913. During the latter year, he was detailed to attend the White Slave Traffic Conference, held in London, and to report the proceedings thereof.

Raising Funds for Educating an Ecuadorean Girl.

Efforts are being made through the principal of the Methodist College in Panama City to raise money through the church and Sunday school for the education of a young Ecuadorean girl in the United States. Miss Arboleda, who will be the beneficiary, has arrived on the Isthmus from Quito, and was presented to the congregation at the seavall church at the service on Sunday morning, August 9.

Christian Science Meetings.

Permission has been granted by Judge William H. Jackson to the Christian Science Society of Ancon to hold meetings in the district courtroom, Ancon, until other arrangements can be made for its accommodation. The society has a membership of about 45, including residents of Ancon and Balboa. There is also a society of Christian Scientists in Cristobal, which has about 45 members. These organizations, which are independent of each other, are both branches of the Christian Science Church in Boston, the head of the movement in the United States.

The estates of these insane employees of the Panama Canal or the Panama Railroad Company are now in process of settlement, and any claims against these estates, or any information which might lead to the finding of heirs or to the recovery of property, bank deposits, postal savings or postal money order deposits, or any other moneys due them, should be presented at once to the Administrator of Estates, Ancon, C. Z. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once.

JOHN K. BAXTER,
Administrator of Estates.

SOCIAL LIFE OF THE ZONE.

Ancon Study Club to Disband.

At the called meeting of the Ancon Study Club, held at the Hotel Tivoli on Thursday afternoon, August 6, it was decided, in view of the fact that nearly all the active members of the club have removed from Ancon, to dissolve the organization. With the exception of the library, the properties of the club will be held until later in the year, when, if there is a sufficient interest for a reorganization, they will be ready for use. The pictures and art library will revert to the Cristobal Woman's Club, now the only existing general club on the Isthmus, when that organization convenes in October. The general library will be turned over to the Woman's Altar Guild of St. Luke's Hospital chapel. It will be placed in the little room, opposite the vestry room, and the books will be distributed from that place at regular hours to be announced later.

The Ancon Study Club, which was the only club in the Canal Zone affiliated with the General Federation of Woman's Clubs, was organized in January, 1912. Its sole object was the pursuit of some study. During the three and one-half years of its activity the members covered a wide field of work including the study of the history of Panama and the Panama Canal, the stories of the operas currently sung in America and the capitals of Europe, United States history, astronomy, observations of the constellations, and modern drama. Entertainments were given on several occasions, and special programs were prepared for the anniversary meetings.

Although not affiliated with the Canal Zone Federation of Woman's Clubs, the Ancon Study Club contributed to the philanthropic efforts of that organization, and carried on private charity until it was disbanded. The presidents of the club have been Mrs. H. C. Shick, Mrs. Woson, Mrs. Darrell, and Miss Beattie. The permanent librarian was Mrs. Mark White, at whose house the club held its meetings until her departure from the Isthmus in March, 1914. Mrs. Edwin L. Luce, now of Pedro Miguel, was the secretary. At the time of the dissolution the club had about 12 members.

Empire Church Notes.

The Empire missionary auxiliary to the Union Church of the Canal Zone will hold its regular monthly meeting at the home of Mrs. Helmer, on Friday, August 7. The auxiliary intends to continue its meetings as long as any number of its members remains in Empire, when the headquarters will remove to Balboa, where the society will work as an auxiliary to the Union Church of the Canal Zone.

The Fidelity Bible class, in connection with the Union church work in Empire, has suspended meetings, owing to the removal of members from the village. The meetings will be resumed in January at Balboa.

The Sunday school at Empire will continue for the present, there being enough encouragement in the membership and average attendance to warrant its continuance. Forty-eight children and adults were present at the session the last Sunday in July.

Parish activities in connection with St. Ferdinand's Church, Empire, will continue indefinitely, notwithstanding the removals

of communicants from the village and the unsettled condition of the community. Events held in the parish house in July were an entertainment by the soldiers of Camp Otis, aided by the woman's altar society and the men's Catholic club, which took place on the 14th; and the usual card party, under the auspices of the two societies, held on the 25th, at which 14 tables were occupied by the players.

The Rev. H. R. Carson, chaplain of Ancon Hospital and rector of St. Luke's hospital chapel, has removed from St. Mary's rectory in Empire to house No. 226, Ancon hospital grounds.

New Meeting Place for Culebra Sunday School.

The removal of the Culebra schoolhouse leaves the Union Sunday school for the fourth time without a meeting place. On account of the large membership, 60, and to the fact that the work is in an excellent condition, it has been decided to continue the school as long as enough members remain in the village to make it practicable. The classes will hereafter meet in the small building, formerly occupied by a news stand and barber shop, located just north of the Government hotel.

Changes in Local Salvation Army Staff.

Adjutant E. E. Grimes, who has been temporarily in charge of the Salvation Army in the Canal Zone, with headquarters at the institute in Cristobal, has been relieved from duty and sailed for Kingston, on the Royal Mail steamship *Danube* on Monday, August 4. He will be attached to territorial headquarters at Kingston, which has jurisdiction over the British West Indies, the Isthmus of Panama, and Costa Rica. Adjutant Grimes is succeeded by Adjutant Peter Terrace, who has arrived from London to take charge of the work in the Canal Zone and Panama.

Pythian Sisters Install Officers.

The semiannual installation of officers of Canal Zone Temple, No. 1, Pythian Sisters, Gatun, was held in the lodge hall on Thursday afternoon, July 30. The officers are:

Most excellent chief, Theresa Blake; excellent senior, Elizabeth Bradbury; excellent junior, Mary B. Wagner; manager of the temple, Ida Hollowell; mistress of finance, Mary B. Watkins; mistress of records and correspondence, Marian L. Stanner; protector of the temple, Margaret Williams; outer guard, Lettie Peterson; past chief, Susie P. Reese. The installing officer was Susie P. Reese. The temple will hold regular meetings on the first Thursday afternoon and the fourth Tuesday evening in each month. It is expected to have a social meeting following the business and routine work at each evening session, when the Knights of Pythias, who are members of the temple, will be present. These meetings have the further object of affording an opportunity for new members to become acquainted with their associates in the order.

Ancon-Balboa Dancing Club.

A new dancing club has been formed in Ancon under the title of the Ancon-Balboa Dancing Club. Its object is to hold semi-monthly dances at Ancon lodge hall, on the first and second Wednesday evenings in each month. The officers are: President, Roy R. Watson; vice-president, David Moffatt; secretary-treasurer, F. A. Lenow. These officers, together with two members of the club, J. A. Hanson and Burton A. Trips, constitute the board of governing directors. Messrs. Arthur Hanson, William Murtagh, and William Van Fleet compose a committee of three to arrange the details of membership, entertainment, dances, music, and refreshments. The first dance is scheduled to take place on September 2. The charter for the enrollment of members will remain open until that date.

Any one having information regarding the whereabouts of Mr. William J. Shannon, a steamshovel machinist, who left the service of The Panama Canal on February 10, 1913, and who is supposed to be on the Isthmus, is requested to communicate with the American Legation, Panama.

ASSIGNMENT OF CHURCH SITES AT BALBOA AND LA BOCA.

The committee, consisting of Maj. P. M. Ashburn, representing Lieutenant-Colonel Mason, Capt. R. E. Wood, D. E. Wright, and W. L. Phillips, appointed by the Governor to consider the applications for church sites at the La Boca silver settlement, and the new Balboa townsite, held a meeting on July 15. It was found that the requirements of certain of the applicants were such that a maximum area of 10,000 square feet for each church site at Balboa, and 7,500 square feet for each site at La Boca would not accommodate the build-

ings the organizations desired to put up, and at the same time conform to the Canal Zone building regulations. Further, on account of the irregularity of the blocks, an orderly arrangement of lot lines designed to give suitable street frontage has produced in certain cases a slight increase in area over a rectangular lot of equal frontage. The committee, therefore, recommended that no fixed limit of lot area be adopted. The applications reported as having been received up to the date of the July 15 meeting, were, as follows:

BALBOA.

Organization.	Representative.	Buildings.	Lot No.	Area Sq. feet	Date work begins.
Baptist.....	Rev. John Wise.....	Church and parsonage.....	3	11,600	At once.

ANCON-BALBOA QUARTERS.

Status of Family Quarters and of Public Buildings in Pacific Terminal Town.

The third completed 4-family concrete house, of the new quarters being erected in Balboa and on the toes of Ancon Hill, on its northwest side, adjoining the new Administration Building, was turned over to the district quartermaster for assignment on Monday, August 3. This makes 26 houses, quartering 68 families, added to the Ancon-Balboa district since March; six of them were completed prior to May 1. The total number of new or transferred houses authorized in the district at present is 78, quartering 166 families. On March 1, there were 246 family quarters, in 138 houses, occupied in this district, exclusive of Ancon Hospital. The new buildings will, accordingly, increase the family houses by over one-half, and the number of family quarters by approximately two-thirds. No new bachelors' quarters have been authorized. On August 1st, 272 bachelors' rooms in Ancon were occupied by 409 men and 88 women, and 280 rooms in Balboa were occupied by 586 men.

The status of work on the several types of family quarters under construction in the district is now, as follows:

Concrete houses, 4-family—Work on 20 4-family concrete quarters was begun on January 5, 1914; work on 10 more was begun on March 16, but on June 27 it was decided, on account of a shortage of funds, to build only eight of the second group.

Of the first group, three houses have been completed and assigned. For all the rest of the group, the exterior walls have been completed and the roof cover has been laid; the finished tile roof has been laid on 12. The interior partitions have been completed in all but eight of them, in which the work is delayed by the plumbing; the plumbing has been finished in 13 of the group. All of the work on the 20 houses is now about 70 per cent complete.

Of the second group of the 4-family concrete quarters, now numbering eight houses, the walls have been carried almost to the eave level for six, and to almost the second floor level for the other two.

Concrete houses, 2-family—Thirty houses of this type were planned for, but the authorized construction has been reduced to nine. Excavation for the foundations was begun in April, and the foundations were completed in June. To August 1, the walls for six of the group have been carried up to and including the first floor slab.

Frame houses—All the new frame houses are

those transferred from other villages, notably Culebra, Gatun, and Empire, and being re-erected on the slopes of Ancon Hill, to the rear and southeasterly of the new Administration Building. The authorized frame construction includes:

Eighteen 1-family houses, of which 15 are completed and occupied; five 2-family houses, three now occupied; three Type-6 houses for one family each, two of which are completed, and work on one of which has not been begun; and 15 houses of various types for officials, of which five are occupied, nine are under construction, and one is yet to be moved.

MUNICIPAL BUILDINGS.

In addition to the quarters, a fire station, a schoolhouse, and a commissary store are under construction on the flat between the Administration Building and Sosa Hill. The work of demolishing the Canal clubhouse at Empire was begun on July 30, and the building will be reerected at the west end of Balboa Prado, at the foot of Sosa Hill and directly facing the Administration Building at the east end of the Prado.

Fire station—Excavation for the permanent concrete fire station to be situated below the Administration Building, north of the east end of the Prado, was begun and completed in June. A retaining wall, three feet in height, was built around the excavation and rock fill was placed in the hole to the level which permitted a concrete mattress to be set firmly on it. The mattress has been laid, and the foundation work is completed.

Schoolhouse—A temporary schoolhouse, to consist of four Type-5 bachelors' quarters placed together, forming a 2-story building with a plan roughly resembling the letter "H," is to be constructed across the Prado from the fire station. It will contain 14 class rooms, a laboratory, principal's office, and retiring room for teachers. As part of the site, raised by dry fill, was originally about nine feet higher than the approach, it was found advisable to sink first the concrete footings in the lower part and then to distribute over this area the spoil from the excavation for footings in the higher part, thus giving the site a more nearly even grade. Concrete is now being poured for the last of the footings.

Commissary store—The permanent commissary store, to be situated on the north side of the plaza at the Sosa Hill end of the Prado, will have plan dimensions approximately the same as the new concrete commissary at Ancon, but will be two stories in height. On account of the weight of the building, it will be supported on reinforced concrete columns, built up from bedrock. The rock lies from 15

to 30 feet below the surface of the fill, and excavation for the footings is being done by the open sheathed caisson method, aided by six power well drills. Ten of the required 65 columns have been completed.

Work on the proposed hotel, courthouse, post-office, sanitary inspector's office, district physician's office, permanent schoolhouse, and railroad station has not been begun. Work on the Administration Building, as recently reviewed, includes a variety of finishing operations.

American Institute of Electrical Engineers.

The August meeting of the Panama Section, American Institute of Electrical Engineers, will be held in the new administration building, Balboa, on August 23, at 9 a. m. Mr. W. F. Kleene will present a paper entitled "The distribution system of permanent townships." Mr. Wm. R. Holloway will give a short talk on "The practical side of duct line construction." After the meeting, there will be plenty of time for a trip through the new administration building and the shops. Visitors are welcome. C. J. EMBREE,

Secretary-Treasurer.

CULEBRA, C. Z., August 8, 1914.

Society of the Chagres.

Announcement was made in the Panama newspapers that the Society of the Chagres would go through the Canal on or about the 16th inst. It has been necessary to postpone this trip. It is requested that members of the society who would like to make it, send in their names to the undersigned, if they have not already done so. They will be notified of any arrangements which may finally be made.

JOHN K. BAXTER,
Secretary-Treasurer.

ANCON, C. Z., August 11, 1914.

Order of Railroad Telegraphers.

A regular meeting of Panama Railroad Division, No. 158, Order of Railroad Telegraphers will be held in Moose Hall, Hotel Normandie, Panama, on Saturday, August 15. Telegraphers requested to attend.

J. F. STAHL,
Secretary-Treasurer.

Girls' Athletic Club.

A girls' athletic club has been formed in Ancon by Miss Marion Blake, one of the 1914 graduates of the Canal Zone high school, with the object of encouraging the members in such athletic exercises as swimming, walking, and tennis playing. The girls have already walked from Ancon to Corozal and return, and are now contemplating a walk to Pedro Miguel and return.

CLASSIFIED EXPENDITURES—THE PANAMA CANAL.

A statement of classified expenditures of the The Panama Canal to May 31, 1914, follows:

PERIODS.	Department of Civil Administration.	Department of Law.	Department of Sanitation.	Department of Construction and Engineering.	General Items.	Fortifications.	Total.
Total to June 30, 1909.....	3,427,090.29	9,673,539.28	69,622,561.42	78,022,606.10	160,745,797.09
Total—Fiscal year, 1910.....	709,351.37	1,803,040.95	26,300,167.05	2,863,088.83	31,675,648.20
Total—Fiscal year, 1911.....	755,079.44	1,717,792.62	27,477,776.19	3,097,959.72	33,048,607.97
Total—Fiscal year, 1912.....	820,398.57	24,729.16	1,620,391.12	28,897,738.10	2,819,926.53	1,212,881.66	35,396,065.14

WORK ON EAST BREAKWATER.

Change in Plan to Reduce Cost.—Progress of Construction.

Following a change in plan for the construction of the east breakwater in Limon Bay, the dumping of rock from Sosa Hill quarry, which was to have begun on Monday, August 10, will not be started until early in September. The change consists in beginning the fill for the breakwater 1,800 feet further from shore than was at first decided upon. The trestle is not sufficiently advanced to allow dumping at this time in accordance with the new plan.

The primary purpose of the west, or Toro Point breakwater, was to protect shipping from the effect of the "Northerners", which drive from a northwesterly direction, approximately at right angles to the axis of the breakwater. After the visit of the Atlantic Fleet during the dry season of 1913, the General Board of the Navy called attention to the fact that the trade winds at times caused such a sea as to make small boat service to ships anchoring under the lee of the west breakwater, dangerous, and also will render coaling difficult under these conditions. The construction of an east breakwater was advocated, and it was undertaken at the request of the Navy. It juts out from Coco Solo Point at approximately right angles to the northeasterly seas and reaching to a point 2,000 feet from the outer end of the west breakwater. Consideration of the topography and cost led to the decision to make the breakwater a detached structure, 7,200 feet long, with its inner end 4,126 feet from the east shore of Manzanillo Bay. It has now been decided to shorten the breakwater by 1,800 feet, making its outer end the original 2,000 feet from the Toro Point breakwater, but its inner end 5,925 feet from shore. If it is found after construction that seas sweeping through the opening between the breakwater and the shore will be objectionable to shipping in the harbor, the breakwater will be extended toward the shore as far as is deemed advisable. As the completed breakwater will cost about \$475 per foot, the change in plan offers the possibility of a considerable saving.

At the close of work on Saturday, August 8, the double-track trestle had been driven a distance of 5,398 feet from the shore, the last bent completed being No. 326. The bents are 16 feet apart and during the past week the two piledrivers, working 12 hours a day, with "Split" shifts, have driven 24 bents every 24 hours. Under the revised plan, dumping will begin at bent No. 358, instead of at No. 246, as previously planned.

It was originally intended to have the connecting trestle, leading from the shore to the breakwater proper, built single-track, and it was so built for approximately 1,000 feet. It was found, however, that the material overlying the rock bottom was so soft as to make a single-track trestle unsafe in rough weather, and, beginning with bent No. 63, a double-track trestle has been constructed. For further safety and to facilitate operations, a second single-track trestle was started from the shore to parallel the first trestle to bent No. 63. This has been almost completed; it has been used as time work when operations at the outer end of the double-track trestle were held up. The trestle is being built with the tracks 14.5 feet above

the surface of the water. The water is about 42 feet deep at the present outer end of the trestle, and in some parts spliced piles as long as 130 feet have been driven.

Rail connection with Coco Solo Point is afforded by a turnoff from the previously constructed road to Margarita Point. The fact that the site of operations is only a 10 to 15-minute run from Mount Hope and Cristobal has considerably simplified field operations, especially with respect to repairs to equipment and quartering and subsisting the force, as compared with the Toro Point breakwater work. The only quarters constructed is a bunkhouse for watchmen. A machine shop and a sawmill shed are well equipped for repair work of a minor nature, but on account of the availability of the dry dock shops at Mount Hope, extensive equipment is not necessary. The only other buildings required were an office and a small store shed.

In connection with the work, an area of 34.4 acres adjoining the root of the trestle has been cleared and reclaimed from the swamp by filling. A total of 5.8 miles of new track has been laid, including connection from the Margarita Point road, a half-way siding along it, the trestle track, and storage yards. Dry spoil was received from a borrow pit at Mount Hope for extending the storage yards. A wharf, 16 by 100 feet, with trestle connection, has been built, and a harbor has been dredged, the *Sandpiper* having removed 58,562 cubic yards of material. A 6-inch water main has been laid from the Margarita Point main, and a 50,000-gallon tank has recently been installed in the yards. A 3-inch main is being laid along the breakwater trestle for fire protection and for supplying the piledrivers. The force now employed numbers 23 gold and about 300 silver men.

European Money Orders.

The Post-Office Department at Washington has advised that money orders on Europe are not to be issued in favor of any one person for more than \$100, and that the service is continued solely for the benefit of Americans who desire to return to the United States.

Money orders are not to be issued in unusually large amounts, or where the purpose is speculative. The department announces that money order business with Belgium and Egypt has been suspended.

Emigration of Laborers Continues.

The report of quarantine operations at the ports of Colon and Cristobal for the month of July shows an excess of emigration over immigration of 405 persons, as compared with a net emigration during June of 283. The total net emigration from the Atlantic and Pacific terminal ports during the twelve months ending July 31, 1914, amounted to 15,571 persons, the greater part of whom consisted of Canal laborers returning to their homes.

The total number of steamship passengers embarking at the ports of Colon and Cristobal from foreign ports during the month was 3,608, consisting of 1,779 cabin, and 1,829 steerage passengers. The number of persons landing from foreign ports at these points was 3,271, consisting of 1,920 cabin, and 1,351 steerage passengers. The excess of those who embarked over those who landed was 337. Only 33 steerage passengers came from the whole of Europe; the West India islands contributed 925, Colombia, 121; Cuba, 46; Costa Rica, 113; Venezuela, 17; and the United States, 18. The number of persons arriving "In transit" was 1,482, as compared with 1,355 in June.

The number of persons arriving at the ports of Panama and Balboa from foreign ports during June was 475, consisting of 351 cabin, and 124 steerage passengers. The number of persons who embarked for foreign ports was 543, consisting of 348 cabin, and 195 steerage passengers. The excess of those who embarked over those who landed was 68.

The number of vessels arriving at Colon and Cristobal in June was 100; at Balboa, 27.

Order of Isthmian Conductors.

The next meeting of the Order of Isthmian Conductors will be held in Ancon lodge hall at 9.30 a. m., on Sunday, August 16.

Southward trains will have preference over northward trains.

Trains stop at all stations, except No. 105.

Baggage for Balboa steamship connections will be handled as far as possible by trains Nos. 86, 83, and 96.

A labor train will leave Panama at 10.50 p. m., arrive Balboa dock 11.05 p. m., returning, leave Balboa dock 11.15 p. m., arrive at Panama 11.30 p. m., on nights when there is work at Balboa dock.

All trains daily, except 82, 89, 90, 93, and 99, which are discontinued Sundays.

Trains Nos. 83, 84, 85, 87, 88, 90, 93, 95, 96, 97, and 105 carry passengers holding transportation only.

OFFICIAL CIRCULARS.

Accounting for Property of The Panama Canal and the Panama Railroad.

THE PANAMA CANAL,
THE PANAMA RAILROAD COMPANY,
EXECUTIVE OFFICE,
CULEBRA, C. Z., April 1, 1914.

CIRCULAR No. 656-1:

By virtue of the authority contained in Executive Order of January 27, 1914, the following regulations relating to the responsibility for and the accounting for property are hereby prescribed:

1. The term "Property" includes all equipment, tools, and property, such as machinery, rolling stock, floating equipment, hand tools, animals, furniture, vehicles, etc., that neither enter into permanent construction nor are consumed, except by wear and tear, and are of a unit value sufficient to require the maintenance of a record thereof and an accounting therefor after issue from storehouses. The term "Equipment" shall include all items of comparatively long life, bulky nature, or considerable value which are designated by the letter E on the appended list of nonexpendable property. The term "Tools" shall include all other items of nonexpendable property. The Auditor of The Panama Canal, with the approval of the Governor, shall publish periodically any additions to or corrections of the list of nonexpendable property.

2. A permanent record shall be made of all property on hand April 1, 1914, and shall be added to as additional property is purchased or put into use. The record of equipment shall be maintained on Forms A-12, A-37, A-38, A-43, and A-44, showing names, complete descriptions, costs, appraised values or standard prices, the quantities received, transferred, surveyed, and on hand, and the value thereof; and any additional information that may be required. The record of tools shall be kept on P. C. 935 and shall be a physical record only, without detail as to sizes or prices, and shall show quantities received, issued, surveyed, transferred, and on hand.

3. General accounts classified as "Equipment accounts" and "Tool accounts" shall be opened on the books of The Panama Canal for the value of all property of The Panama Canal. Subaccounts, classified according to departments and divisions accountable for property, shall be maintained. The equipment accounts shall be further subclassified by classes of equipment, such as locomotives, cars, machines, tools, dredges, etc. Until a standard classification of equipment is issued, the card records of equipment shall be filed alphabetically; thereafter, they shall be filed alphabetically under each class, so that adding machine lists of the card balances may be taken for comparison with the balances shown on the equipment accounts of the Auditor's office. The detail accounts will represent the book value of tools in the custody of accountable officials and will be adjusted by inventories taken annually, or as required, the adjustment being handled by survey. Credits to these accounts on the Auditor's books will be from accomplished transfers and approved survey papers, and other documents authorized by the Governor.

4. The records of property shall be kept up-to-date in every particular and shall constitute perpetual inventories of the equipment and continuous accounts of the tools for which the various officials are accountable. The records shall be kept by the Auditor of The Panama Canal, or by the division having the custody of the property, as circumstances, in the opinion of the Governor, may require. The Auditor of The Panama Canal, through his inspection force, shall at intervals check the property records to determine whether they are being accurately maintained, and whether the detailed records of equipment agree with the controlling account; and as conditions may require, he shall make test inventories or complete inventories of property and check same against the property records.

5. All accountable officials shall protect their accountability for property by taking a memorandum receipt from any officer or employee who may rightfully have the immediate custody or use of the property.

6. If articles of public property are embezzled, lost, or damaged through the neglect or fault of the employee, the value of the property or amount of the damage shall be paid by the employee or deducted from any pay due him.

7. An inventory shall be taken of all property of the Panama railroad as of April 1, 1914, and the property of that company shall be accounted for thereafter to the local auditor of the company, under the same rules and regulations as apply to property of The Panama Canal.

8. When tools in serviceable condition are transferred from one accountable official to another or returned to stores, the invoicing officials shall prepare invoices showing unit prices and extensions, make entries on credit side of Form P. C. 935, and forward one copy of the invoice direct to the Auditor of The Panama Canal and send

necessary copies to the receiving officer for his record and accomplishment. The receiving official shall, on receipt of the property, sign the original and two copies and forward the original and one copy to the Auditor, and one copy to the invoicing official. Receiving officials, except storekeepers, shall enter items in the debit column of Form P. C. 935. Storekeepers receiving property from divisions will show the stores classification on the copies of invoices which are sent to the Auditor for debit to stores accounts.

9. When items of equipment for which individual cards are not maintained are transferred, invoices will be prepared and handled in the same manner as items of tools, except the debits and credits will be entered by accountable officials on Form A-12.

10. When large items of equipment, for which separate property card records are maintained, are transferred, invoices will be prepared and forwarded as in the case of tools. If the transfer is from one accountable official to another, a copy of the property card will be forwarded to the receiving official with copies of invoices and will be filed with his property records. If property of this class is returned to store, a copy of the property card will be forwarded with copy of invoices direct to the Auditor of The Panama Canal, or the local auditor of the Panama railroad.

11. All property transferred from one division to another or to storehouses, or issued by storehouses, except on foremen's orders, shall be invoiced on Form P. C. 924-1. No invoice shall include both equipment and tools. Expendable material shall not be included on an invoice with nonexpendable property.

12. Foremen's orders for nonexpendable property will be made only by persons authorized to order such property, and the number of persons so authorized in each department and division will be limited to as few as possible. Accountable officials will furnish all storekeepers and the Auditor with a list of the names of all employees authorized to draw nonexpendable property. Storekeepers will not honor foremen's orders signed by unauthorized persons.

13. Four copies of foremen's orders for nonexpendable property will be sent to the storekeeper, who will enter prices and complete description of articles delivered, and send the original and two copies to the Auditor, retaining one copy for his file. The Auditor will transmit priced and extended copies to the accountable official, from which entries will be made on the property records.

14. All items of nonexpendable property purchased either locally or in the United States, which are not taken into stock, shall be invoiced by the purchasing agent on the Isthmus to the division concerned. The Auditor will maintain a record of all such items as bills are certified, and check the invoices issued by the purchasing agent against that record, to determine if all items are invoiced promptly.

15. All property purchased or otherwise acquired will be charged to the proper equipment account at the original price, plus the cost of erection, and will be made by the Auditor from transfer invoices, foremen's orders, etc., to which will be added the cost of erection as reported by cost accountant. The only charges for equipment and its use to expenditure accounts, work for outsiders, etc., will be the estimated depreciation, the amount of which will be reported to the cost accountants by the Auditor. Small items of equipment on which it is not considered advisable to fix depreciation rates will be carried in the property account at original cost until worn out or destroyed, when they will be surveyed and their original cost charged to expenditure accounts and credited to the property account. The amount of such surveys will be reported by the Auditor to cost accountants monthly.

16. Tools or equipment in need of repairs, which are returned to stock under proper authority, will be invoiced to stores at original prices, the equipment or tool accounts credited with their value, and a corresponding charge made to the stores account. The cost of repairs will be invoiced to divisions turning in the equipment and charged to expenditure accounts. When the identity or ownership of repaired tools cannot be fixed, the cost of repairs will be charged to a suspense account and prorated to departments and divisions.

17. All forms shall be prescribed and any additional rules and regulations necessary to carry out the provisions of this order, shall be issued by the Auditor of The Panama Canal with the approval of the Governor.

Geo. W. GOETHALS,
Governor, The Panama Canal,
President, The Panama Railroad Company.

All containers, such as cylinders, tanks, drums, casks, barrels, jugs, carboys, demijohns, reels, bags, sacks, etc., which remain the property of contractors, or for which a refund is secured when same are returned to contractors, are nonexpendable property, and must be accounted for by sizes and kinds.

This property list is published for the information and guidance of all concerned.

This list does not grant authority for the dropping of any property now carried on property accounts.

Any nonexpendable item of property which may be applied and made a part of another item of property which is accounted for, may be expended on certificate of the accountable officer at the time same loses its identity and becomes permanently a part of some other piece of property.

Accounting for Cement Bags and Other Containers.

THE PANAMA CANAL.

EXECUTIVE OFFICE,

CULEBRA, C. Z., July 20, 1914.

CIRCULAR No. 656-3:

1. Effective July 1, cement bags and oil drums, which under agreement with contractors are returnable when in good condition at a fixed value, will be accounted for, as follows:

CEMENT BAGS.

2. When cement bags are invoiced to a division or to the Panama Railroad Company, the bags will be shown as a separate item on invoice or foreman's order.

3. The value of the bags will be charged financially to a stock account by the division, and accounted for on their property record.

4. When empty bags are turned in to store for return to contractor, the division returning bags will furnish a memorandum of count to the Depot Quartermaster or storekeeper with notice of shipment. No invoice will be made. Stock account will be credited and charge made to an account "Cement bags in transit" from report of property clerk. The Depot Quartermaster or storekeeper will issue a memorandum receipt unextended, to the division returning the bags, based on the field count. These receipts will be in triplicate if issued by the depot, and in quadruplicate if issued by storekeepers or district quartermasters. The division will be furnished one copy for property record, the store will retain one copy for file. If the bags are turned in at a line storehouse, the storekeeper will forward two copies of the receipt to Mount Hope depot when shipment is made to Depot Quartermaster.

5. When the Depot Quartermaster makes shipment to the United States, the receipts thus furnished will be the basis of the Isthmian count. A statement of each shipment will be furnished to the Auditor with copies of receipts attached.

6. The Depot Quartermaster will see that bundles are tagged with name of division, and report all cases of carelessness on the part of division in this respect to the Chief Quartermaster.

7. The General Purchasing Officer will furnish the Auditor with a report of the outcome of each steamer, showing bags received, accepted, and rejected. The Auditor will credit "Division stores" with credits deducted from United States bills for bags accepted on basis of General Purchasing Officer's report, and notify the divisions of rejections which will be charged to "Cement stock."

8. In the case of the Panama Railroad Company or contractors, the Auditor will notify them of bags accepted for their account, for which the Auditor will prepare voucher on receipt of bill.

OIL DRUMS AND OTHER EMPTY CONTAINERS RETURNABLE TO CONTRACTORS.

9. Where the contractor charges for containers allowing credit therefor when returned, the Depot Quartermaster will invoice against the various divisions financially for such containers as may be issued. These invoices should be made separately from those covering the contents, containers being nonexpendable. When the divisions return containers, they will invoice them to the Depot Quartermaster in the same manner as other material returned to stores.

10. Where the contractors furnished containers without charge, but under a contract providing for payment for those not returned, the Depot Quartermaster will accept a charge for all containers received at the rate for those not returned as fixed in the contract, and the Auditor will credit the amount on his books to the contractor.

11. When shipment in such containers is made by the Depot Quartermaster to storehouses or divisions, he will invoice the containers separately at the contract rate charged in case of failure to return. When empty the containers will be returned to the Depot Quartermaster at the same value. When containers are returned to the contractor, the Depot Quartermaster will be credited and the contractor's account debited with their value.

12. The Depot Quartermaster will forward to the Auditor at the end of each month a statement showing

the number and kind of containers returned, name of contractor, and order number. The Auditor will credit the depot with the total value of the containers returned.

GEO. W. GOETHALS,

Governor.

Pilot Service.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., July 30, 1914.

CIRCULAR No. 681:

1. Attention is invited to the 13th, 14th, and 15th paragraphs of Executive Order of July 9, 1914, providing "Rules and regulations for the operation and navigation of the Panama Canal and approaches thereto, including all waters under its jurisdiction," reading, as follows:

(13). Pilotage for vessels in transit through the Canal will be free, not will they be charged pilotage for entering or leaving a terminal port when it is for the sole purpose of passing through the Canal, but should such vessel, while in Canal waters, discharge or receive freight or passengers, or take on board supplies, provisions, stores, or fuel, or remain for the purpose of effecting repairs, or make either terminal a port of call, she may be liable for entrance or departure pilotage, as the Canal authorities may direct.

(14). Pilotage in and out of the Atlantic and Pacific terminals of the Canal is compulsory, and all vessels, unless otherwise exempted, will be compelled to take a regular Government pilot upon entering or leaving. The fact that the master or any officer of any vessel holds a pilot's license for any of the waters of the Canal Zone will not authorize the vessel to enter without taking a Government pilot.

(15). No person, steamer, company or corporation will be allowed to maintain or employ pilots in Canal waters for the exclusive use of their own or any other vessels; all pilots, without exception, must be duly authorized and licensed by the Canal authorities and be in the employ of the Canal. This shall be interpreted to mean that the Canal authorities shall be prohibited from issuing restricted pilot licenses for small craft in Canal waters, or any other that they may see fit.

2. The charge for pilotage will be based upon the maximum draft of the vessel, and will be at the rate of \$1 per foot or fraction thereof, but no fraction will be considered unless it equals or exceeds six inches, in which case, the full charge for one foot will be imposed for such fraction.

3. In case a pilot be taken outside the Atlantic breakwaters, an additional fee of \$10 will be charged. Pilots will board vessels just inside the Atlantic breakwaters, and at the seaward end of the buoyed channel on the Pacific end.

4. The above charges will become effective August 1, 1914.

GEO. W. GOETHALS,

Governor.

Organization of Health Department.

THE PANAMA CANAL,

EXECUTIVE OFFICE,

CULEBRA, C. Z., July 21, 1914.

CIRCULAR No. 660-19:

1. The Health Department, under the supervision and direction of the Chief Health Officer, is charged with all matters relating to maritime sanitation and quarantine in the ports and waters of the Canal Zone, and in the harbors of the cities of Panama and Colon, and with land sanitation in the Canal Zone, and sanitary matters in said cities, in conformity with the Canal Treaty between the United States and the Republic of Panama, and existing agreements between the two Governments thereunder, and all matters relating to hospitals and charities.

2. The Health Department is subdivided, as follows:

- (a) Division of Hospitals and Charities.
- (b) Division of Sanitation.
- (c) Division of Quarantine

3. The Division of Hospitals and Charities is under the direct supervision of the Chief Health Officer. Included in its jurisdiction are such hospitals as may from time to time be established in the Canal Zone, the Santo Tomas Hospital in the city of Panama, such institutions as the Palo Seco leper asylum, the Corozal farm, and any other institutions that may be established by proper authority, and such dispensaries as are or may be found necessary.

4. The Division of Sanitation includes the Division of Zone Sanitation and the health offices of the cities of Panama and Colon:

(a) The Division of Zone Sanitation is under the direct charge of the General Inspector, who will perform the duties heretofore assigned to the Chief Sanitary Inspector and to the General Inspector. He shall have direct charge, management, and control of all work performed or entered upon within the Canal Zone for the prevention or suppression of diseases. He shall be charged with the duty of securing the enforcement of all sanitary regulations, and perform such

other duties appertaining to his position as may be required by the Chief Health Officer or the Governor of The Panama Canal.

(b) The Health Officer of the city of Panama, under the supervision and control of the Chief Health Officer shall enforce the sanitary rules and regulations in force in said city, and shall perform such duties as may be prescribed by law, and also such other duties appertaining to his office as may be required of him by the Chief Health Officer or the Governor of The Panama Canal.

(c) The Health Officer of the city of Colon, under the supervision and control of the Chief Health Officer, shall enforce the sanitary rules and regulations in force in said city, and shall perform such other duties as may be prescribed by law, and also such other duties appertaining to his office as may be required of him by the Chief Health Officer or the Governor of The Panama Canal. His territorial jurisdiction shall extend to and include the municipality of Cristobal, in the Canal Zone, and such areas in the vicinity thereof as may be assigned to him by the Chief Health Officer.

5. The Division of Quarantine shall include the quarantine stations of Balboa-Panama, Cristobal-Colon, and the quarantine inspection at Bocas del Toro. It shall be under the direct charge of the Chief Quarantine Officer, who shall have charge of the sanitation of the harbors and vessels lying therein, and shall see that such measures are enforced as are necessary for the proper hygiene of vessels, their cargoes, and personnel, whether in port or en route, and to prevent the vessels from being a source of danger to other vessels or to the port; he is authorized to certify bills of health to vessels clearing from ports under his jurisdiction, setting forth in such bill of health the conditions of the port, vessel, cargo, passengers, and crew; he is authorized, at the request of the master of any vessel, to disinfect and otherwise place such vessel in a sanitary condition, so that it may leave the port in free pratique, and be able to make entry at the port of destination without further disinfection or detention in quarantine; he shall prevent the entry into the Canal Zone of any person whose presence would be a menace to the public health or welfare, or who would be liable to become a charge upon the public.

GEO. W. GOETHALS,
Governor.

No Gratuity Pay for Time off Account of Trip Through Canal.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., August 7, 1914.

HEADS OF DEPARTMENTS AND DIVISIONS:

There appears to be some misconception regarding the time taken off by employees invited by me to make one of the trips through the Canal. There is no authority to carry this as gratuity time, and the day required for the trip will, therefore, be charged against the employee in every instance. Report of absence should be sent in on Form P. C. 484 for each employee absent.

GEO. W. GOETHALS,
Governor.

Accountable Officials.

EMPIRE, C. Z., August 7, 1914.

CIRCULAR No. 69:

Effective at once, Mr. C. H. Motsett, Superintendent of the Panama railroad, and Mr. F. R. Blunt, Superintendent of Railroad Transportation, are designated accountable officials of the Panama railroad.

Mr. Motsett will account for all nonexpendable property of the Panama railroad, except that in the custody of Mr. Blunt. The officials named in Circular 59, dated May 25, 1914, and Circular 61, dated June 15, 1914, will cease to be accountable officials upon completing transfer of property.

H. A. A. SMITH,
Auditor, Panama Canal.
Approved:
GEO. W. GOETHALS,
Governor.

Act of Congress.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 29, 1914.

CIRCULAR No. 600-9:

EXTENDING APPROPRIATIONS FOR LAST HALF OF JULY, 1914.

The extract quoted below from an Act of Congress is published for the information of all concerned.

GEO. W. GOETHALS,
Governor.

JOINT RESOLUTION to continue the provisions of a joint resolution, approved June 30, 1914, entitled "Joint resolution extending appropriations for the necessary operations of the Government and of the District of Columbia under certain contingencies."

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,

that the provisions of a joint resolution entitled "Joint resolution extending appropriations for the necessary operations of the Government and of the District of Columbia under certain contingencies," approved June 30, 1914, are extended and continued in full force and effect for and during the last half of the month of July, fiscal year 1915.

* * * * *
Approved July 16, 1914.

Barred from Further Employment.

THE PANAMA CANAL,
THE PANAMA RAILROAD COMPANY,
OFFICE OF SUPERINTENDENT,
COLON, R. P., August 6, 1914.

ALL CONCERNED:

Westmore Manners, a native of St. Vincent, and Luther Campbell, a native of Jamaica, employed as laborers on Balboa docks were arrested, tried, and convicted of petit larceny in the Magistrate's Court, Ancon, they being arrested for pilfering freight on Balboa docks. They should not be reemployed in any capacity.

C. H. MOTSETT,
Superintendent.

Jurisdiction of Yardmasters over Conductors and of Roundhouse Foremen over Engineers at Terminals.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 13, 1914.

CIRCULAR No. 678:

1. All Panama Canal and Panama railroad conductors and engineers will report to the transportation department, Panama railroad. Conductors at terminals will be under the jurisdiction of yardmasters and must obey their instructions. Engineers at terminals will be under the jurisdiction of roundhouse foremen until they have passed out of the latter's territory.

2. Yardmasters will be responsible for calling train crews and seeing that they report for duty 30 minutes before leaving time.

3. Roundhouse foremen will be responsible for calling engine crews and seeing that they report for duty 30 minutes before the leaving time of their engines.

4. All correspondence from the transportation department of the Panama railroad to the Mechanical Division, relative to handling of engines, will pass through the roundhouse foremen.

5. The transportation department of the Panama railroad will bulletin and assign all conductors and engineers through yardmasters and roundhouse foremen, respectively.

6. When firemen are needed at any point, they will be secured through the traveling engineer's office.

7. All discipline for engineers will be applied through the roundhouse foremen, and all discipline for trainmen will be applied through the general yardmasters.

8. When regularly assigned runs are vacant temporarily for a period of 30 days, or more, such vacancies will be advertised and assigned to the oldest applicants, who will be accorded the same conditions as the regularly assigned men. In case there are no applicants, the temporary vacancy will be filled by the youngest man in the "Chain gang," provided he is eligible for passenger service. It will not be in order for men holding regular runs to bid on these temporary assignments.

9. In case of official or other specials, where crews are picked by the officials, these crews should be held on the work until finished. All other specials should be run first in first out of the home terminal.

10. Permanent work trains will be advertised for a

period of five days. Temporary work trains ordered from day to day will be handled by the first crew out. Men on vacation have a right to take what their age entitles them to when they return, provided the runs which they desire were advertised during the time of their absence.

11. The "Chain gang" crews will run first in and first out, and no changing off will be allowed, unless permission is received from the transportation office.

GEO. W. GOETHALS,
Governor, The Panama Canal,
President, The Panama Railroad Company.

WEATHER CONDITIONS, CANAL ZONE, JULY, 1914.

The weather for the month was abnormally warm and dry. Rainfall was below the station averages at all stations, except Juan Mina. The monthly totals ranged from 2.42 inches at Trinidad to 10.74 inches at Colon. The maximum precipitation recorded in one day was 3.27 inches at Porto Bello on the 28th. The estimated rainfall over the Gatun Lake watershed was but 46 per cent of the July average based on 14 years' record.

Monthly mean air temperatures were two degrees F. above normal, and the highest record for the month of July at each station.

The average hourly wind velocity also was the highest of record for July at all stations, while the relative humidity, atmospheric pressure, and daytime cloudiness were deficient.

Few fogs were observed during the month. Of the fogs observed 39 per cent were dissipated by 6.30 a. m., 96 per cent by 7.30 a. m., and 100 per cent by 8.30 a. m.

The following table summarizes the weather conditions for the month:

STATION.	Press're (reduced to mean of 24 hourly).	Temperature.					Mean relative humidity.	Precipitation.			Wind.				
		Mean.	Maximum.	Date.	Minimum.	Date.		Total inches.	Station average.	Days of .01 inch or more.	Total movement (miles).	Prevailing direction.	Max. velocity in (miles).	Direction.	Date.

Washing Ice on Delivery.

THE PANAMA CANAL,
SUPPLY DEPARTMENT,

CULEBRA, C. Z., August 3, 1914.

CIRCULAR No. 177:

District quartermasters and commissary storekeepers.—The following copy of letter addressed to the district quartermaster at Cristobal, under date of August 3, 1914, is quoted for your information and guidance:

"Complaint has been received at this office that your ice men refuse to wash ice before putting same in ice boxes. Kindly see that they begin doing so at once, wherever the sink is adjacent to the ice box, or where a bucket of water is left out in which the ice may be dipped."

R. E. Wood,
Chief Quartermaster.

Commissary Hours.

The commissary stores are open during the following hours: From 8 a. m., to 12.30 p. m., and 3 to 6.30 p. m.

The gold departments of the Cristobal store will open at 2 p. m., on Saturdays and sailing days of Panama railroad vessels.

In rush periods, all stores will remain open until 7 p. m.

	U.S.C.
Nelson Wheeler.....	\$ 28.99
George Wagner.....	179.09
The Administrator of Estates has filed a petition for the escheat of the abovenamed estates, in accordance with Section 779 of the Code of Civil Procedure.	
Notice is hereby given to all heirs or creditors of the above estates to appear before this Court in the court-house at Ancon, on September 26, 1914, at 9 o'clock, a. m., to establish their claims, or to show cause why the said estates should not escheat to the Government of the Canal Zone.	
E. M. GOOLSBY, Clark of District Court.	

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

GENERAL.

The motion picture dates for the week August 17 to 22 is, as follows: Monday, Gatun; Tuesday, Balboa; Wednesday, Pedro Miguel; Thursday, Cristobal; Friday, Culebra; Saturday, Corozal.

BALBOA.

A meeting was held on Monday evening, August 3 to elect captains for the track and water teams to represent Balboa in the coming meet at Corozal on Labor Day. P. Hulsebosch was elected captain of the track team, and J. R. Bingham was elected captain of the water team. Training for the Labor Day meet was started immediately after the meeting, the track team taking a short run to the new radio station and back.

Permission has been requested to use the space next to the corral at Balboa for a baseball diamond, and as soon as possible it will be put in condition for the use of the ball players.

COROZAL.

The following high scores were made on the bowling alleys last week:

Duckpins—Sims, 110; Boesen, 104; Brien, 103; Briscoe, 103; Harper, 102; Hanna, 102; Thirsk, 100; Davis, 100.

Tenpins—Thirsk, 214; Gustavson, 211, 203; Terriett, 210; White, 208; Parkis, 202; Barlow, 202.

A list of library books is being made up, and those having suggestions may drop them in the "Suggestion box" at the secretary's desk.

PEDRO MIGUEL.

The mixed bowling match which was played on Thursday evening resulted, as follows: First high doubles, Mrs. Landers and Mr. Margeson, 187; second high doubles, Mrs. Landers and Mr. Whiston, 175; high score for the ladies, Mrs. Landers, 89; high score for the men, Mr. Margeson, 104. The prizes offered are the pennants of the various clubhouses.

A committee of young ladies of Paraiso and Pedro Miguel are preparing a social for the children of both towns to be held at the clubhouse on Tuesday evening, August 18, from 4 to 7 o'clock. All children of both towns are invited. A program of games is being arranged. Refreshments will be served.

A farewell social was given for the company of soldiers stationed at Pedro Miguel Lock, on Thursday evening, by the ladies of Paraiso and Pedro Miguel. Refreshments, consisting of sandwiches, cakes, and punch were served to all present by the ladies of the village. The Tenth Infantry band was a feature of the program, and the soldiers entertained with recitations, mimics, songs, etc. A pie and watermelon contest was held.

GATUN.

A number of the members of the Pedro Miguel clubhouse, with their wives and friends, visited the Gatun association on Saturday evening, August 18. The duckpin contest resulted in Gatun winning two out of three games played. For the pool match, the results were:

Gatun.		Pedro Miguel	
A. J. Heitman.....	100	J. J. Campbell.....	25
V. A. Kerruish.....	100	S. P. Dennis.....	81
J. W. Ludlum.....	100	J. Smith.....	83
S. C. McKee.....	83	Wm. Edwards.....	100

Total..... 383 289

A farewell reception will be given to Companies F and G of the Tenth Infantry on Saturday, August 15. Various athletic contests will be held, together with an entertainment, at which refreshments will be served.

Señor Alcindo Barcellos, the concert pianist from Brazil, gave a recital at the Gatun clubhouse on Tuesday evening, August 11. He was assisted by Madame Faure, contralto. The program was, as follows:

Part 1.

1. Fenster—First Sonata.
 - (a) Allegro moderato.
 - (b) Andante.
 - (c) Scherzo.
 - (d) Presto..... Señor Barcellos
2. Contralto solo..... Mrs. Crook

A class for the study of German held its initial lesson on Thursday, August 6. Herr Aufwässer of Berlin,

Germany, is the instructor. The fee is 25 cents per lesson. Fifteen have enrolled so far.

CRISTOBAL.

The first game of basketball played this season at Cristobal resulted in a victory for Mount Hope, with the coaling station as the opposing side. The score was 19 to 16.

Twenty-three players participated in the all-Isthmian chess tournament, on Saturday, August 8. Mr. Wm. DuBois of Culebra led in number of points, with Messrs. Warner, McClure, Kingsbury, Rattiner, and L. E. DuBois following in the order named.

Messrs. Scheid, Clark, Ashton, Roberts, Roscoe, Franklin, Tuttle, Brugge, Raymond, Burgoon, and Gibson have entered for a local straight pool tournament.

A large map of Europe, 13 feet six inches by eight feet six inches, has been made and placed in the lobby of the clubhouse on which will be shown the movements of the troops taking part in the European war. Acknowledgement is made for Mr. A. Papio's kindness in drawing the map.

The members of the boys' department expect to spend Friday, August 14, in trip to Cruces.

Supplies for the Canal.

The following steamers, with supplies for The Panama Canal and Panama Railroad Company, arrived at the ports of Colon and Cristobal during the week ending August 1:

Prinz August Wilhelm, July 27, from New York, with 117 kegs bolts, for stock.

Colon, July 28, from New York, with 15 kegs paint, 32 kegs bolts, 25 rolls wire fencing, 24 boxes toe calks, 80 pieces pipe, 81 cases lead pipe and plumbing supplies, eight cases envelopes, 526 bundles pipe, 1,000 garbage cans, 15,040 bags cement, for stock; eight reels wire rope, three boxes mining machinery, one propeller wheel, two pieces machinery, for Dredging Division; 10 packages welding apparatus, four cases pneumatic riveting machinery, two reels wire 62 crates fire brick, 18 crates plumbing fittings, 11 cases electrical machinery and lubricating oil, nine boxes incandescent lamps, for Mechanical Division; three crates hypsulphite of lime, one piece pipe fitting, two cases electrical machinery, 230 barrels leadite, for Division of Municipal Engineering; one case hardware, two boxes ranges, eight boxes marble, one case machinery, one case sandpaper, for permanent buildings; one piece cast iron pipe, one box safety treads, for lock erection; one box brass cleats, 44 packages junction boxes, for electrical division; one box machinery, two boxes storage batteries, one box wicks, for Division of Terminal Construction; 12 boxes fire extinguisher apparatus, three boxes photographic supplies, for Executive Secretary; 81 packages medical supplies, for Health Department; and a miscellaneous cargo, the whole consisting of 17,756 packages, weighing approximately 268 tons.

Evelyn, July 29, from New York, with 10 packages medical supplies, for Health Department; 34,896 bags cement, 265 barrels and 250 drums gasoline, for stock.

Jupiter, July 29, from Mobile, with 177 pieces creosoted piles, for Division of Fortifications; 5,040 barrels paving brick, for Division of Terminal Construction; 50 boxes varnish, 6,662 pieces sewer pipe, 7,364 pieces yellow pine lumber for stock.

Zacapa, July 29, from New York, with seven crates carts, for Health Department; 51 boxes caustic soda, 210 pieces wagon wheels and axles, 120 packages paint, five bundles sandpaper, for stock.

Heredia, July 30, from New Orleans, with 250 sacks dairy feed, for stock; 21 reels cable, for Panama railroad; 82 pieces, 7,711 board feet, white oak lumber, 1,107 pieces, 30,058 board feet, yellow pine car lumber, for Mechanical Division.

Calamares, July 31, from New York, with 12 cases iron pipe fittings and brass valves, 65 kegs galvanized boat spikes, six reels wire rope, 354 packages structural steel, for stock; 32 packages structural material, 12 cases machinery, for Division of Fortifications; three cases telephone material, for Panama railroad; 15 crates sprinklers and sweepers, for Health Department; three pieces fender chains, for lock erection; three cases sheet copper, for permanent buildings.

Estate of W. G. Gillingham.

ANCON, C. Z., August 8, 1914.

The undersigned has been appointed administrator of the estate of William George Gillingham, deceased, and any claims against this estate, or any information which might aid in the recovery of money or property belonging to it, should be presented at once to John K. Baxter, Ancon, C. Z. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate.

JOHN K. BAXTER,

Administrator of estate of William George Gillingham, deceased.

MOVEMENTS OF OCEAN VESSELS.

The following is a list of sailings and scheduled arrivals of the Panama Railroad Steamship Line; of the Royal Mail Steam Packet Company; of the Hamburg-American Line, and the United Fruit Company's Line:

CANAL

RECORD

Volume VII.

ANCON, CANAL ZONE, WEDNESDAY, AUGUST 19, 1914.

No. 52.

The Canal Record

Official publication of The Panama Canal.

The Canal Record is published weekly free of charge, one copy each, to all employees of The Panama Canal and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications,

THE CANAL RECORD,
Ancon, Canal Zone,
Isthmus of Panama.

No communication either for publication or requesting information will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

CANAL OPENED TO TRAFFIC.

Message of Congratulation from the Secretary of War.

The following cable message has been received:

WASHINGTON, D. C.,
August 15, 1914.

COL. GEORGE W. GOETHALS,
Culebra, Canal Zone.

On behalf of the Government and the people of the United States I express to you and through you to all concerned in the achievement, the intense gratification and pride experienced today. By the successful passage of vessels through the Canal the dream of the centuries has become a reality. Its stupendous undertaking has been finally accomplished and a perpetual memorial to the genius and enterprise of our people has been created. The fully earned and deserved congratulations of a grateful people go out to you and your collaborators.

LINDLEY M. GARRISON,
Secretary of War.

Official Trip of the "Ancon."

Commercial traffic between the Atlantic and Pacific Oceans by way of The Panama Canal was inaugurated on Saturday, August 15, by the Government steamship *Ancon*, which made the trip from entrance to entrance in approximately nine hours, well within the previously estimated time for the passage of a ship through the Canal. The complete trip from the ship's berth at dock No. 9, Cristobal, to the end of the dredged channel, five miles out in the Bay of Panama, was made in approximately nine hours and 40 minutes. There were no unscheduled delays, and the handling of the vessel in the locks and through the channel sections characterized the entire operation as one of the smoothest up to that time.

The *Ancon* carried, as guests of the Secretary of War, about 200 people, the list inclu-

ding President Porras and his cabinet and other Panama Government officials, the members of the diplomatic corps and resident consuls-general, officers of the Tenth Infantry and Coast Artillery Corps, officials of The Panama Canal, and a few others. A special train was run, leaving Panama at 5 a. m., on Saturday, conveying the guests from the Pacific end direct to the dock at Cristobal.

The vessel left its berth at about 7.10 a. m., arrived in the Atlantic entrance at 7.30, and at Gatun Locks at 8 o'clock. It entered the lower lock at Gatun at the same hour and passed out of the upper lock on the water of Gatun Lake about one hour and a quarter later. The entrance to the Culebra Cut section at Gamboa was reached at about 11.15, and Cucaracha slide was passed at 12.20 p. m. Pedro Miguel Lock was reached at 12.56, and the vessel passed into Miraflores Lake at about 1.19. It entered Miraflores Lock at about 1.56, and passed out of the lower lock into the sea channel at 3.20. It arrived off Balboa docks at 4 o'clock, and reached the end of the dredged channel at 4.30. This completed the official trip, and the vessel returned to Balboa, anchoring in the channel at about 5.10 p. m. People gathered to witness the passage at various points along the route, and at Balboa as many as 2,000 were present.

The *Ancon* is practically a twin ship to the *Cristobal*. Both were formerly owned by the Boston Steamship Company, and at one time were in the trade between Puget Sound and the Orient under the names of the *Shawmut* and the *Tremont*. They were purchased under authority of Congress contained in the Sundry Civil Appropriation Act of May 27, 1909, and were turned over to the United States Government on January 1, 1909. At the same time their names were changed, the *Shawmut* to the *Ancon*, and the *Tremont* to the *Cristobal*. They are steel twin screw steamers of 9,606 gross and 6,195 net tons each, and were constructed by the Maryland Steel Company. They were originally purchased for use as cement carrying ships and were in that service, under the management of the Panama Railroad Company, during the period of lock construction. The *Ancon* on its first trip through the Canal carried a quantity of cargo for delivery at Balboa. It will return to the Atlantic side on Sunday, August 23, and will sail on its voyage to New York on Monday, August 24.

Commercial Vessels Using the Canal.

The following commercial vessels, which had been waiting at the terminals, were passed through the Canal on Sunday, August, 16:

Northward, Balboa to Cristobal—*Pleiades*, Luckenbach Steamship Company; *Pennsylvanian* and *Arizonian*, American-Hawaiian Steamship Company, en route from San Francisco to New York.

Southward, Cristobal to Balboa—*Missou-*

rian and *Nebraskan*, American-Hawaiian Steamship Company, and the yacht *Lasala*, a pleasure craft, en route from New York to Pacific ports.

The *Isabella* of the Luckenbach Steamship Company, and the *Admiral Dewey*, now owned by the Pacific Alaska Navigation Company, passed from Cristobal to Balboa, on their way from New York to San Francisco, on August 17 and 18, respectively.

The *Santa Catalina*, W. R. Grace and Company, and the *Kentuckian* and *Montanan*, American-Hawaiian Steamship Company, are now due at Balboa from Pacific ports and upon their arrival will pass directly through the Canal, for New York.

All of the abovenamed vessels are of American register.

Mr. Charles H. Boucher, representative of the American-Hawaiian Line has advised that his company expects to have a vessel pass through the Canal northbound every 72 hours, and in like manner, one southbound at the same intervals of time, which will mean the passage of one of this company's vessels through the Canal every 36 hours.

First Vessel of War Through the Canal.

The Peruvian torpedo destroyer *Teniente Rodriguez* arrived at Colon on Sunday, August 16, and was passed through the Canal on Tuesday, August 18, making it the first vessel of war to use the waterway. The destroyer has been on a trip up the Amazon River as far as Iquitos, stopping on the return trip at Para, Trinidad, and Curaçao. It is a vessel of 460 tons, built in France about two years ago for the Peruvian Government, and is manned by a crew of 54.

Panama Railroad Not a Cocarrier After November 15.

Following the opening of the Panama Canal to commerce, a 90-day notice, dating from August 15, will be served on all cocarriers of the Panama Railroad Company to the effect that the existing working arrangement whereby the railroad acts as an intermediate carrier will be terminated. After the expiration of the 90-day period the steamship lines to the Isthmus will be expected to make their own arrangements for the transfer of cargo, either at Cristobal or Balboa, as may be most advantageous, and the railroad will serve as a cocarrier only in case of emergency.

Heavy Fall of Rain Around Gatun.

An unusually heavy rain fell in the vicinity of Gatun on the afternoon of August 12. The maximum fall for one hour, 3.45 p. m. to 4.45 p. m., at Gatun, amounted to 4.72 inches. This hourly record has been exceeded but twice on the Isthmus since automatic records have been kept, namely, 5.86 inches in one hour at Balboa on June 2, 1906, and 4.90 inches at Colon on October 8, 1908. The heaviest fall on August 12 occurred at Agua Clara reservoir, amounting to seven inches in a little less than two hours.

Stations at which the precipitation exceeded three inches in the 24 hours ending at 8 a. m., August 13, were:

STATIONS.	RAINFALL. Inches.
Brazos Brook.....	3.50
Agua Clara.....	7.00
Gatun.....	6.11
Gatun evaporation station.....	6.83
Monte Lirio.....	5.75

The record at Gatun has been exceeded but twice since the station was established in 1905; 10.48 inches fell on December 3, 1906, and 6.70 inches on November 28-29, 1909.

A rise of but two and one-half feet was recorded in the Rio Chagres at Vigia, the heaviest rainfall being confined to the lower lake basin. Three of the 14 spillway gates at Gatun, kept open throughout the night, were sufficient to take care of the excess water supplied to Gatun Lake.

Heavy Rain Causes Washout on Panama Railroad.

The heavy rain that fell on the Atlantic side of the Isthmus on Wednesday afternoon, August 12, resulted in a washout and several mud slides on the Panama railroad, south of Gatun, temporarily interrupting traffic. The principal damage was caused by the washout, which occurred at a point about one and three-fourths miles south of Gatun station, and involved a section of track about 80 feet in length. The track bed was entirely undermined on both sides, and the material composing the embankment was carried into the lake, leaving a gap about 15 feet deep, with rails and ties hanging suspended in the air over the water. The two abutments of the track-span bridge at this point were also undermined, causing the towers to fall across the track and partly down the bank into the water. Some of the slides occurred about one and one-fourth miles south of Gatun, and others farther south, near the site of former Camp Totten. These covered the track in places to the depth of several feet, but were soon cleared away.

Passenger train No. 7, which leaves Colon at 4.25 p. m., was held at Gatun, and a boat special, which was due to follow it, was held at Mount Hope. The passengers on the special were subsequently taken to Gatun where they were transferred to No. 7. The latter train left Gatun at about 8.30 p. m., and proceeded as far as the washout where its passengers were transferred to No. 8 northbound. The passengers transferred from No. 8 arrived at Colon at about 9.20 p. m., and

those transferred to No. 8 arrived at Panama at about 10.45 p. m.

The construction of a track around the washout was begun at once, and at 3.35 a. m., on the following morning, the commissary train passed over it. The work of dumping rock and earth in rebuilding the embankment was started immediately, and is so far advanced as to permit the use of the main line track again.

Notice of Limitation of Time within which to File Claims with the Joint Land Commission.

To all claimants, attorneys for claimants, and to all persons interested in claims now pending, or to be presented to the Joint Land Commission appointed by the United States and the Republic of Panama—

You are hereby notified that the time fixed by the Governments of the United States and the Republic of Panama within which claims may be filed with the Joint Land Commission for damages which have accrued to any person, or persons, on account of the construction of the Panama Canal and under the Treaty between the United States and the Republic of Panama, under Rule 3, lately adopted and as amended by the two Governments, will expire on December 27, 1914.

By order of the Joint Land Commission.

WILLIAM TAYLOR, *Secretary.*

ANCON, C. Z., August 17, 1914.

Notice to Motorcyclists.

All motorcyclists, and those interested in the sport, are requested to attend a meeting to be held at Ancon lodge hall on Sunday, August 23, at 1.30 p. m., for the organization of an all-Isthmian motorcycle club; also, to arrange details for an endurance or sociability run to be held on Labor Day.

Vacancy in Joint Land Commission Filled.

A cable message has been received from the Secretary of State by the Hon. William Jennings Price, American Minister to Panama, announcing the appointment of Mr. R. Cornett as a member of the Joint Land Commission to succeed the late David Marks. The message further stated that Mr. Cornett was in Switzerland, but that he would return to the United States by the first available ship, and sail for the Isthmus as soon thereafter as possible.

The estates of these deceased employes of the Panama Canal or the Panama Railroad Company are now in process of settlement, and any claims against these estates, or any information which might lead to the finding of heirs or to the recovery of property, bank deposits, postal savings or postal money order deposits, or any other moneys due them, should be presented at once to the Administrator of Estates, Ancon, C. Z. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate. These names will be published but once.

JOHN K. BAXTER,
Administrator of Estates.

SOCIAL LIFE OF THE ZONE.

Sunday School Entertainment at Gatun.

The Gatun Union Sunday school entertained the children of the village at a party held in the Government chapel on Thursday evening, August 13. There was a program, the children of the Sunday school singing choruses and giving recitations, a special feature being the performance of feats of simple magic by Señor Magnocci of Mexico, and his wife. Games were played, and refreshments, consisting of ice cream, home made cookies, and home made candies, were served.

Camp Fire Girls' Outing.

The Cristobal Camp Fire Girls, recently organized, with Mrs. E. S. Waid as guardian, has a membership of 18. The meetings are held in the Cristobal clubhouse. Much interest is being displayed by the girls in the work of the society. The first outing was held on Wednesday, August 19, when the camp fire girls, accompanied by the guardian and other chaperones, canoed up Folks River to the village of Majagual, where a ceremonial meeting was held.

A Successful Bazaar.

The receipts of the bazaar held at Ancon hall by the Woman's Altar Guild of St. Luke's hospital chapel were found to be beyond the expectation of the workers, amounting to nearly \$96, exclusive of the \$21 earned by the junior auxiliary booth, which was independent of the guild booths. The regular meetings of the guild will be resumed on the first Tuesday in September. The receipts of the bazaar held by the Woman's Guild of Christ Church, Colon Beach, on Saturday afternoon and evening, August 8, amounted to about \$80.

Subscription List for War Sufferers.

At Christ Church, Colon Beach, the congregation of which is largely composed of West Indians, solemn processional litany was sung at evensong on Sunday evening, August 9 and 16. The rector of the church has circulated a subscription list for the collection of funds for St. John's Ambulance Society, an organization in London, England, which corresponds to the Red Cross Society. The money will be used for the relief of the sufferers from the war. The list was opened on Friday, August 14, and by evening of the following day the sums subscribed amounted to \$85, United States currency.

The annual parish outing of Christ Church will be held at Brazos Brook on Labor Day, September 7.

PERSONAL.

Hon. John Barrett of Washington, Director of the Pan-American Union, arrived on the Isthmus on the *Tenadores* on Friday, August 14, and was one of the party of invited guests that passed through the Canal on the *Ancon*. His nephew was a passenger on the *Ancon* from New York, and accompanied him on the trip through the Canal.

Mr. B. F. Harrah, who has charge of the legal affairs of The Panama Canal in Washington, arrived on the Isthmus on the *Ancon*, on Thursday, August 13, and was one of the invited guests on the official trip of that vessel through the Canal.

EXECUTIVE ORDER

Setting Aside Area of Land for Use and Purposes of a Radio Station.

The area of land hereinafter described, situated in the Canal Zone, is hereby set apart and assigned to the uses and purposes of a radio station and other naval purposes under the control of the Secretary of the Navy, but said area shall be subject to the civil jurisdiction of the Canal Zone authorities in conformity with the Panama Canal Act.

The said area is described, as follows:

DARIEN NAVAL RADIO STATION.

Beginning at a point A on the map, which is the point at which the water level of Gatun Lake meets a line parallel to the center line of the Panama railroad and 100 feet distant therefrom on the side toward the Canal, this meeting point being the first such point south of Station 1051 plus 70.3 of the Panama railroad, which latter point is marked by an iron rail monument noted P on the map; continuing thence on the line A, B, C, D, E, F, G, H, I, which line is at the water level of Gatun Lake, and is a meandered line extending southwesterly, south, and easterly, to point I, where the said water level intersects a traverse line shown on the map as of azimuth 250° 02'; thence for a distance of about 130 feet to point J, which is the intersection of two traverse lines indicated on the map as of azimuth 250° 02' and 1° 54', respectively; thence for a distance of 433.8 feet on an azimuth of 1° 54' to point K on the map, this point being the intersection of the 1° 54' azimuth line with the aforesaid parallel to and 100 feet distant from the center line of the Panama railroad, immediately south of Station 1074 plus 52 on the Panama railroad, which latter point is marked with an iron rail monument and is noted Q on the map; thence along the aforesaid line parallel to the Panama railroad to the point of beginning; in all, 87.5 acres, more or less.

The areas below lake level forming indentations into the general area of the site beyond lines B - C, C - D, E - F, G - H, and J - K, are included in the area hereby set aside;

all as shown by the blue print No. 3846, dated March 30, 1914, issued by the Department of Construction and Engineering, Isthmian Canal Commission, Office of the Assistant to the Chief Engineer.

WOODROW WILSON.

THE WHITE HOUSE,
July 30, 1914.

[No. 2006.]

EXECUTIVE ORDER

To Reorganize the Board of Health of the Canal Zone.

By virtue of the authority vested in me, I hereby establish the following Executive Order for the Canal Zone:

1. There is hereby established a Board of Health, under the jurisdiction of the Health Department, consisting of the following officials heretofore appointed by the Governor:

The Chief Health Officer, who shall be the chairman of the board, the General Inspector, the Chief Quarantine Officer, the chief of

laboratories, and the chief of the Division of Municipal Engineering.

Three members of the board shall constitute a quorum for the transaction of business and each member of the board shall be entitled to a vote, and, in the event of a tie, the presiding officer shall cast the deciding vote.

The Governor shall fix the time for the regular meetings of the board, and the Chief Health Officer may call special meetings of the board when he deems it necessary.

2. The Board of Health shall have power to make sanitary rules and regulations for the Canal Zone, not inconsistent with existing laws or Orders, which rules must be approved by the Governor before they become effective, and the board shall perform such other duties as may be assigned to it by the Chief Health Officer from time to time.

3. Sections 13, 14, 15, and 16 of Act 8 of the Isthmian Canal Commission, of September 2, 1904, are hereby repealed.

4. This Order shall take effect from and after this date.

WOODROW WILSON.

THE WHITE HOUSE,
August 6, 1914.

[No. 2014.]

EXECUTIVE ORDER

Prescribing the Duties of Constables.

By virtue of the authority vested in me, I hereby establish the following Order for the Canal Zone:

The constables of the magistrates' courts of the Canal Zone are hereby declared to be peace officers, with the powers and duties imposed by law upon such officers. They shall attend all sessions of the magistrate's court for the town and subdivision to which they may be assigned by the Governor of The Panama Canal; shall preserve order therein; shall receive and receipt for all moneys collected by them upon any process, or paid into or deposited with said magistrate's court as fees, fines, costs, forfeitures, or bail; and shall duly account therefor in accordance with rules and regulations to be prescribed by the Governor of The Panama Canal.

All laws or Orders, or parts thereof, in conflict with this Order are hereby repealed.

WOODROW WILSON.

THE WHITE HOUSE,
August 3, 1914.

[No. 2007.]

Agricultural Opportunities.

The Department of Agriculture of the State of New York has forwarded to the Isthmus a series of bulletins describing the agricultural opportunities and advantages in the State of New York. These bulletins are available for distribution and will be furnished employees of The Panama Canal and Panama Railroad Company upon application to the Office of the Governor.

Obituary.

Stephen B. Stuart, employed at the Miraflores pump station in the Division of Municipal Engineering, died on Wednesday, August 12, of organic disease of the heart. He was 34 years of age, unmarried, and had been on the Isthmus since May 9, 1907. His mother resides at No. 461 Humboldt street, Buffalo, N. Y. The body will be shipped to the United States on August 22, on the *Allianca*.

ALONG COAST AND CHANNEL

Information for Navigators Bound for the Atlantic Terminal Ports of The Panama Canal.

The following sailing directions have been prepared by the Superintendent of Canal Transportation, for the benefit of navigators who make Colon or Cristobal ports of call, or who enter the Canal from the Atlantic side. A similar article on the precautions to be observed at the Pacific end will follow shortly:

Bearings—The bearings given in these sailing directions are true; for navigational purposes the variation of the compass in the vicinity of the Panama Canal can be taken at 4° 25' easterly, in 1914. Vessels bound to Colon from the northward and eastward will make Isla Grande light, off Manzanillo Point, and then Toro Point light at the west entrance to Limon Bay, while those from the westward will make Toro Point light only.

Isla Grande light—Isla Grande light is on an island of the same name, off Manzanillo Point. It is shown from a white cylindrical tower, at an elevation of 305 feet, and flashes red and white alternately every five seconds; it is visible 24 miles. The island is steep to the northward and eastward, and is connected to Tambor Island to the northward by a line of reefs, some of which are sunken and some project three or four feet above water. Tambor Island, from a northeasterly direction, looks like an inverted dishpan, and is higher at its northern than at its southern end. It may be approached by the largest vessels, though there should be no occasion to do so; there is always a confused sea and swirling current in its vicinity.

Manzanillo Point—Manzanillo Point constitutes the northern extremity of the coast of the Republic of Panama, and is the termination of a ridge that runs along the seaward side of Porto Bello promontory. Immediately south of it there is an extremely steep point, the seaward face of which is nearly vertical. South and west of Manzanillo Point is Cerro Pavo, a conical peak with a shoulder on its west side, about one-third of the way down the peak. Cerro Pavo is a little east of Puerto Garrote, which forms a break in the ridge above mentioned. West of Puerto Garrote the range continues in the more elevated land of Porto Bello promontory, the highest point of which is Cerro Vigia, which can probably be seen at a great distance in nearly all weathers. Cerro Pavo and Cerro Vigia, in 1914, were marked by lone trees, with a thin feathery foliage.

Farallón Sucio—Farallón Sucio is the name given to the northernmost of a cluster of five small rugged rocks, which occupy a space of about one-fourth of a mile east and west. It is steep to, but from the easternmost rock, a foul ledge extends 300 yards to the south-eastward. The northernmost islet lies to the westward of Tambor Island, distant about four miles. These rocks from a distance are blended and appear as one island, and they are remarkable for their barren whiteness, in contrast with the Duarte islets, or the mainland, which are dark. This aspect makes them an excellent landmark from all directions.

Duarte Islets—The Duarte islets are four in number, extending NNW and SSE for a distance of three-fourths of a mile. They are close to the coast, about four miles to the southwestward of Farallón Sucio, and three miles to the northeastward of the north entrance to Porto Bello.

Salmedina Bank—Salmedina Bank lies off

the north entrance to Porto Bello, distant about one mile, and is a dangerous reef.

Navigation around Manzanillo Point to Colon—In general, the navigation from Manzanillo Point, around the promontory, is simple if a good lookout be kept, as all of the dangers, except one or two between the Duarte islets and Salmedina Bank, break in nearly all weathers, but it is a safe rule to give this part of the coast a berth of from two to four miles outside of all visible islands and land during the day, and five miles at night; this precaution also applies to the coast until Colon is reached.

Coast—From seaward, the coast between Manzanillo Point and Colon has the appearance of being mountainous and well wooded, though in places there is low land along the shore. It is sometimes difficult to distinguish the contour of the mountains, owing to the mists and low hanging clouds, which frequently spread over the land.

Currents—The course from Farallón Sucio to the seaward end of the west breakwater is $224^{\circ} 30'$ true. The currents over this course are extremely variable, especially during the wet season. In 1914, the *U. S. S. Hannibal*, at a speed of seven knots, made several runs over it, and found that the currents varied sufficiently to make a difference of about two points in the course made good. With a westerly wind, the current runs parallel to the shore at Colon, and, therefore, is on the starboard bow of a vessel bound from Farallón Sucio to Colon, and will set it inshore an amount depending upon its speed, whereas steaming in the opposite direction would have little effect on it, as at first it would set the vessel inshore, and then offshore, the current changing as Porto Bello is approached from the west.

With a west wind the current between Salmedina Bank and Isla Grande runs about northeast. With a northeast wind, the current is less in amount, and not so variable. A west wind generally brings rain, so that the rivers are flooded, and driftwood appears along the shore, sometimes 30 to 50 miles out at sea. Therefore, if, while approaching Colon, driftwood in large quantities be seen, it is generally an indication that the winds have been westerly, and that the current is running to the northward and eastward. Tide rips are often observed in the vicinity of Farallón Sucio and Isla Grande, and should serve as a warning of existing currents.

Soundings—The soundings between Isla Grande and the entrance to Limon Bay are not regular, but are variable, and should not be depended upon for a fix, unless the changes compared with the chart are as shown by the reckoning.

It would be well to steer for a point two and one-half miles due north of the entrance between the Colon Harbor breakwaters, until Toro Point light bears 205° (SSW $\frac{1}{4}$ W), and then change course to south, when the range lights at Gatun, which mark the entrance between the breakwaters, as well as the axis of the dredged channel of the Canal, are in line.

If it be thick, or at night, or if any doubt exists as to position, or if the ends of the breakwaters or the lights that mark them cannot be readily distinguished, a vessel should stop when the 10-fathom curve is reached, or when Toro Point light bears 220° , and not bring it to the westward of this bearing.

LIGHTS.

The following lights will be maintained, established, or discontinued in Colon Harbor, depending upon the condition and stage of the work in connection with harbor improvements:

Toro Point light—On Toro Point, west entrance to Colon and Cristobal Harbors, at the inshore end of the west breakwater, cylindrical structure, upper two-thirds white and the lower one-third red, elevation 103 feet, a white light showing a flash of five seconds every 30 seconds, visible 16 miles. The light has a background of deep green foliage, with a coconut grove in the immediate vicinity, and is unmistakable from seaward.

West breakwater light—At the seaward or northeast end of the west breakwater, in a bight immediately behind the elbow on the inshore side, a white cylindrical shaft on a square pedestal, elevation 30 feet, light red, making a double flash in one second and then eclipsed for one second, visible eight miles.

East breakwater light—This breakwater is now in course of construction and upon its completion a similar structure will be erected to that on the west breakwater, carrying a white light with the same characteristics. The distance between these lights will be about three-eighths of a mile, and the entrance into the harbor and the dredged channel of the Canal will be halfway between them.

East breakwater temporary light—During the course of construction of the east breakwater, a gas buoy showing a flashing white light, visible one second, eclipsed two seconds, will be moored off the seaward end (NW) of the breakwater. It will be moved from time to time as the work progresses, and will be discontinued upon the completion of the breakwater and the erection of the permanent light above referred to.

Gatun range lights—Situated in the vicinity and to the eastward of Gatun Locks. The rear tower is in the town of Gatun, near the crest of the ridge, a little below and to the eastward of a conspicuous black water tank, on the sky line, which makes an excellent landmark. The front range tower is just to the westward of New Gatun, abreast of and to eastward of the northern extremity of the approach wall of Gatun Locks. Both towers are white, cylindrical, and show white electric lights; the front rangelight is fixed, the rear range flashing and showing two flashes per second. The rear light is elevated 155 feet, and the front light 93 feet; they are both visible 15 miles. These lights mark the center of the opening between the breakwaters and the axis of the dredged channel of the Canal, from the seaward entrance to beacons Nos. 3 and 4, which are situated at the first angle or bend of the Canal, about one mile below Gatun Locks.

Dredged channel lights and beacons—The dredged channel from the seaward entrance, Atlantic end, to Gatun, is marked by gas and spar buoys, and by electric lighted beacons. The buoys and beacons are in pairs. The buoys on the starboard hand on entering, on the western edge of the dredged channel, are painted red; those on the port hand are painted black, but on account of the numerous birds which continually light on them and leave their droppings, most of the buoys, especially those toward the upper end of the bay, are more apt to be white than their proper color. The beacons on both sides, throughout the Canal, are painted white, but their lights are red or white, depending upon the side of the

channel on which they may be situated, in accordance with the system of lighting the buoys.

The red gas buoys on the starboard hand show a red light, one-half second lighted, one second eclipsed; the black gas buoys show white lights with the same characteristics as the red. The four electric beacons between the shore line at the southern end of the bay, and Gatun, show fixed red lights on the starboard hand, and fixed white on the port.

The first pair of black and red gas buoys, Nos. 1 and 2, will be established on their respective sides of the dredged channel at a point about seven-eighths of a mile inside of the entrance between the breakwaters. The second pair of gas buoys, Nos. 3 and 4, will be established on their respective sides of the main dredged channel, immediately to the southward of the entrance of the dredged channel leading up to the Cristobal piers, and distant about one and one-half miles south of the first pair.

The third pair of gas buoys, Nos. 7 and 8, will be off Mindi Point, Teller's Island, to the westward of Broken Reef. A pair of spar buoys, Nos. 5 and 6, will be established about halfway between the second and third pairs of gas buoys, namely, between the pair numbered 3 and 4, and the pair numbered 7 and 8.

Between gas buoys Nos. 7 and 8, and beacons Nos. 1 and 2, there are two pairs of spar buoys, spaced equidistantly, and numbered, respectively, 9 and 10, and 11 and 12.

Buoys Nos. 1 and 2 are situated close to the point where the dredged channel pierces the shore line at the southern end of the bay, and Nos. 3 and 4, at the first bend of the Canal, where the old French canal intersects it, about one mile to the northward and below Gatun Locks.

All lighted buoys are surmounted by a steel framework, about 12 feet high, which, with the lantern, gives a focal plane of 15 feet, and are visible five miles. The beacons are erected on shore, on the banks of the Canal, and consist of a white rectangular structure on a square base, carrying a vertical shaft, the light being elevated at an altitude of 15 feet.

West breakwater lighted buoy—At present, a gas buoy painted red and showing a flashing white light is maintained immediately off the seaward end of Toro Point breakwater, and will continue to be so maintained until the light structure, now in course of erection at the seaward end, shall have been completed. This buoy will be discontinued about September 1.

Twenty-two foot shoal gas buoy—A black gas buoy showing a flashing white light is established on the western side of the 22-foot shoal, which lies about one mile to the northward of Manzanillo Point, Colon Harbor, and will be maintained until the east breakwater and light shall have been completed. Manzanillo Point, Colon Harbor, should not be confused with the other point of the same name, hereinbefore mentioned as in the vicinity of Isla Grande light. They are about 28 miles apart.

Cristobal Mole gas buoy—A black buoy showing a fixed white light, visible two miles, has been established about 930 feet to the westward of Cristobal Mole, and vessels are warned not to pass between it and the mole.

Cristobal dredged channel—The southern side of the Cristobal dredged channel, and the western side of the same channel, which bends to the southward in the direction of Mount Hope, is marked by a number of red buoys. These

buoys are subject to change, owing to improvements which are being made in their vicinity, but should always be left on the starboard hand when entering Cristobal, or the old French canal channel.

Construction marks—Near the southern end of Limon Bay, near the edges of the dredged channel, a number of buoys and dolphins have been left, all of which were for construction purposes. These should not be confused with the buoys which are established as aids to navigation to mark the dredged channel.

Dumping ground buoy—A white buoy, which is shown on some of the charts, and which was established to mark the old French dumping ground in the western part of the bay, opposite Colon, will be discontinued when the dredging operations to remove this shoal shall have been completed.

Features—The dredged channel of the Canal, which is marked by buoys and beacons hereinafter mentioned, begins about one mile inside the breakwaters where the chart shows 41 feet depth at mean low water, and runs due north and south from the entrance to beacons Nos. 3 and 4, a distance somewhat less than five miles. The channel into the Cristobal docks leaves the main channel at approximately right angles, abreast Cristobal Point; it is 600 feet wide, and will be dredged to a depth of 41 feet, as will be the slips in and around the new piers. With the exception of the 22-foot shoal to the northward of Manzanillo Point, and the old French dumping ground, which is being dredged to the average depth around it, the entire bay is free from obstructions, and there is a gradual and uniform rise from the 10-fathom curve outside of the breakwaters to the head of the bay. The locality, however, to the northward and eastward of Manzanillo Island, on which Colon is situated, should be avoided, and vessels drawing 30 feet of water should anchor inside the west breakwater, and northward of a line joining Manzanillo Point (Colon) and Toro Point light, for the reason that until the east breakwater shall have been completed, a heavy swell occasionally sets into the harbor and necessitates a depth of at least six feet greater than the draft of the vessel, for an anchorage berth, to prevent the vessel striking bottom.

Anchorage—It is believed that upon the completion of the east breakwater (probably 1916), this swell will no longer be such as to cause danger to vessels. Vessels of lighter draft may anchor anywhere in the bay to the westward of the dredged channel, where the chart shows sufficient water. Anchorage to the eastward of the dredged channel is prohibited, but, provided the weather permits, there is no reason why vessels should not anchor outside of the breakwaters, if occasion requires.

Bottom—The bottom, in general, offers good holding ground, particularly inside of the breakwaters. The southern end of the bay terminates in very shallow water for a distance of a mile or more from shore, with the bottom muddy and sticky. There seems to be evidence of shoaling in this locality, and the shore line is making farther out into the bay; the dredged channel in this vicinity is showing signs of silting, and, as the wind blows directly into the bay, this part of it is generally rough, and not infrequently breakers extend for quite a distance from shore, making it unsafe for small boats or launches. The silting of the channel is kept in check by dredging.

Manzanillo Bay—Manzanillo Bay, which

is practically a part of Limon Bay, is to the eastward of Colon. It is an unimportant body of water, with extensive coral reefs skirting its shores, and is not used by deep water craft, through small boats sometimes find shelter in the upper part of it.

Breakwaters—It is assumed that the two breakwaters will fully protect the harbor in any weather, and afford ample and safe anchorage room for vessels using the Canal and the Atlantic terminal ports. The west breakwater has been completed, and extends from Toro Point north 58° east, for a distance of one and seven-eighths miles, terminating in an elbow which bends to the south and east, in the bight of which is situated the west breakwater light. The east breakwater, now in course of construction, does not connect with land, but starts over one mile off-shore from Coco Solo Point, and runs 294° true (N 68° W), for a distance of slightly over one mile, until its seaward end is flush with that of the west breakwater, when it bends to the south and west and forms a short elbow like the west breakwater, in the bight of which will be erected a similar beacon to that on the west breakwater.

General directions—There are no difficulties for vessels entering Limon Bay day or night, provided they keep on the Gatun range until the ends of the breakwaters have been passed. Owing to the fact that the light at the seaward end of the Toro Point breakwater is built in an elbow, and that, therefore, part of the breakwater lies between the light and the channel, vessels entering at night should give the light and breakwater a wide berth, at least 250 yards.

When the Gatun lights have been picked up and brought in range, bearing south, a vessel should proceed at slow, or half speed, keeping the lights in range, and passing halfway between the breakwater lights, noting at the same time that the Gatun range lights are kept in the middle of the space between the red and white flashing buoys and the fixed beacons, which mark the dredged channel, and which will naturally show in perspective toward the foot of the bay.

Pilots—All vessels entering the harbor will be boarded by a pilot. Whether or not a fee will be collected will depend upon the subsequent movement of the vessel. The pilot will give the necessary information in regard to anchoring, mooring, probable time of entering the Canal, and other matters of interest or importance. If there be no pilot aboard, a vessel should anchor under the west breakwater, and await one. Rules and regulations governing pilotage were published in THE CANAL RECORD of August 5, 1914.

Quarantine—The quarantine laws and restrictions are very rigid, and no communication will be allowed with the shore until *pratique* has been granted. The quarantine officer will board all vessels immediately upon their arrival, provided it be in the daytime.

Office of the captain of the port—The office of the captain of the port is now in the Panama railroad freight building, near the Royal Mail dock, Colon; but it is to be removed to a new building in Cristobal, at the head of the slip between Piers 8 and 9, in the near future. The new building will contain the offices of the Canal authorities that will handle shipping affairs, including the captain of the port, measurers, customs, collector, and Panama railroad; and it is probable that many of the steamship agencies will be in the same vicinity.

The captain of the port will furnish information upon application in writing, or otherwise, relating to the Canal, harbor, navigation, weather, lights, tolls, measurements, supplies, provisions, fuel, or other matters of interest.

Manzanillo Point signal station—Manzanillo Point is at the northwest point of Colon, and is readily distinguishable by the Hotel Washington, a large concrete building, with its seaward face to the northward. The building is supported by a series of arches, and the upper stories present a number of dark square windows and spaces; there is a low, round cupola on its western end, which is used for the present as a signal station, with which ships can exchange signals. All arrivals are reported from this station as soon as a vessel is sighted.

Light discontinued—The fixed white light, which was formerly maintained on an open framework structure, 60 feet high, at this point, has been discontinued, and the structure demolished.

Anchoring vessels—Vessels are forbidden under any conditions to anchor on the ranges, or in the axis of the Canal, and, as previously stated, should invariably anchor to the westward of it.

Tides—Tides can be practically neglected in Colon Harbor from a navigational standpoint; the mean rise and fall is about one foot, and the greatest variation about two feet. The height is more affected by the direction of the wind than by any other factor.

Weather—The seasons are divided into the wet and dry; the dry begins about January, and lasts until May; the wet during the remainder of the year.

Climate—The climate is characterized by a small range in temperature, moderate wind movement, excessive humidity, and abundant rainfall.

Rainfall—The average yearly rainfall at Colon is about 130 inches; February is the month of lightest, and November, the month of greatest rainfall. Over 50 per cent of the precipitation occurs between 6 a. m. and 6 p. m.; the percentage of night rains is low early in the rainy season, and heavier during November and December.

Temperature—There is but little variation in temperature throughout the year, the mean being about 80 Fahrenheit. April is usually the month of highest mean temperature, and November the lowest. The diurnal range is from 6° Fahrenheit, to 10° Fahrenheit, being smaller in the dry season.

Wind movement—Steady, fresh trade winds prevail during the dry season, generally between north and northeast, with an average velocity of about 15 miles an hour, but frequently exceeding 20 miles an hour for a period of 24 consecutive hours, or longer. The rainy season winds are variable and have a lower velocity, coming generally from the southeastward, and averaging about eight miles an hour. The maximum velocity is frequently as high as during the dry season, but usually continues for but a few minutes, during the passage of local rain squalls, and, therefore, do not cause any sea or danger to navigation; they are generally strongest about 1 or 2 p. m., and lightest about 5 to 7 a. m.

Northers—The so-called "Northers" occasionally reach as far south as Colon during the season from October or November to April, inclusive, the season of the northeasterly trade winds. They are strong steady blows,

from northeast to northwest, from an anti-cyclonic area of high pressure to the northward, toward the equatorial belt of low pressure, and are generally from about north northwest when at their worst. There is no marked indication of their approach, barometric, or otherwise; they last from one to five days, but their maximum strength rarely exceed 24 hours duration, when the wind may reach a velocity of 30 to 40 miles per hour; they hardly average one a year. It is not so much the wind as the heavy swell and seas that accompany these blows, that formerly did so much damage to the wharves and shipping in Colon Harbor. The Toro Point breakwater, now completed, and the east breakwater, now under construction, should afford ample protection to vessels of any class, at all times, anchored in the harbor or moored to the wharves.

Cloudiness and fog.—The cloudiness is greater during the rainy season, and ordinarily greater during the day than at night. Fogs are rare, and hardly average more than four or five a year; they are of short duration.

Barometer.—Barometric changes are ordinarily too slight to be of use in forecasting weather, and may, therefore, be neglected.

Rainfall, August 1 to August 15, 1914, Inclusive.

Estate of W. G. Gillingham.

ANCON, C. Z., August, 8, 1915.

The undersigned has been appointed administrator of the estate of William George Gillingham, deceased, and any claims against this estate, or any information which might aid in the recovery of money or property belonging to it, should be presented at once to John K. Baxter, Ancon, C. Z. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate.

JOHN K. BAXTER,
Administrator of estate of William George Gillingham, deceased.

OFFICIAL CIRCULARS.

Executive Order.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 17, 1914.

CIRCULAR No. 601-13:

CIVIL SERVICE RULE GOVERNING TRANSFERS.
The extract from an Executive Order quoted below is published for the information of all concerned.

GEO. W. GOETHALS,
Governor.

AMENDING THE CIVIL SERVICE RULES.

The following sections are hereby added to Rule X:

12. No person appointed in the Isthmian Canal Service otherwise than through competitive examination, or by transfer or promotion from a competitive position, shall be transferred to a competitive position, unless he was classified by the Executive Order of November 15, 1904, in a position which was then and is at the time of the proposed transfer in the competitive service; *Provided*, that artisans who are citizens of the United States, who have rendered one year's satisfactory service on the Isthmus of Panama, and who may be recommended, upon discharge, for transfer, may be transferred without examination within three years to corresponding classified positions in or under any department or office, subject to the provisions of these rules.

The foregoing provisions are now contained in Executive Orders and are made a part of the Civil Service Rules upon recommendation of the Civil Service Commission that they may be more easily referred to and greater publicity given to their existence.

WOODROW WILSON.

THE WHITE HOUSE,
June 15, 1914.

Act of Congress.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., July 18, 1914.

CIRCULAR No. 600-7:

EXTENDING APPROPRIATIONS FOR FIRST HALF OF JULY, 1914.

The extract from an Act of Congress quoted below is published for the information of all concerned.

GEO. W. GOETHALS,
Governor.

Joint Resolution extending appropriations for the necessary operations of the Government and of the District of Columbia under certain contingencies.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That all appropriations for the necessary operations of the Government, and of the District of Columbia, which shall remain unprovided for on the 30th day of June, 1914, are continued and made available for and during the first half of the month of July, 1914, unless the regular appropriations provided therefor in bills now pending in Congress shall have been previously made for the service of the fiscal year ending June 30, 1915; and a sufficient amount is appropriated, out of any money in the Treasury not otherwise appropriated, to carry on the same; *Provided*, that no greater amount shall be expended for such operations than as the sum of one twenty-fourth of the appropriations made for the fiscal year 1914 bears to the whole of the appropriations of said fiscal year; *Provided further*, that the total expenditures for the whole of the fiscal year 1915 under the several appropriations hereby continued, and under the several appropriation bills now pending, shall not exceed in the aggregate the amounts finally appropriated therefor in the several bills now pending, except in cases where a change is made in the annual, monthly, or per diem compensation, or in the numbers of officers, clerks, or other persons authorized to be employed by the several appropriations hereby continued, in which cases, the amounts authorized to be expended shall equal one twenty-fourth of the appropriations for the fiscal year 1914, and twenty-three twenty-fourths of the appropriations contained in the several bills now pending when the same shall have been finally passed, unless the salary or compensation of any office shall be increased or diminished without changing the grade or the duties thereof, in which case, such salary or compensation shall relate to the entire fiscal year and run from the beginning thereof * * *.

Approved, June 30, 1914.

Steamship "Cristobal" Out of Service.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., August 14, 1914.
HEADS OF DEPARTMENTS AND DIVISIONS:
The steamship *Cristobal* will be taken out of service

on August 16 for an indefinite period. All requests for transportation issued to date for the September sailing of the *Cristobal*, will be automatically transferred to the steamship *Panama*, sailing September 9, unless advised at once to the contrary.

In view of the large number of passengers on north-bound Panama railroad steamships at this time, employees are urged to submit their requests for transportation as soon as possible and arrange their reservations immediately upon receipt of same.

GEO. W. GOETHALS,
Governor.

Drafts of Executive Orders.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., August 13, 1914.
HEADS OF DEPARTMENTS AND DIVISIONS:

In order that there may be complete uniformity in the preparation of Executive Orders to be submitted for the President's signature, I desire that all drafts of such Orders be submitted to the Special Attorney, who will prepare the final draft and forward same for my consideration, together with such explanatory memoranda as may be deemed necessary.

GEO. W. GOETHALS,
Governor.

Notice to Mariners.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., August 8, 1914.

CIRCULAR No. 643-4:

WEST BREAKWATER LIGHT, LIMON BAY, COLON AND CRISTOBAL HARBOR.

1. On or about August 15, 1914, the red lights which have been shown on a pole at the seaward end of the west breakwater, Limon Bay, Colon harbor, will be discontinued, and a red light, flashing twice in one second, and then eclipsed one second, will be thrown from a permanent concrete structure with a square base cylindrical column, at a height of 30 feet, visible eight miles.

2. The structure is erected in the elbow of the breakwater, on the inshore side, and vessels should give it a berth of at least 250 yards when entering. This light will be known as the west breakwater light.

3. On September 1, 1914, the gas buoy which shows a flashing white light, off the seaward end of the west breakwater, will be discontinued.

GEO. W. GOETHALS,
Governor.

Appointments.

THE PANAMA CANAL,
EXECUTIVE OFFICE,
CULEBRA, C. Z., May 6, 1914.

CIRCULAR No. 661-4 (Corrected):

1. The following appointments are hereby made:

BOARD OF LOCAL INSPECTORS.

Commander Douglass E. Dismukes, Chairman.
Lieut.-Commander H. V. Butler, member.
Mr. J. MacFarlane, member.

BOARD OF ADMEASUREMENT.

Capt. Hugh Rodman, U. S. N., Chairman.
Commander Douglass E. Dismukes, member.
Lieut.-Commander H. V. Butler, member.

INSPECTORS OF BOILERS AND HULLS.

Commander Dismukes, Inspector of Boilers.
Lieut.-Commander Butler, Inspector of Hulls.

GEO. W. GOETHALS,
Governor.

Requests for Time Vouchers.

THE PANAMA CANAL,
OFFICE OF THE AUDITOR,
EMPIRE, C. Z., July 30, 1914.

To ALL CONCERNED:

Upon the termination of service of an employe, or when entering upon leave of absence, notation to that effect must be made in the time book and "Request for time voucher" shall be furnished by person in charge to the chief timekeeper, Balboa Heights.

Care should be given in making time vouchers, as they must show in all cases time shown in the time book for the current period. For instance, a request issued for an employe who has worked from the 5th to the 7th of the month should read, "Time for period 5-7, 24 hours," if an hourly man, or "Time for period 5-7, three days," if a monthly man, providing work has been performed for this full period of time. In the case of a monthly man who has not worked the full time for the current period, the absent dates must be shown on the time voucher request.

H. A. A. SMITH,
Auditor, The Panama Canal.

FOUND—One watch fob. Owner can have same upon proper identification, at police and fire headquarters, Ancon, C. Z.

COMMISSARY DEPARTMENT.

Examinations by Board of Local Inspectors.

THE PANAMA CANAL,

BOARD OF LOCAL INSPECTORS.

ANCON, C. Z., August 17, 1914.

The Board of Local Inspectors will conduct examinations at the Administration Building, Ancon, on Wednesday, August 26, 1914, beginning promptly at 2 p. m., for persons desiring the following classes of licenses: Pilots, masters, mates, marine engineers, chauffeurs, and navigators of motor boats. All applicants for license must procure from the office of the Board, Ancon, forms of application and information respecting the filling out of same, not later than the day previous to the examination. In addition, all persons desiring chauffeurs' licenses must provide themselves with automobiles with which to demonstrate their ability to properly operate the same. The demonstration test for applicants for chauffeurs' licenses will be given on Tuesday, the day preceding the regular examination, at 2 p. m., at the Administration Building, Ancon, on Wednesday, the day of the regular examination; for out-of-town applicants, at 2 p. m., at the Administration Building, Ancon.

Applicants for licenses as navigators of motor boats will be required to give a demonstration of their ability to operate such boats, and will be obliged to provide themselves with boats for this purpose. The test will be given on Thursday, the day following the written examination, as follows: At Cristobal, upon arrangement with the captain of the port; at Gamboa, at 8 a. m.; and at Balboa, at 2 p. m. Applicants for the test at Cristobal or Balboa should present themselves at the office of the captain of the port; at Gamboa, the deputy inspector will be present at the Panama railroad station at the hour abovementioned.

By direction of the chairman of the board.

W. H. HYDE,
Clerk of the Board.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending August 29, 1914:

CANAL CLUBHOUSES.

Activities of the Young Men's Christian Association.

GENERAL.

Through the courtesy of a Panama paper a news service has been established whereby important cables concerning the European war are furnished the clubhouses during the afternoon and evening until 10 o'clock. The news is procured by one of the secretaries and relayed to various clubhouses along the line.

The following is taken from the statistical report for the month of July: Total membership, 1,785; total number of bowling games, 9,380; average per day, 347; total number of pool games, 21,049; average per day, 779; total number tournament players, 138; total income from refreshment parlors, \$4,031.40; different men using gymnasiums, 118; number enrolled in chess and checker clubs, 40; number of local entertainments, 42; total attendance, 8,479; total number enrolled in educational classes, 49.

LABOR DAY ATHLETIC MEET.

An athletic and aquatic meet will be held on Labor Day, September 7. The field events will take place at Corozal and the aquatic events at Balboa. The meet will be in charge of a games committee, composed of Messrs. Russell, Kjellander, Dwell, Woolworth, and Dickson. The following events will be held:

TRACK AND FIELD EVENTS.

One hundred-yard dash, 220-yard dash, 440-yard dash, 880-yard dash, one mile run, one mile relay (four men), running high jump, running broad jump, pole vault, 12-pound shot put, 120-yard high hurdles, 220-yard low hurdles.

AQUATIC EVENTS.

Four hundred and forty-yard swim, 880-yard swim, back swim (50 yards), one mile swim, fancy diving, plunge for distance, one-half mile relay swim (four men).

Gold, silver, and bronze medals will be given as first, second, and third prizes, except in relay events in which each member of winning team receives a gold medal; there are no second and third prizes. A. A. U. rules will govern the contest. Entry blanks are in the hands of the printer, P. T. Woolworth of the Corozal Y. M. C. A. will act as clerk of course.

BALBOA.

R. Watson won the local checker tournament on Saturday evening.

Culebra defeated Balboa in a match checker game on Friday evening. The high score was made by Dr. Dunn of Culebra.

Special music, consisting of violin and piano, was furnished at the motion picture entertainment on Tuesday evening, August 11, by Messrs. Gray and Barker.

COROZAL.

High scores on the bowling alleys for the past week were, as follows: *Tenpins*—Boesen, 236, 217, 201; Davis, 216, 211; White, 210; Parkis, 208; Territtier, 203, 200; Edwards, 203. *Duckpins*—Thurst, 119, 103, 100; Ryan, 117; Davis, 109, 104; Gustavson, 105. The moving picture show this week takes place on Saturday evening, August 22.

On Thursday evening, August 20, there will be a recital by the Brazilian pianist, Señor Alcindo Barcellos. The Cristobal basketball team came to Corozal and played the local team on Saturday evening, August 15. The visitors won by a score of 25 to 16.

PEDRO MIGUEL.

The following program was given at the soldiers' farewell social, on Thursday evening, August 13: Selection, Tenth Infantry band; sketch, "Troubles of an Army cook," members of Company H; Black faced comedian and Dutch comedian, Privates Winfrey and Steffen; reading, "The family history," Corporal Wright; vocal solo in French, Private Theriault; Butt's manual drill, six members of Company H; vocal solo, Private Morosco; reading, "The Dutch version of Barbara Frietich," Corporal Wright; regulation Army bugle calls, Musicians Keigle and Gorr; reading, "Woodman, spare that tree," Corporal Wright; pie eating contest, soldiers; watermelon contest, soldiers; selection, Tenth Infantry band; refreshments. The winners in the pie eating contest were Privates Verellea and Strayner, and in the water melon contest Privates Verellea and Sergeant Dupre. Appropriately inscribed medals were presented to the winners. The ladies of Paraiso and Pedro Miguel furnished the sandwiches and home made cakes.

The high score on the bowling alleys during the past week, in duckpins, was made by Davis, 130; tenpins, Vandeburgh, 202.

Beginning August 15, and running for a month, a pool and billiard contest will be held. Pennants will be given to the one making the highest percentage in 20 games of 50 points each.

CULEBRA.

Mr. B. A. Armstrong, who has been secretary of the Culebra clubhouse since November 3, 1912, has

resigned. He sailed for the United States on August 16. The work of the local association will be looked after by the General Secretary during the next few weeks.

The work of taking down the schoolhouse has been begun, and motion pictures will be exhibited in the old time office in the second story of the administration building for the next few weeks. The other activities for the present will be continued as usual.

GATUN.

There was an attendance of about 150 at the song service on Sunday evening, August 16. Miss Maybelle James of Corozal sang Tosti's "Goodbye" and Mr. Wm. Booz of Cristobal sang "A perfect day." Miss James and Mr. Booz were also heard in a duet. Miss Goodhue of Cristobal was accompanist.

A farewell reception was given in honor of Companies F and G, Tenth Infantry, at the clubhouse on Saturday evening, August 15. The program was in two parts, the first was given in the gymnasium, and the second on the first floor.

Part 1—Selection by orchestra; manual of arms; bayonet drill; flag signaling; bayonet fencing; bugle calls; 20-yard dash; relay race; sack race; 3-legged race; pumpkin pie eating contest; flour ducking contest; baseball, Corozal vs. Gatun.

Part 2—Selection by orchestra; popular songs, Private Dempsey; song and dance, Private Leary; cornet solo, Musician Murphy; violin solo, Private Durham; story telling, Corporal Baker; march, Prochaska's orchestra; Kipling, Private McGee; comedy, Private Thompson; music and refreshments.

Professor Maguocci and wife will appear in a night of magic and motion pictures on Thursday evening, August 20.

Ladies' night will be opened in the bowling alleys on Friday, August 21.

J. Leitman of Gatun challenges any pool player on the Isthmus to a match game of pool. Send acceptances to the secretary, Y. M. C. A., Gatun, C. Z.

CRISTOBAL.

On Thursday night, August 13, Commander D. E. Dismukes addressed a crowded house, under the auspices of the discussion club, on the "Causes leading to the present war in Europe." He drew attention to the important part the navies are to take in the war, and gave it as his opinion that the victorious navy will decide the issue.

Twenty-one members of the boys' department spent Thursday, August 14, at Cruces. Through the kindness of Capt. C. A. Black, the boys were permitted to make the trip from Gamboa to Cruces on a claret. On returning to Gamboa, the boys had a swim in the Chagres River. Capt. MacPherson of the claret showed the boys every kindness.

A luncheon will be served to the men who took part in the indoor baseball league on Friday night, August 21. The basketball season and the field meet at Corozal on Labor Day will be discussed.

An indoor baseball team and basketball team from Corozal will play at Cristobal on Saturday night, August 22.

High duckpin scores for the week were: Sloan, 124, Henry, 105; Scheid, 102; Peterson, 100; Lucas, 100. High tenpin scores were Barte, 230; Bevington, 209; Collins, 204; Levy, 200.

Mr. Charles Cotton was awarded a box of cigars for rolling high average in the ragtime tournament in July.

Movements of Vessels at Port of Balboa.

The arrivals and departures of steamships at the port of Balboa during the week ending at noon, August 15, were, as follows:

Arrivals—August 8, *Quilpe*, from Guayaquil; August 11, *Oberon*, oil vessel, from Port San Luis; *Panama* from Colon; August 12, *Huasco*, from Valparaiso; *Pleides*, from San Francisco; *Pennsylvania*, from San Francisco; *Pachlea*, from Callao.

Departures—August 8, *Quito*, for Colombian ports; August 8, *San Joaquin*, to Port San Luis; August 10, *Huadaga*, to Callao; *Orduna*, to Guayaquil; August 11, *Guatemala*, to Guayaquil; *Panama*, to Colon; August 12, *Peru*, (P. M.) to San Francisco; August 13, *Lyra*, to San Francisco; August 14, *Oberon*, to Port San Luis.

Legal Notice.

United States of America } In the District Court.
Canal Zone.

The following named American citizens died intestate leaving personal property within the Canal Zone to the amount stated:

Nelson Wheeler \$ 28.99
George Wagner 179.09

The Administrator of Estates has filed a petition for the escheat of the abovenamed estates, in accordance with Section 779 of the Code of Civil Procedure.

Notice is hereby given to all heirs or creditors of the above estates to appear before this court in the court-house at Ancon, on September 26, 1914, at 9 o'clock, a. m., to establish their claims, or to show cause why the said estates should not escheat to the Government of the Canal Zone.

E. M. GOOLSBY,
Clerk of District Court.

Estate of Joseph Cavanaugh.

ANCON, C. Z., August 18, 1914.

The undersigned has been appointed administrator of the estate of Joseph Cavanaugh, deceased, and any claims against this estate, or any information which might aid in the recovery of money or property belonging to it, should be presented at once to E. Frederick Quimby, Ancon, C. Z. All claims should be itemized, sworn to before a notary public, or other public officer having a seal, and submitted in duplicate

E. FREDERICK QUIMBY,
Administrator of estate of Joseph Cavanaugh, deceased.
